

# **Agile Management for Software Engineering**

**Applying the Theory  
of Constraints  
for Business Results**

*David J. Anderson*

*Foreword by Eli Schragenheim*

**PRENTICE HALL**  
**Professional Technical Reference**

<b>SECTION 1 Agile Management</b>	<b>1</b>
<b>chapter 1 Theories for Agile Management</b>	<b>3</b>
The Theory of Constraints	3
Just-in-Time Inventory	4
Quality	5
Lean Production	5
Six Sigma	6
Comparison of Theories	6
Scientific Proof for Agile Management	7
Empirical Versus Defined Processes	9
Convergent Versus Divergent Processes	10
Chaos Theory and Uncertainty	10
Systems Thinking and Learning Organizations	11
Emergence	11
Summary	12
<b>chapter 2 Management Accounting for Systems</b>	<b>13</b>
A General System	13
Detail Complexity Versus Systems Complexity	15
Throughput Accounting for General Systems	15

	A System of Software Development	17
	A More Complex Software Development System	18
	The System Goal	20
	Financial Metrics for General Business Systems	21
	Financial Metrics for Software Development Systems	22
	Predicting the Future	23
	Framing the Problem	24
	Understanding Software Production in the Value Chain	25
	Throughput Accounting Versus Cost Accounting	25
	Summary	28
<b>chapter 3</b>	<b>TOC in Software Production</b>	<b>29</b>
	TOC's Five Basic Steps	29
	Identify and Exploit Constraints	29
	Perishable Requirements	32
	Idleness Might Breed Contempt	32
	Elevating a Constraint	33
	Focus of Investment	34
	Is the 8-Hour Day the Best Choice of System Constraint?	34
	Summary	35
<b>chapter 4</b>	<b>Dealing with Uncertainty</b>	<b>37</b>
	The Five Constraints of Software Development	37
	Aggregation Reduces Uncertainty	46
	Summary	47
<b>chapter 5</b>	<b>Software Production Metrics</b>	<b>49</b>
	Choosing Metrics	49
	Agile Software Production Metrics	49
	Traditional Software Production Metrics	50

	Measuring Inventory in the Software Production System	51	
	Expressions of Inventory	52	
	Measuring Production Quantity	52	
	Lead Time	53	
	OE per Unit	54	
	Summary	54	
<b>chapter 6</b>	<b>Agile Project Management</b>	<b>55</b>	
	Traditional Versus RAD Model for Project Management	55	
	Task Planning and Effort Tracking	56	
	The Project Manager's New Work	59	
	Summary	60	
<b>chapter 7</b>	<b>Agile Project Planning</b>	<b>63</b>	
	The Project Buffer	63	
	Logical Collections of Inventory	63	
	The Critical Path and Parallel Paths	64	
	Early Start	65	
	Late Start	65	
	Feeding Buffers	66	
	Buffer Usage	66	
	Agile Project Tracking Metrics	67	
	Resource Constraints	68	
	Critical Chain Versus Critical Path	70	
	Summary	71	
<b>chapter 8</b>	<b>The Agile Manager's New Work</b>	<b>73</b>	
	New Roles for Agile Managers	73	
	Development Manager Role	73	
	The Program or Release Manager Role	74	

	Product Manager Role	74
	Project Manager Role	75
	Roles Versus Positions	76
<b>chapter 9</b>	<b>Agile Development Management</b>	<b>77</b>
	The Role of the Development Manager	77
	Identifying Flow	77
	Identifying a Bottleneck	79
	The True Cost of a Bottleneck	80
	Recovering and Stretching Software Production Constraints	81
	The True Cost of Poor Quality	81
	Regression Effects	85
	Improve Quality in Front of a Bottleneck	86
	How Batch Sizes Affect Flow	88
	Monitoring Cumulative Flow	90
	Visual Control	93
	Summary	94
<b>chapter 10</b>	<b>Software Resource Planning</b>	<b>95</b>
	Manufacturing Resource Planning (MRP)	95
	Drum Beat	95
	Planning Release of Requirements into the System	96
	Summary	103
<b>chapter 11</b>	<b>An Agile Maturity Model</b>	<b>105</b>
	A New Maturity Model	105
	Summary	107
<b>chapter 12</b>	<b>Setting the Governing Rules</b>	<b>109</b>
	Allow Adaptive Behavior to Emerge	109
	The Role of the Agile Executive	109
	Reinertsen's Three Tiers of Control	109

	The Process Improvement Problem	110	
	The Problem with Production Rate Metrics	111	
	Governing Rules as Maturity Increases	111	
	Governing Rules for Managers	112	
	Governing Rules for Engineers	115	
	Team Measurements	115	
<b>chapter 13</b>	<b>Staffing Decisions</b>	<b>117</b>	
	Turnover	117	
	Loss of Throughput on a Constraint	118	
	Understanding the System Constraint is Essential	119	
	Outsource Decisions	120	
<b>chapter 14</b>	<b>Operations Review</b>	<b>123</b>	
	Purpose	123	
	Attendees	123	
	Timing	124	
	Information Rather Than Data	124	
	Summary	128	
<b>chapter 15</b>	<b>Agile Management in the IT Department</b>	<b>131</b>	
	Corporate IT's Value-Added Contribution	131	
	Learning from Financial Metrics	133	
	A More Profitable Corporate IT Department	134	
	Summary	136	
<b>chapter 16</b>	<b>Agile Product Management</b>	<b>137</b>	
	Sales and Throughput	137	
	Learning Is Not Restricted to Engineering	138	
	Management Accounting for Product Development	138	
	Throughput Accounting for Software Product Development	139	
	Appropriateness of the Time-Based Throughput Model	140	

	Cost Accounting for Software Product Development	141
	Throughput Versus Cost Models	141
	Making On-Going Investment	142
	Product Mix	142
	Managing the Scope Constraint	143
	Product Mix When Revenue Is the Goal	144
	Product Mix and the Effect on Investment	146
	Product Mix, Risk, and Delay and the Effect on Operating Expense	146
	Summary	148
<b>chapter 17</b>	<b>Financial Metrics for Software Services</b>	<b>149</b>
	Defining a Software Service	149
	Service Business Economics	150
	Determining Throughput for Software Services	150
	Operating Expense for Services	151
	Net Profit for Services	152
	Return on Investment for Services	152
	Attributing a Value to a Release	152
	Profit and ROI by Service Release	153
	Product Mix	154
	Dealing with Uncertainty	154
<b>chapter 18</b>	<b>The Business Benefit of Agile Methods</b>	<b>155</b>
	The Principles of Agile Methods	155
	More Than Agility	158
	Making Profitable Development Happen	158
	<b>SECTION 2 A Survey of Methods</b>	<b>161</b>
<b>chapter 19</b>	<b>Production Metrics for Traditional Methods</b>	<b>163</b>
	SDLC	163
	Unified Development Process	171

<b>chapter 20</b>	<b>Financial Metrics in Traditional Methods</b>	<b>177</b>
	Inventory	177
	Investment	177
	Operating Expense	178
	Throughput	179
	Net Profit in Structured Methods	179
	Return on Investment in Structured Methods	179
	Accounting for Change	180
 <b>chapter 21</b>	 <b>Production Metrics in FDD</b>	 <b>181</b>
	Overview of Feature Driven Development (FDD)	181
	Feature Definition	184
	Agile Management Theory and FDD	185
	Process Steps and FDD	185
	Estimating OE for an FDD Project	186
	The Modeling Rule of Thumb	186
	Level of Effort Estimation in FDD	186
	Formulae for Success	188
 <b>chapter 22</b>	 <b>Project Management with FDD</b>	 <b>191</b>
	Self-Organizing Construction within Planned Assembly	191
	Feature Sets	191
	Build Batches	191
	User Interface Feature Sets	192
	Subject Areas	193
	The Feature Lifecycle	193
	Process Control in FDD	193
	Estimates Versus Agreed Function	194
	Scheduling an FDD Project	195
	Scheduling Subject Areas and Feature Sets	195
	FDD Workflow	197

	FDD Knowledge Management System and Visual Control	199
	Executive Management Metrics in FDD	200
<b>chapter 23</b>	<b>FDD Process Elements Explained</b>	<b>201</b>
	Exploiting Engineering Resources	201
	The File Access Constraint—Class Ownership	202
	The Developer Resource Constraint—Feature Teams and the Surgical Team	202
	The Setup Time Constraint—Chief Programmer Work Packages	203
	Batch Size	204
	The Scope Constraint—Prioritized Feature Lists	204
	The Time Constraint and Buffers	207
	The Budget Constraint—Inventory Cap and Buffer	209
	The Test Bottleneck	210
	Advanced Modeling Techniques	211
	Inventory Management in FDD	212
	Morning Roll Call	213
	How FDD Improves the S-Curve Effect	215
	The Time Constraint Revisited	216
	The Local Safety Problem	219
	Exploiting Heroic Effort	219
<b>chapter 24</b>	<b>Financial Metrics in FDD</b>	<b>221</b>
	Inventory in FDD	221
	Investment in FDD	221
	Operating Expense in FDD	222
	Throughput in FDD	223
	Value-Added in FDD	223
	Return on Investment in FDD	224
	Accounting for Change	224

Accounting for Rework	224	
Avoid Double-Counting	224	
<b>chapter 25 Production Metrics in Extreme Programming</b>	<b>225</b>	
Metrics in XP	225	
Raw Material	225	
Inventory	225	
Tasks	226	
Throughput	227	
Production Rate	227	
Inventory Tracking	227	
Lead Time	228	
Process Step Time	228	
Inventory Cap	229	
Investment	229	
Risk Philosophy	229	
Testing	229	
Pipelining	229	
Refactoring	230	
Metrics for Up-Management in XP	230	
<b>chapter 26 XP Process Elements Explained</b>	<b>233</b>	
Assessing User Stories	233	
Prioritizing Stories	234	
Option Theory	234	
The Planning Game	234	
Continuous Integration	235	
Integration Testing	235	
Pair Programming	236	
Stand-Up Meeting	238	

Unit Testing	238
Collective Ownership	239
Refactoring	239
40-Hour Week	240
On-Site Customer	240
Generalists	240
Elimination Versus Protection, Subordination, and Elevation	241
<b>chapter 27 Financial Metrics in XP</b>	<b>243</b>
Inventory in XP	243
Investment in XP	243
Operating Expense in XP	244
Throughput in XP	244
Net Profit in XP	244
Return on Investment in XP	245
Accounting for Change	245
Accounting for Rework	245
The Cost of Change Curve	246
<b>chapter 28 Production Metrics in Scrum</b>	<b>251</b>
Background	251
Raw Material	252
Inventory	252
Throughput	253
Production Rate	253
Metrics	254
Sprint Planning and Project Management	254
Inventory Tracking	254
Lead Time	254
Process Step Time	255
No Expediting	255
Inventory Cap	255

Investment	255	
Risk Philosophy	256	
Testing	256	
Pipelining	256	
Refactoring	257	
Metrics for Up-Management in Scrum	257	
<b>chapter 29 Scrum Process Elements Explained</b>	<b>259</b>	
The Scrum Master	259	
The Product Backlog	259	
The 30-Day Sprint	260	
Release	260	
The Sprint Goal Commitment	261	
The Scrum Meeting	261	
Team Size	261	
Team Composition	262	
Working Environment	262	
The Sprint Review	263	
Engineering Practices	263	
<b>chapter 30 RAD Process Elements Explained</b>	<b>265</b>	
Principles of RAD	265	
Inventory Cap	265	
Lead Time	266	
Operating Expense	266	
Limits of RAD Methods	266	
<b>SECTION 3 Comparison of Methods</b>	<b>269</b>	
<b>chapter 31 Devil's Advocacy</b>	<b>271</b>	
Traditional Metrics Versus Agile Principles	271	
Specialists Versus Generalists	272	
Adding More People Makes Projects Later	274	

<b>chapter 32</b>	<b>States of Control and Reducing Variation</b>	<b>277</b>
	The Ideal State	279
	The Threshold State	279
	The Edge of Chaos State	280
	Chaos	280
	Comprehending the Known Universe	280
	Improving Analysis and Modeling Maturity	281
	Improving the Process Maturity	282
	FDD Focuses on Variance as Well as Quality and Inventory	283
	XP Focuses on Quality and Short Lead Times	284
	Comparison of Method Focus	285
	Seek Process Maturity	285
<b>chapter 33</b>	<b>Comparison of Production Metrics</b>	<b>287</b>
	FDD	287
	Extreme Programming	288
	Scrum	288
	Traditional Methods—Function Points	289
	Traditional Methods—UDP	289
	Summary	290
<b>chapter 34</b>	<b>Applicability of Agile Methods</b>	<b>291</b>
	Dividing up the Process Space	291
	What is Agility?	293
	Scale Versus Ability to Expedite	294
	Statistical Process Control and Agile Methods	295
	What Does This Mean?	297
	Transferable Quality Improvement	297
	Summary	300
	<b>Index</b>	<b>301</b>
