Editor's Foreword	xi
Authors' Foreword	xxiii
1 Introduction: Past, Present and Future of the Global Population	I
Population: what is it?	I
Demography and human geography	4
From "Adam and Eve" to nine billion	6
Prognosis or projections?	9
Problems facing the rich and poor societies of our world	10
Growing global imbalances	13
2 The Global Population from Prehistoric to Early Modern Times: Between "Nature" and "Culture"	16
The prehistory of humankind	16
Evolution and proliferation of humanity: the past 130,000 years	22
The Neolithic Revolution	30
The first civilizations	34
First censuses	36
Global population in the ancient world	39
The Middle Ages: population starts to grow	44
A great leap forward – but not everywhere	46
Europe	48

3	The New Globalism: 1800 to 1950	54
	Growth and population distribution	55
	Social modernization and a shift in mortality	62
	The mortality crisis on the decline	64
	Fertility differences in Europe level off	67
	Asia and Africa	69
	Demographic transition: European innovation and global diffusion	71
	Newborns to “Quality Kids”	78
4	1950 to 2050: Peak and Slowdown of Global Population Growth	82
	Dynamics of growth	85
	Global decline in numbers of children	86
	Significant drops in fertility in Asia and Latin America	87
	High fertility in Africa	89
	Highly developed regions – low number of children	90
	Europe: the continent with the lowest number of children	92
	Delayed slowdown in growth	94
	Enhanced reproductive age – lower number of children	95
	Mortality is declining almost everywhere	97
	Reduced infant and child mortality	99
	Rising life expectancy	101
	From births and deaths to population growth	108
	Northern and Southern hemispheres: variable population growth	110
	A shift in the demographic balance	115
	Differences between the continents	116
	From a growing to a shrinking population?	119
	In sum: how many people have ever lived?	124

5	Spatial Mobility and International Migration	126
	Colonization and migration in the ancient world	126
	Germanic, Slavic, and Asiatic “tribal” migrations	129
	What became of the conquerors and conquered?	131
	The Modern Era: Europe’s colonial and demographic expansion	132
	Intra-European migration between the Industrial Revolution and the Great Depression	136
	Deportation, forced migration, and “ethnic cleansing”	137
	Decolonization and postcolonial migration	141
	Labor migration	143
	Political refugees and ethnically privileged migrants	146
	Irregular migration to Europe	148
	Elite migration – retirement migration	149
	Global migration in the 20th and early 21st centuries	150
	Migrants in traditional immigration countries	155
	Europe – the new immigration continent	159
	Europe and North America compared	162
	Prospects for the 21st century	164
6	Urbanization and Migration from Rural to Urban Areas	165
	The city in history	168
	Three stages of urban development	169
	Large cities are dependent on migrants	173
	Urbanization in developing and newly industrialized countries	178
	From the countryside to the urban world of the slums	180
	Global urbanization	182
	Megacities and global cities	184
	Incentives to migrate to the city	186

7	Demographic Politics, Family Planning, Reproductive Health	188
	Sexual education – a controversial issue	189
	Pro-natalist and anti-natalist policies	190
	For and against more children	192
	Global trend towards fewer children – <i>continuing disparities</i>	194
	Modernization and its and its consequences	197
	Family planning: demand and applied methods	198
	Demand for family planning	201
	Contraceptives and abortion	203
	Pregnancy termination and gender preferences	205
	Programs promoting family planning	207
	Additional demand for family planning	211
	And the results?	213
8	Health, Illness, and Death	216
	Most common diseases and causes of death	218
	A shift in the causes of death	221
	From “dying before one’s time” to a nursing risk	223
	Infectious diseases	225
	The HIV/AIDS epidemic	227
	Maternal mortality	231
	What can we do?	232
9	From a Growing to an Aging Population	235
	Demographic and biological aging	236
	Demographic aging	237
	Average age is rising globally	239
	Regional and continental age structure – <i>a time-staggered development</i>	240
	Childhood and early youth: a modern “invention”	242

People of working age	245
More elderly people	249
The very old	252
Active generation vs. young and old	254
10 Too Many People	257
Population and development	258
Empowerment of women	260
Poverty and hunger	261
Underdevelopment, lacking educational opportunities, underemployment	264
Global aging	266
Effects on the social security system	267
A paramount dilemma of the 21st century	268
Selected Online Resources and Web Links	273
Glossary	275
Bibliography	292
Appendix 1: World Population 2006	303
