

# Springer Handbook of Materials Measurement Methods

Horst Czichos, Tetsuya Saito, Leslie Smith (Eds.)

With CD-ROM, 970 Figures and 158 Tables

# Contents

List of Abbreviations .....	XXIII
-----------------------------	-------

## Part A Materials Measurement System

1 Measurement Principles and Structures .....	3
1.1 What Is Metrology? .....	3
1.2 The Roots and Evolution of Metrology .....	3
1.3 BIPM: The Birth of the Meter Convention .....	6
1.4 BIPM: The First 75 Years .....	7
1.5 Quantum Standards: A Metrological Revolution .....	8
1.6 Regional Metrology Organizations .....	9
1.7 Traceability of Measurements .....	10
1.8 Mutual Recognition of NMI Standards: The CIPM MRA .....	10
1.9 Metrology in the 21st Century .....	12
1.10 The SI System and New Science .....	14
References .....	16
2 Measurement Strategy and Quality .....	17
2.1 Sampling .....	18
2.2 The Traceability of Measurements .....	23
2.3 Statistical Evaluation of Results .....	27
2.4 Validation .....	47
2.5 Inter-laboratory Comparisons and Proficiency Testing .....	57
2.6 (Certified) Reference Materials .....	67
2.7 Reference Procedures .....	75
2.8 Accreditation and Peer Assessment .....	84
2.9 Human Aspects in a Laboratory .....	88
2.10 Further Reading .....	92
References .....	92
3 Materials and Their Characteristics: Overview .....	95
3.1 Basic Features of Materials .....	96
3.2 Classification of Materials Characterization Methods .....	101
References .....	102

## Part B Measurement Methods for Composition and Structure

4 Chemical Composition .....	105
4.1 Bulk Chemical Characterization .....	105
4.2 Microanalytical Chemical Characterization .....	138
References .....	148

<b>5</b>	<b>Nanoscope Architecture and Microstructure</b>	<b>153</b>
5.1	Fundamentals	159
5.2	Crystalline and Amorphous Structure Analysis	180
5.3	Lattice Defects and Impurities Analysis	187
5.4	Molecular Architecture Analysis	206
5.5	Texture, Phase Distributions, and Finite Structures Analysis	217
	References	225
<b>6</b>	<b>Surface and Interface Characterization</b>	<b>229</b>
6.1	Surface Chemical Analysis	230
6.2	Surface Topography Analysis	255
	References	272

## Part C Measurement Methods for Materials Properties

<b>7</b>	<b>Mechanical Properties</b>	<b>283</b>
7.1	Elasticity	284
7.2	Plasticity	299
7.3	Hardness	311
7.4	Strength	333
7.5	Fracture Mechanics	353
7.6	Permeation and Diffusion	371
	References	387
<b>8</b>	<b>Thermal Properties</b>	<b>399</b>
8.1	Thermal Conductivity and Specific Heat Capacity	400
8.2	Enthalpy of Phase Transition, Adsorption and Mixing	408
8.3	Thermal Expansion and Thermomechanical Analysis	415
8.4	Thermogravimetry	417
8.5	Temperature Sensors	417
	References	428
<b>9</b>	<b>Electrical Properties</b>	<b>431</b>
9.1	Electrical Materials	432
9.2	Electrical Conductivity of Metallic Materials	439
9.3	Electrolytical Conductivity	444
9.4	Semiconductors	453
9.5	Measurement of Dielectric Materials Properties	472
	References	481
<b>10</b>	<b>Magnetic Properties</b>	<b>485</b>
10.1	Magnetic Materials	486
10.2	Soft and Hard Magnetic Materials: (Standard) Measurement Techniques for Properties Related to the $B(H)$ Loop	490
10.3	Magnetic Characterization in a Pulsed Field Magnetometer (PFM)	510
10.4	Properties of Magnetic Thin Films	522
	References	527

<b>11 Optical Properties</b> .....	531
11.1 Fundamentals of Optical Spectroscopy.....	532
11.2 Micro-spectroscopy.....	549
11.3 Magneto-optical Measurement.....	553
11.4 Nonlinear Optics and Ultrashort Pulsed Laser Application.....	558
11.5 Fiber Optics.....	570
11.6 Evaluation Technologies for Optical Disk Memory Materials.....	585
11.7 Optical Sensing.....	593
References.....	600

## **Part D Measurement Methods for Materials Performance**

<b>12 Corrosion</b> .....	611
12.1 Background.....	612
12.2 Conventional Electrochemical Test Methods.....	615
12.3 Novel Electrochemical Test Methods.....	639
12.4 Exposure and On-Site Testing.....	643
12.5 Corrosion Without Mechanical Loading.....	643
12.6 Corrosion with Mechanical Loading.....	649
12.7 Hydrogen-Induced Stress Corrosion Cracking.....	659
12.8 High-Temperature Corrosion.....	662
12.9 Inhibitor Testing and Monitoring of Efficiency.....	676
References.....	681
<b>13 Friction and Wear</b> .....	685
13.1 Definitions and Units.....	685
13.2 Selection of Friction and Wear Tests.....	689
13.3 Tribological Test Methods.....	693
13.4 Friction Measurement.....	696
13.5 Quantitative Assessment of Wear.....	701
13.6 Characterization of Surfaces and Debris.....	706
References.....	709
<b>14 Biogenic Impact on Materials</b> .....	711
14.1 Modes of Materials – Organisms Interactions.....	712
14.2 Biological Testing of Wood.....	716
14.3 Testing of Organic Materials.....	731
14.4 Biological Testing of Inorganic Materials.....	753
14.5 Coatings and Coating Materials.....	768
14.6 Reference Organisms.....	775
References.....	780
<b>15 Material–Environment Interactions</b> .....	789
15.1 Materials and the Environment.....	789
15.2 Emissions from Materials.....	804
15.3 Fire Physics and Chemistry.....	813
References.....	825

<b>16 Performance Control and Condition Monitoring .....</b>	<b>831</b>
16.1 Nondestructive Evaluation .....	832
16.2 Industrial Radiology .....	844
16.3 Computerized Tomography – Application to Organic Materials .....	858
16.4 Computerized Tomography – Application to Inorganic Materials .....	864
16.5 Computed Tomography – Application to Composites and Microstructures .....	870
16.6 Structural Health Monitoring – Embedded Sensors .....	875
16.7 Characterization of Reliability .....	891
16.A Appendix .....	907
References .....	908

## **Part E Modeling and Simulation Methods**

<b>17 Molecular Dynamics .....</b>	<b>915</b>
17.1 Basic Idea of Molecular Dynamics .....	915
17.2 Diffusionless Transformation .....	928
17.3 Rapid Solidification .....	935
17.4 Diffusion .....	946
17.5 Summary .....	950
References .....	950
<b>18 Continuum Constitutive Modeling .....</b>	<b>953</b>
18.1 Phenomenological Viscoplasticity .....	953
18.2 Material Anisotropy .....	958
18.3 Metallothermomechanical Coupling .....	963
18.4 Crystal Plasticity .....	966
References .....	970
<b>19 Finite Element and Finite Difference Methods .....</b>	<b>973</b>
19.1 Discretized Numerical Schemes for FEM and FDM .....	975
19.2 Basic Derivations in FEM and FDM .....	977
19.3 The Equivalence of FEM and FDM Methods .....	981
19.4 From Mechanics to Mathematics: Equilibrium Equations and Partial Differential Equations .....	982
19.5 From Mathematics to Mechanics: Characteristic of Partial Differential Equations .....	987
19.6 Time Integration for Unsteady Problems .....	989
19.7 Multidimensional Case .....	991
19.8 Treatment of the Nonlinear Case .....	995
19.9 Advanced Topics in FEM and FDM .....	995
19.10 Free Codes .....	999
References .....	999

<b>20 The CALPHAD Method</b> .....	1001
20.1 Outline of the CALPHAD Method .....	1002
20.2 Incorporation of the First Principle Calculations into the CALPHAD Approach .....	1006
20.3 Prediction of Thermodynamic Properties of Compound Phases with First Principle Calculations .....	1019
References.....	1030
<b>21 Phase Field</b> .....	1031
21.1 Basic Concept of the Phase-Field Method .....	1032
21.2 Total Free Energy of Microstructure .....	1033
21.3 Solidification .....	1042
21.4 Diffusion-Controlled Phase Transformation .....	1045
21.5 Structural Phase Transformation .....	1048
21.6 Microstructure Evolution .....	1050
References.....	1054
<b>22 Monte Carlo Simulation</b> .....	1057
22.1 Fundamentals of the Monte Carlo Method .....	1057
22.2 Improved Algorithms .....	1061
22.3 Quantum Monte Carlo Method .....	1066
22.4 Bicritical Phenomena in O(5) Model.....	1073
22.5 Superconductivity Vortex State .....	1077
22.6 Effects of Randomness in Vortex States .....	1083
22.7 Quantum Critical Phenomena.....	1086
References.....	1089
<b>Appendix – International Standards</b> .....	1097
<b>Acknowledgements</b> .....	1151
<b>About the Authors</b> .....	1153
<b>Detailed Contents</b> .....	1173
<b>Subject Index</b> .....	1189
