An Introduction to the Physics of INTENSE CHARGED PARTICLE BEAMS

R. B. Miller
Sandia Laboratories
Albuquerque, New Mexico

PLENUM PRESS • NEW YORK AND LONDON

Contents

1. Introduction **1**

1.1. Background 1
1.2. Pulsed Power Technology 2
1.2.1. Marx Generators 4
1.2.2. Pulse-Forming Lines 6
1.2.3. Switching 12
1.2.4. Vacuum Diodes 18
1.3. Qualitative Behavior of Charged Particle Beams 19
1.3.1. Solenoidal Field Transport in Vacuum 22
1.3.2. Charge and Current Neutralization by a Background Plasma 24
1.4. The Macroscopic Fluid Description 26

2. Intense Electron and Ion Beam Generation **31**

2.1. Introduction 31
2.2. Electron Emission Processes 33
2.2.1. Thermionic Emission and Photoemission 33
2.2.2. Field Emission 34
2.2.3. Explosive Electron Emission 37
2.3. Electron Flow in High-Power Diodes 41
2.3.1. The Relativistic Planar Diode 42
2.3.2. Parapotential Flow 45
2.3.3. Foilless Diodes 50
2.4. Ion Flow in High-Power Diodes 54
2.4.1. Bipolar Space-Charge-Limited Flow 55
2.4.2. The Reflex Triode 57
2.4.3. Magnetically Insulated Ion Diodes 63
2.4.4. Time-Dependent Electron and Ion Flow in Pinched Electron Beam Diodes 67
2.5. Summary 70

3. Propagation of Intense Beams in Vacuum 77

3.1. Introduction 77
3.2. General Equations for Laminar Flow Equilibria 78
3.3. Space-Charge-Limiting Current 84
3.3.1. Thin Annular Beam in an Infinitely Long Drift Space 85
3.3.2. Infinite One-Dimensional Drift Space 87
3.3.3. Iterative Procedure for the Limiting Current in a Long Drift Space 88
3.3.4. Upper Bound for the Limiting Current in Arbitrary Geometry 90
3.3.5. Wave Spectrum for a Nonrelativistic Beam in a One-Dimensional Drift Space 92
3.4. Virtual Cathode Formation 97
3.4.1. Classical Static Theory 98
3.4.2. Prediction of Unstable Flow 100
3.4.3. Single Charge Sheet Model 100
3.4.4. Time-Dependent Virtual Cathode Behavior 103
3.5. Laminar Flow Equilibria of Unneutralized Relativistic Electron Beams 105
3.5.1. Relativistic Rigid Rotor Equilibrium 106
3.5.2. Relativistic Hollow Beam Equilibrium 107
3.5.3. General Laminar Flow Beam Equilibria 108
3.6. Electron-Neutralized Transport of Intense Ion Beams in Vacuum 116
3.6.1. Collinear Electron Neutralization 116
3.6.2. Transverse Electron Injection 118
3.7. Electrostatic Stability of Intense Relativistic Electron Beams 120
3.7.1. Stability of the Rigid Rotor Equilibrium 123
3.7.2. Stability of the Hollow Beam Equilibrium (Diocotron Instability) 126
3.7.3. An Electron–Electron Two-Stream Instability 129
3.8. Summary 132

4. Propagation of Intense Beams in Plasma 139

4.1. Introduction 139
4.2. Current Neutralization 140
4.3. Macroscopic Beam–Plasma Equilibria 148
4.3.1. Warm Fluid Equilibria with $B_0 = 0$. 149
4.3.2. Warm Fluid Equilibria in a Discharge Channel 151
4.3.3. Cold Fluid Equilibria with an Axial Magnetic Field 152
4.4. Macroscopic Beam–Plasma Instabilities 154
4.4.1. Resistive Hose Instability 155
4.4.2. Sausage Instability 164
4.5. Microscopic Instabilities 169

4.5.1. Stability of a Charge-Neutralized Electron Beam (Buneman Instability) 170
4.5.2. Electron Beam Stability in a Dense Plasma (Two-Stream and Cyclotron Instabilities) 171
4.5.3. Electromagnetic Filamentation (Weibel) Instability 177
4.6. Plasma Heating by Linear Relativistic Electron Beams 180
4.6.1. Return Current Interaction 182
4.6.2. Beam-Electron–Plasma-Electron Streaming Interaction 184
4.7. Summary 187

5. Propagation of Intense Beams through Neutral Gas 193

5.1. Introduction 193
5.2. Beam-Induced Neutral Gas Ionization Processes 194
5.2.1. Electron Impact Ionization 194
5.2.2. Electron Avalanche 195
5.2.3. Ion Ionization 196
5.3. Neutral Gas Transport for $I_b/I_l < 1$ 196
5.3.1. Low-Pressure Limit 196
5.3.2. Intermediate-Pressure Regime 197
5.3.3. High-Energy Beam Transport in the High-Pressure Regime 198
5.4. Neutral Gas Transport for $I_l \lesssim I_b \lesssim I_A$ 202
5.4.1. Low-Pressure Regime 202
5.4.2. Intermediate-Pressure Regime 205
5.4.3. High-Pressure Regime 208
5.5. Neutral Gas Transport for $I_b > I_A$ 210
5.6. Summary 210

6. High-Power Sources of Coherent Radiation 213

6.1. The Relativistic Microwave Magnetron 214
6.1.1. Preoscillation Phenomena 216
6.1.2. Anode Circuits 219
6.1.3. Interaction of the Electron Space Charge and the rf Fields 227
6.2. The Electron Cyclotron Maser (ECM) 236
6.2.1. Physical Mechanism of the Electron Cyclotron Maser 238
6.2.2. Linear Theory of the ECM Mechanism 239
6.2.3. Nonlinear Saturation Mechanisms for the ECM Instability 246
6.3. The Free Electron Laser (FEL) 248
6.3.1. Physical Mechanism of the Free Electron Laser 249
6.3.2. Linear Theory of the Free Electron Laser in the Raman Scattering Limit 256
6.3.3. Nonlinear Saturation Mechanism for the Free Electron Laser 261
6.4. Summary 263

7. Collective Ion Acceleration with Intense Relativistic Electron Beams 267

7.1. Introduction 267
7.2. Summary of Results for the Neutral Gas and Vacuum Diode Systems . . . 269
7.2.1. Collective Acceleration in a Neutral Gas-Filled Drift Tube 269
7.2.2. Collective Acceleration in an Evacuated Drift Tube 275
7.3. The Ionization Front Accelerator (IFA) 277
7.4. Wave Collective Ion Acceleration Mechanisms 280
7.4.1. The Autoresonant Accelerator (ARA) 282
7.4.2. The Converging Guide Accelerator (CGA) 286
7.5. Summary 289

8. Particle Beam Fusion Concepts 293

8.1. Introduction 293
8.2. Pellet Implosion Criteria 294
8.2.1. Charged Particle Energy Deposition 298
8.2.2. Pellet Compression 303
8.2.3. Rayleigh–Taylor Instability 306
8.2.4. Target Designs for Charged Particle Beam ICF 307
8.3. Electron Beam Fusion Concepts 314
8.3.1. Electron Beam Fusion in Vacuum Diodes 314
8.3.2. Multiple Electron Beam Overlap Schemes 315
8.4. Ion Beam Fusion Concepts 318
8.4.1. Light Ion Fusion Approaches 319
8.4.2. Heavy Ion Fusion Approaches 327
8.5. Summary 330
