List of examples pag		age xvii	
Pre	Preface xix		
1 Why?		7?	1
	1.1	"What is multilevel regression modeling?	1
	1.2	Some examples from our own research	3
	1.3	Motivations for multilevel modeling	6
	1.4	Distinctive features of this book	8
	1.5	Computing	9
2	Con	cepts and methods from basic probability and statistics	13
	2.1	Probability distributions	13
	2.2	Statistical inference	16
	2.3	Classical confidence intervals -	18
	2.4	Classical hypothesis testing	20
	2.5	Problems with statistical significance	22
	2.6	55,000 residents desperately need your help!	23
	2.7	Bibliographic note	26
	2.8	Exercises •	26
Pa	rt 1	A: Single-level regression	29
3	Line	ear regression: the basics	31
	3.1	One predictor	31
	3.2	Multiple predictors	32
	3.3	Interactions	34
	3.4	Statistical inference •	37
	3.5	Graphical displays of data and fitted model	42
	3.6	Assumptions and diagnostics	45
	3.7	Prediction and validation	47
	3.8	Bibliographic note	49
	3.9	Exercises	49
4	Line	ear regression: before and after fitting the model	53
	4.1	Linear transformations	53
	4.2	Centering and standardizing, especially for models with interaction	ons 55
	4.3	Correlation and "regression to the mean"	57
	4.4	Logarithmic transformations	59
	4.5	Other transformations	65
	4.6	Building regression models for prediction	68
	4.7	Fitting a series of regressions	73

	4.8	Bibliographic note	74
	4.9	Exercises	74
_	_		
5	_	istic regression	79
	5.1	Logistic regression with a single predictor	79
	5.2	Interpreting the logistic regression coefficients	81
	5.3	Latent-data formulation	85
	5.4	Building a logistic regression model: wells in Bangladesh	86
	5.5	Logistic regression with interactions	92
	5.6	Evaluating, checking, and comparing fitted logistic regressions	97
	5.7 5.8	Average predictive comparisons on the probability scale	101 104
	5.8 5.9	Identifiability and separation	104
		Bibliographic note Exercises	105
	5.10	Exercises ,	103
6	Gen	eralized linear models	109
	6.1	Introduction " '	109
	6.2	Poisson regression, exposure, and overdispersion	110
	6.3	Logistic-binomial model	116
	6.4	Probit regression: normally distributed latent data	118
	6.5	Ordered and unordered categorical regression	119
	6.6	Robust regression using the t model	124
	6.7	Building more complex generalized linear models	125
	6.8	Constructive choice models	127
	6.9	Bibliographic note	131
	6.10	Exercises	132
Pa	ırt II	3: Working with regression inferences	135
7	Sim	ulation of probability models and statistical inferences	137
7		ulation of probability models and statistical inferences Simulation of probability models	137 137
7	7.1	Simulation of probability models	137 137
7		Simulation of probability models Summarizing linear regressions using simulation: an informal	
7	7.1 7.2	Simulation of probability models Summarizing linear regressions using simulation: an informal Bayesian approach •	137
7	7.1 7.2 7.3	Simulation of probability models Summarizing linear regressions using simulation: an informal Bayesian approach Simulation for nonlinear predictions: congressional elections	137 140
7	7.1 7.2 7.3 7.4	Simulation of probability models Summarizing linear regressions using simulation: an informal Bayesian approach Simulation for nonlinear predictions: congressional elections Predictive simulation for generalized linear models	137 140 144
7	7.1 7.2 7.3	Simulation of probability models Summarizing linear regressions using simulation: an informal Bayesian approach Simulation for nonlinear predictions: congressional elections	137 140 144 148
	7.1 7.2 7.3 7.4 7.5 7.6	Simulation of probability models Summarizing linear regressions using simulation: an informal Bayesian approach Simulation for nonlinear predictions: congressional elections Predictive simulation for generalized linear models Bibliographic note Exercises	137 140 144 148 151 152
7	7.1 7.2 7.3 7.4 7.5 7.6 Sim	Simulation of probability models Summarizing linear regressions using simulation: an informal Bayesian approach Simulation for nonlinear predictions: congressional elections Predictive simulation for generalized linear models Bibliographic note Exercises sullation for checking statistical procedures and model fits	137 140 144 148 151 152 155
	7.1 7.2 7.3 7.4 7.5 7.6 Sim 8.1	Simulation of probability models Summarizing linear regressions using simulation: an informal Bayesian approach Simulation for nonlinear predictions: congressional elections Predictive simulation for generalized linear models Bibliographic note Exercises Aulation for checking statistical procedures and model fits Fake-data simulation	137 140 144 148 151 152 155
	7.1 7.2 7.3 7.4 7.5 7.6 Sim 8.1 8.2	Simulation of probability models Summarizing linear regressions using simulation: an informal Bayesian approach Simulation for nonlinear predictions: congressional elections Predictive simulation for generalized linear models Bibliographic note Exercises Fullation for checking statistical procedures and model fits Fake-data simulation Example: using fake-data simulation to understand residual plots	137 140 144 148 151 152 155 155
	7.1 7.2 7.3 7.4 7.5 7.6 Sim 8.1 8.2 8.3	Simulation of probability models Summarizing linear regressions using simulation: an informal Bayesian approach Simulation for nonlinear predictions: congressional elections Predictive simulation for generalized linear models Bibliographic note Exercises Fake-data simulation Example: using fake-data simulation to understand residual plots Simulating from the fitted model and comparing to actual data	137 140 144 148 151 152 155 157 158
	7.1 7.2 7.3 7.4 7.5 7.6 Sim 8.1 8.2 8.3 8.4	Simulation of probability models Summarizing linear regressions using simulation: an informal Bayesian approach Simulation for nonlinear predictions: congressional elections Predictive simulation for generalized linear models Bibliographic note Exercises Fake-data simulation Example: using fake-data simulation to understand residual plots Simulating from the fitted model and comparing to actual data Using predictive simulation to check the fit of a time-series model	137 140 144 148 151 152 155 157 158 163
	7.1 7.2 7.3 7.4 7.5 7.6 Sim 8.1 8.2 8.3	Simulation of probability models Summarizing linear regressions using simulation: an informal Bayesian approach Simulation for nonlinear predictions: congressional elections Predictive simulation for generalized linear models Bibliographic note Exercises Fake-data simulation Example: using fake-data simulation to understand residual plots Simulating from the fitted model and comparing to actual data	137 140 144 148 151 152 155 157 158
8	7.1 7.2 7.3 7.4 7.5 7.6 Sim 8.1 8.2 8.3 8.4 8.5 8.6	Simulation of probability models Summarizing linear regressions using simulation: an informal Bayesian approach Simulation for nonlinear predictions: congressional elections Predictive simulation for generalized linear models Bibliographic note Exercises Aulation for checking statistical procedures and model fits Fake-data simulation Example: using fake-data simulation to understand residual plots Simulating from the fitted model and comparing to actual data Using predictive simulation to check the fit of a time-series model Bibliographic note Exercises	137 140 144 148 151 152 155 157 158 163 165
	7.1 7.2 7.3 7.4 7.5 7.6 Sim 8.1 8.2 8.3 8.4 8.5 8.6 Cau	Simulation of probability models Summarizing linear regressions using simulation: an informal Bayesian approach Simulation for nonlinear predictions: congressional elections Predictive simulation for generalized linear models Bibliographic note Exercises Fulation for checking statistical procedures and model fits Fake-data simulation Example: using fake-data simulation to understand residual plots Simulating from the fitted model and comparing to actual data Using predictive simulation to check the fit of a time-series model Bibliographic note Exercises Isal inference using regression on the treatment variable	137 140 144 148 151 152 155 155 157 158 163 165 167

12 M 11	ltilevel linear models: the basics	251
	Notation •	251
	Partial pooling with no predictors	252
	Partial pooling with predictors .	254
	Quickly fitting multilevel models in R	259
	Five ways to write the same model	262
	Group-level predictors	265
	Model building and statistical significance	270
	Predictions for new observations and new groups	272
	How many groups and how many observations, per group are	
	needed to fit a multilevel model?	275
12.1	0 Bibliographic note	276
	1 Exercises	277
13 Mu	ltilevel linear models: varying slopes, non-nested models, and	
	er complexities	279
	Varying intercepts and slopes	279
	Varying slopes without varying intercepts	283

xii CONTENTS

	13.3	Modeling multiple varying coefficients using the scaled inverse- Wishart distribution	284
	13.4	Understanding correlations between group-level intercepts and	201
		slopes	287
	13.5	Non-nested models	289
		Selecting, .transforming, and combining regression inputs	293
		More complex multilevel models	297
		Bibliographic note	297
	13.9	Exercises	298
14	Mul	tilevel logistic regression	301
		State-level opinions from national polls	301
	14.2	Red states and blue states: what's the matter with Connecticut?	310
		Item-response and ideal-point models	314
		Non-nested overdispersed model for death sentence reversals	320
		_Bibliographic note ,	321
	14.6	'Exercises I '	322
15	Mul	tilevel generalized linear models	325
		Overdispersed Poisson regression: police stops and ethnicity	325
		Ordered categorical regression: storable votes	331
		Non-nested negative-binomial model of structure in social networks	332
	15.4	Bibliographic note •	342
	15.5	Exercises	342
Pa	rt 2I	3: Fitting multilevel models	343
16	Mul	tilevel modeling in Bugs and R: the basics	345
		Why you should learn Bugs	345
			ンサン
	16.2	Bayesian interence and prior distributions	345
		Bayesian inference and prior distributions Fitting and understanding a varying-intercept multilevel model	
	16.316.4	Fitting and understanding a varying-intercept multilevel model using R and Bugs Step by step through a Bugs model, as called from R	345 348 353
	16.3 16.4 16.5	Fitting and understanding a varying-intercept multilevel model using R and Bugs Step by step through a Bugs model, as called from R Adding individual- and group-level predictors	345 348 353 359
	16.3 16.4 16.5 16.6	Fitting and understanding a varying-intercept multilevel model using R and Bugs Step by step through a Bugs model, as called from R Adding individual- and group-level predictors Predictions for new observations and new groups	345 348 353 359 361
	16.3 16.4 16.5 16.6 16.7	Fitting and understanding a varying-intercept multilevel model using R and Bugs Step by step through a Bugs model, as called from R Adding individual- and group-level predictors Predictions for new observations and new groups Fake-data simulation	348 353 359 361 363
	16.3 16.4 16.5 16.6 16.7 16.8	Fitting and understanding a varying-intercept multilevel model using R and Bugs Step by step through a Bugs model, as called from R Adding individual- and group-level predictors Predictions for new observations and new groups Fake-data simulation The principles of modeling in Bugs	345 348 353 359 361 363 366
	16.3 16.4 16.5 16.6 16.7 16.8 16.9	Fitting and understanding a varying-intercept multilevel model using R and Bugs Step by step through a Bugs model, as called from R Adding individual- and group-level predictors Predictions for new observations and new groups Fake-data simulation The principles of modeling in Bugs Practical issues of implementation	348 353 359 361 363 366 369
	16.3 16.4 16.5 16.6 16.7 16.8 16.9	Fitting and understanding a varying-intercept multilevel model using R and Bugs Step by step through a Bugs model, as called from R Adding individual- and group-level predictors Predictions for new observations and new groups Fake-data simulation The principles of modeling in Bugs Practical issues of implementation Open-ended modeling in Bugs	348 353 359 361 363 366 369 370
	16.3 16.4 16.5 16.6 16.7 16.8 16.9 16.10	Fitting and understanding a varying-intercept multilevel model using R and Bugs Step by step through a Bugs model, as called from R Adding individual- and group-level predictors Predictions for new observations and new groups Fake-data simulation The principles of modeling in Bugs Practical issues of implementation Open-ended modeling in Bugs Bibliographic note	345 348 353 359 361 363 366 370 373
	16.3 16.4 16.5 16.6 16.7 16.8 16.9 16.10	Fitting and understanding a varying-intercept multilevel model using R and Bugs Step by step through a Bugs model, as called from R Adding individual- and group-level predictors Predictions for new observations and new groups Fake-data simulation The principles of modeling in Bugs Practical issues of implementation Open-ended modeling in Bugs	348 353 359 361 363 366 369 370
17	16.3 16.4 16.5 16.6 16.7 16.8 16.9 16.10 16.11	Fitting and understanding a varying-intercept multilevel model using R and Bugs Step by step through a Bugs model, as called from R Adding individual- and group-level predictors Predictions for new observations and new groups Fake-data simulation The principles of modeling in Bugs Practical issues of implementation Open-ended modeling in Bugs Bibliographic note Exercises ing multilevel linear and generalized linear models in Bugs	345 348 353 359 361 363 369 370 373
17	16.3 16.4 16.5 16.6 16.7 16.8 16.9 16.10 16.12 Fitt	Fitting and understanding a varying-intercept multilevel model using R and Bugs Step by step through a Bugs model, as called from R Adding individual- and group-level predictors Predictions for new observations and new groups Fake-data simulation The principles of modeling in Bugs Practical issues of implementation Open-ended modeling in Bugs Bibliographic note Exercises ing multilevel linear and generalized linear models in Bugs R	345 348 353 359 361 363 366 370 373 373
17	16.3 16.4 16.5 16.6 16.7 16.8 16.9 16.10 16.12 Fitt and 17.1	Fitting and understanding a varying-intercept multilevel model using R and Bugs Step by step through a Bugs model, as called from R Adding individual- and group-level predictors Predictions for new observations and new groups Fake-data simulation The principles of modeling in Bugs Practical issues of implementation Open-ended modeling in Bugs Bibliographic note Exercises ing multilevel linear and generalized linear models in Bugs R Varying-intercept, varying-slope models	345 348 353 359 361 363 369 370 373 375 375
17	16.3 16.4 16.5 16.6 16.7 16.8 16.9 16.10 16.11 17.1 17.2	Fitting and understanding a varying-intercept multilevel model using R and Bugs Step by step through a Bugs model, as called from R Adding individual- and group-level predictors Predictions for new observations and new groups Fake-data simulation The principles of modeling in Bugs Practical issues of implementation Open-ended modeling in Bugs Bibliographic note Exercises Ing multilevel linear and generalized linear models in Bugs R Varying-intercept, varying-slope models Varying intercepts and slopes with group-level predictors	345 348 353 359 361 363 369 370 373 375 375
17	16.3 16.4 16.5 16.6 16.7 16.8 16.9 16.10 16.11 17.1 17.2 17.3	Fitting and understanding a varying-intercept multilevel model using R and Bugs Step by step through a Bugs model, as called from R Adding individual- and group-level predictors Predictions for new observations and new groups Fake-data simulation The principles of modeling in Bugs Practical issues of implementation Open-ended modeling in Bugs Bibliographic note Exercises Ing multilevel linear and generalized linear models in Bugs R Varying-intercept, varying-slope models Varying intercepts and slopes with group-level predictors Non-nested models	345 348 353 359 361 363 369 370 373 375 375 380

xiv	CONTENTS

22	Ana	lysis of variance	487
	22.1	Classical analysis of variance	487
		ANOVA and multilevel linear and generalized linear models '	490
	22.3	Summarizing multilevel models using ANOVA	492
	22.4	Doing ANOVA using multilevel models	494
	22.5	Adding predictors: analysis of covariance and contrast analysis	496
	22.6	Modeling the variance parameters: a split-plot latin square	498
	22.7	Bibliographic note •	501
	22.8	Exercises	501
23	Cau	sal inference using multilevel models '	503
		Multilevel aspects of data collection	503
	23.2	Estimating treatment effects in a multilevel observational study.	506
		Treatments applied at different levels	507
	23.4	Instrumental variables and multilevel modeling	509
	23.5	Bibliographic note	512
	23.6	Exercises I'.	512
24	Mod	lel checking and comparison	513
		Principles of predictive checking	513
	24.2	Example: a behavioral learning experiment •	515
	24.3	Model comparison and deviance	524
	24.4	Bibliographic note	526
	24.5	Exercises	527
25	Mis	sing-data imputation	529
		Missing-data mechanisms	530
	25.2	Missing-data methods that discard data	531
	25.3	Simple missing-data approaches that retain all the data	532
	25.4	Random imputation of a single variable	533
	25.5	Imputation of several missing variables	539
	25.6	Model-based imputation	540
	25.7	Combining inferences from multiple imputations	542
		Bibliographic note	542
	25.9	Exercises	543
Aj	ppen	dixes	545
A	Six	quick tips to improve your regression modeling	547
_		Fit many models	547
	A.2	Do a little work to make your computations faster and more reliable	547
	A.3	Graphing the relevant and not the irrelevant	548
		Transformations	548
		Consider all coefficients as potentially varying	549
		Estimate causal inferences in a targeted way, not as a byproduct	
	, -	of a large regression.	549
В	Sta	tistical graphics for research and presentation	551
	B.I	Reformulating a graph by focusing on comparisons-	552
	B.2	Scatterplots	553
	B.3	Miscellaneous tips	559

CONTE	CONTENTS	
B.4	Bibliographic note	562
B.5	Exercises	563
C Soft	ware	565
C.I	Getting started with R, Bugs, and a text editor	565
C.2	Fitting classical and multilevel regressions in R	565
C.3	Fitting models in Bugs and R	567
C.4	Fitting multilevel models using R, Stata, SAS, and other software	568
C.5	Bibliographic note	573
