Series/Number 07-152

MODERN METHODS FOR ROBUST REGRESSION

Robert Andersen

University of Toronto

CONTENTS

List of Figures	ix xi xiii
List of Tables	
Series Editor's Introduction	
Acknowledgments	XV
1. Introduction	1
Defining Robustness	2
Defining Robust Regression	3
A Real-World Example: Coital Frequency	
of Married Couples in the 1970s	4
2. Important Background	6
Bias and Consistency	7
Breakdown Point	7
Influence Function	8
Relative Efficiency	9
Measures of Location	10
The Mean	ΙI
a-Trimmed Mean	12
The Median	13
Measures of Scale	13
Standard Deviation	14
Mean Deviation From the Mean	14
Mean Deviation From the Median	15
Interquartile Range	15
Median A bsolute Deviation	16
M-Estimation	16
M-Estimation of Location	17
Huber Estimates	18
Biweight Estimates	19
^Estimators of Scale	20

	Comparing Various Estimates	23
	EXAMPLE 2.1: Simulated Data	23
	EXAMPLE 2.2: Public Opinion Toward Pay	
	Inequality in Cross-National Perspective	24'
	Notes	28
3.	Robustness, Resistance, and Ordinary	
	Least Squares Regression	29
	Ordinary Least Squares Regression	29
	Implications of Unusual Cases for OLS Estimates	
	and Standard Errors	31
	EXAMPLE 3.1: Income Inequality and Public Opinion	
	Toward Pay Equality in 26 New Democracies	35
	Detecting Problematic Observations in OLS Regression	37
	Detecting Leverage: Hat Values	38
	Detecting Regression Outliers: Studentized Residuals	
	and the Bonferroni Adjustment	39
	Detecting Influence: DFBETAs, Cook's D,	
	and Partial Regression Plots	41
	Some Strategies for Dealing With Influential Cases	46
	Notes	47
		••
4.	Robust Regression for the Linear Model	47
4.	Robust Regression for the Linear Model L-Estimators	47 47
4.	Robust Regression for the Linear Model L-Estimators Least Absolute Values Regression	47 47 48
4.	Robust Regression for the Linear Model L-Estimators Least Absolute Values Regression Least Median of Squares Regression	47 47 48 49
4.	Robust Regression for the Linear Model L-Estimators Least Absolute Values Regression Least Median of Squares Regression Least Trimmed Squares Regression	47 47 48 49 49
4.	Robust Regression for the Linear Model L-Estimators Least Absolute Values Regression Least Median of Squares Regression Least Trimmed Squares Regression /^-Estimators	47 47 48 49 49 50
4.	Robust Regression for the Linear Model L-Estimators Least Absolute Values Regression Least Median of Squares Regression Least Trimmed Squares Regression /^-Estimators M-Estimators	47 47 48 49 49 50 51
4.	Robust Regression for the Linear Model L-Estimators Least Absolute Values Regression Least Median of Squares Regression Least Trimmed Squares Regression /^-Estimators M-Estimators Iterative!}' Reweighted Least Squares	47 47 48 49 49 50 51 52
4.	Robust Regression for the Linear Model L-Estimators Least Absolute Values Regression Least Median of Squares Regression Least Trimmed Squares Regression /^-Estimators M-Estimators Iterative!}' Reweighted Least Squares GM-Estimators	47 47 48 49 49 50 51 52 53
4.	Robust Regression for the Linear Model L-Estimators Least Absolute Values Regression Least Median of Squares Regression Least Trimmed Squares Regression /^-Estimators M-Estimators Iterative!]' Reweighted Least Squares GM-Estimators S-Estimators	47 47 48 49 49 50 51 52 53 55
4.	Robust Regression for the Linear Model L-Estimators Least Absolute Values Regression Least Median of Squares Regression Least Trimmed Squares Regression /^-Estimators M-Estimators Iterative!]' Reweighted Least Squares GM-Estimators S-Estimators Generalized ^-Estimators	47 47 48 49 49 50 51 52 53 55 55
4.	Robust Regression for the Linear Model L-Estimators Least Absolute Values Regression Least Median of Squares Regression /^-Estimators M-Estimators Iterative!]' Reweighted Least Squares GM-Estimators S-Estimators Generalized ^-Estimators MM-Estimators	47 47 48 49 49 50 51 52 53 55 55 55 56
4.	Robust Regression for the Linear Model L-Estimators Least Absolute Values Regression Least Median of Squares Regression Least Trimmed Squares Regression /^-Estimators M-Estimators Iterative!}' Reweighted Least Squares GM-Estimators S-Estimators Generalized ^-Estimators MM-Estimators Comparing the Various Estimators	47 47 48 49 49 50 51 52 53 55 55 55 56 57
4.	Robust Regression for the Linear Model L-Estimators Least Absolute Values Regression Least Median of Squares Regression Least Trimmed Squares Regression /^-Estimators M-Estimators Iterative!}' Reweighted Least Squares GM-Estimators S-Estimators Generalized ^-Estimators MM-Estimators Comparing the Various Estimators EXAMPLE 4.1: Simulated Data	47 47 48 49 49 50 51 52 53 55 55 55 56 57 8
4.	Robust Regression for the Linear Model L-Estimators Least Absolute Values Regression Least Median of Squares Regression Least Trimmed Squares Regression /^-Estimators M-Estimators Iterative!]' Reweighted Least Squares GM-Estimators S-Estimators Generalized ^-Estimators MM-Estimators Comparing the Various Estimators EXAMPLE 4.1: Simulated Data 5 EXAMPLE 4.2: Multiple Regression	47 47 48 49 49 50 51 52 53 55 55 55 56 57 8
4.	Robust Regression for the Linear Model L-Estimators Least Absolute Values Regression Least Median of Squares Regression Least Trimmed Squares Regression /^-Estimators M-Estimators Iterative!]' Reweighted Least Squares GM-Estimators S-Estimators Generalized ^-Estimators MM-Estimators Comparing the Various Estimators EXAMPLE 4.1: Simulated Data 5 EXAMPLE 4.2: Multiple Regression Predicting Public Opinion	47 47 48 49 49 50 51 52 53 55 55 55 56 57 8 59
4.	Robust Regression for the Linear Model L-Estimators Least Absolute Values Regression Least Median of Squares Regression Least Trimmed Squares Regression /^-Estimators M-Estimators Iterative!]' Reweighted Least Squares GM-Estimators S-Estimators Generalized ^-Estimators MM-Estimators Comparing the Various Estimators EXAMPLE 4.1: Simulated Data 5 EXAMPLE 4.2: Multiple Regression Predicting Public Opinion Diagnostics Revisited: Robust Regression-Related	47 47 48 49 49 50 51 52 53 55 55 56 57 8 59
4.	Robust Regression for the Linear Model L-Estimators Least Absolute Values Regression Least Median of Squares Regression Least Trimmed Squares Regression /^-Estimators M-Estimators Iterative!]' Reweighted Least Squares GM-Estimators S-Estimators Generalized ^-Estimators MM-Estimators Comparing the Various Estimators EXAMPLE 4.1: Simulated Data 5 EXAMPLE 4.2: Multiple Regression Predicting Public Opinion Diagnostics Revisited: Robust Regression-Related Methods for Detecting Outliers	47 47 48 49 49 50 51 52 53 55 55 55 56 57 8 59 62

	RR-Plots ('•Residual-Residual" Plots)	67
	Robust Distances	67
	Notes	70
5.	Standard Errors for Robust Regression	70
	Asymptotic Standard Errors for Robust	
	Regression Estimators	71
	Bootstrapped Standard Errors	71
	Random-x Bootstrapping	72
	Fixed-x Bootstrapping	72
	Constructing Confidence Intervals	73
	EXAMPLE 5.1: The Impact of Democracy	
	on the Effects of Income Inequality	
	and Per Capita GDP on Public Opinion	74
	Notes	77
6.	Influential Cases in Generalized Linear Models	79
	The Generalized Linear Model	79
	Detecting Unusual Cases in Generalized Linear Models	82
	Residuals From the GLM	82
	Hat Values and Leverage	83
	Assessing Influence	83
	Robust Generalized Linear Models	83
	M-Estimation for GLMs	84
	EXAMPLE 6.1: Logistic Regression Predicting	
	Vote for the Labour Party in Britain, 2001	85
	EXAMPLE 6.2: Robust Poisson Regression	
	Predicting Voluntary Association	
	Membership in Quebec	87
	Notes	89
