Yoshimasa Murayama

Mesoscopic Systems

Fundamentals and Applications

WILEY-VCH

Weinheim · New York · Chichester · Brisbane · Singapore · Toronto

Contents

1 Introduction **5**
1.1 Mesoscopic Systems 5
1.2 Nanoscale Structures 6
1.3 Electronics 6
References 7

2 Quantum versus Classical Physics **11**
2.1 Quantum Effects 11
2.2 Quantum Fluctuation 12
2.3 Particle–Wave Duality 13
2.4 Measurement of an Ensemble of Particles 14
2.5 Coherence 16
2.6 Visibility 19
2.7 Coherence versus Incoherence 24
References 26

3 Quantization **27**
3.1 Schrödinger Equation and Discrete Energies 27
3.2 Bloch Theorem 29
3.3 Effective Mass 30
References 32

4 Dimensionality **33**
4.1 DOS 33
4.2 Dimensionality of a Landau Electron 36
References 38

5 Junctions **39**
5.1 Metal–Metal Junction 39
5.2 Homogeneous Semiconductor Junction 42
5.3 Heterogeneous Semiconductor Junction 43
5.4 Schottky Junction 45
5.5 Metal–Oxide–Semiconductor (MOS) 48
References 49

6 3D Quantum Systems **51**
References 56

7 2D Quantum Systems **57**
7.1 Single Quantum Well 57
7.2 Multiple Quantum Wells 61
7.3 Superlattice 61
7.4 DOS 63
7.5 Landau Electrons 63
7.6 Hydrogenic State of Impurity 64
7.7 Surfaces 65
References 68

8 1D Quantum Systems **71**
References 72

9 0D Quantum Systems **73**
References 76

10 Transport Properties **77**
10.1 Transport Perpendicular to QW 77
10.2 Transport Parallel to QW 81
10.3 Magnetic Response 86
10.4 Concepts of Electric Conductivity 92
10.5 Universal Conductance Fluctuation 96
10.6 Quantized Conductance 98
10.7 Integral Quantized Hall Effect (IQHE) 102
10.8 Fractional Quantized Hall Effect (FQHE) 106
10.9 Ballistic Transport 108
10.10 Coulomb Blockade 109
10.11 Atomic Wires 115
References 116

11 Optical Properties **121**
11.1 Single/Multiple Quantum Wells 121
11.2 Exciton Absorption in Various Dimensional Geometries 129
References 138

12 Magnetic Properties **139**
12.1 Fine Particles 139
12.2 Magnetic Thin Films 140
References 155

13 Properties of Macroscopic Quantum States **157**
13.1 Kosterlitz–Thouless Mode in High-T_c SC 158
13.2 Superconducting Thin Wires 161
13.3 Superconducting Tunnel Junction 163
13.4 Transport Properties of High-T_c Cuprates 168
13.5 Proximity Effect 171
13.6 Andreev Reflection 176
References 178

14 Future Prospects **181**

A FDM Solution of Schrödinger Equations **183**

B Effective-Mass Approximated Equation **187**

C Boundary Conditions for an Interface **191**

D Hydrogenic Envelope Function in 3D and 2D **197**

E Transition Probability of Optical Processes **207**

F Eigenvalue Problem for a Linear Electric Potential **211**

G Calculation of Conductivity Based on the Kubo Formula **213**

H Calculation of Conductivity Tensor in a Magnetic Field **217**

I Landau State in z-Representation **223**

J Micromagnetism of Stripe Domain **225**

K Physics Underlying Josephson Junctions **231**

Index **235**
