

Jianfeng Zhang

Coastal Saline Soil
Rehabilitation and Utilization
Based on Forestry
Approaches in China

Springer

Contents

Part I Characteristics of Salt-Affected Soil and Its Amelioration by Trees

1	Concepts Concerned with Salt-Affected Soils	3
1.1	Concepts Concerned with Salt-Affected Soils	4
1.2	Process of Soil Salinization	5
1.3	Sources of Salts	5
1.4	Generic Properties of Saline Soils	6
	References	7
2	Salt-Affected Soil Resources in China	9
2.1	Global Distribution of Salt-Affected Soils	10
2.2	Saline Soil Distribution in China	11
	References	13
3	Characteristics of Salt-Affected Soil and Its Amelioration by Trees..	15
3.1	Characteristics of Salt-Affected Soil	16
3.2	Functions of Trees in the Reclamation of Salt-Affected Land	17
3.2.1	Decreasing Recharge	18
3.2.2	Increasing Discharge	18
3.3	Saline Soil Remediation by Trees	19
	References	21
4	Causes and Countermeasures of Urban Salinization	23
4.1	Process of Urban Salinization	24
4.2	Impacts of Salinity on Plant Growth and Urban Structure	26
4.3	Strategies for Dealing with Saline Soils	27
	References	29

Part II Principles and Practice of Afforestation in Saline Soils

5	Salinity Tolerance and Tree Planting Techniques	33
5.1	Salinity Tolerance of Trees	34
5.2	Principles and Techniques of Afforestation in Saline Soils	34
5.2.1	Tree Species Selection	35
5.2.2	Improvement of Sites to Reduce Salt Content	36
5.2.3	Seedling Nursing	37
5.2.4	Planting	37
	References	39
6	Agroforestry Systems for Combating Coastal Saline Soil	41
6.1	The Significance of Developing Agroforestry	42
6.2	Eastern China: The Main Environmental Problems	44
6.3	Salinity Sources and the Salinization Process in Eastern China ...	44
6.4	Effects of Agroforestry on Ameliorating Saline Soil	47
6.5	Agroforestry Systems in Eastern China	49
6.5.1	Selecting Tree Species	49
6.5.2	Shelterbelts in or Around Farmlands	50
6.5.3	Intercropping Agricultural Crops with <i>Ziziphus jujuba</i>	51
	References	53
7	Strategies for Reclaiming and Ameliorating Saline Soil in the Yellow River Delta Region	55
7.1	Location and Natural Conditions of the YRD	56
7.2	Salinization Occurrence and Soil Features	58
7.3	Effects of Salt on Plant Growth	58
7.4	Strategies for Reclaiming and Ameliorating Saline Soil	59
7.4.1	Managing the Recharge and Discharge Areas	59
7.4.2	Drainage Practice and Leaching	59
7.4.3	Performance of Tillage	60
7.4.4	Applying Chemical Amendments	60
7.4.5	Adding Manure and Other Fertilizers	60
7.4.6	Planting Crops and Forage	61
7.4.7	Establishing Forests	62
	References	64

Part III Saline Soil Utilization for Biomass Production

8	Biomass Production in Saline Soil	67
8.1	Saline Soil Resources in China	68
8.2	Flora Resources in Saline Soil for Biomass Production	70
8.3	Strategies for Reclaiming and Developing Saline Soil	71
	References	72

9	Potential and Availability of Forest Biomass Energy	
	Production in the East China Sea Regions	75
9.1	Importance of Developing the East China Sea Region	76
9.2	Main Constraints in the Region	76
9.3	Environmental Values of Coastal Areas	78
9.4	Economic Values of Coastal Regions	78
9.5	The Necessity and Feasibility of Developing Bioenergy	79
9.6	Functions of Energy Plants	80
	References	82
Part IV	Wetland Degradation and Water Shortage in the Yellow River Delta Region	
10	Analysis of the Factors Driving Wetland Degradation	85
10.1	General Description of the Location	86
10.2	Wetland Types and Their Spatial Features	87
10.3	Causes of Wetland Degradation	89
10.3.1	Insufficient Water Replenishment	89
10.3.2	Serious Soil Salinization	89
10.3.3	Irrational Land Use	89
10.3.4	Pollution	89
10.4	Ecological Restoration Techniques for Degraded Wetlands	90
10.4.1	Ensuring Water Supply	90
10.4.2	Protecting the Virgin Plant Community	90
10.4.3	Assisting the Regeneration of Virgin Flora	90
10.4.4	Regulating Land Use	91
	References	91
11	Impacts of Water Shortage	93
11.1	Basic Conditions of the Yellow River	93
11.2	Major Environmental Bottleneck	96
11.3	Impact of Climate Change on Runoff in the Yellow River Delta Region	97
11.4	Characteristics of the Water Resources	99
11.5	Current Statuses of Water Supply and Use	100
11.6	Main Questions Relating to Water Exploitation and Sustainable Use	100
11.6.1	Discrepancy Between Water Supply and Demand	100
11.6.2	Water Pollution	101
11.6.3	Water Wastage	101
11.6.4	Over-Exploitation of Groundwater	102
11.7	Countermeasures for Sustainable Use of Water	102
11.7.1	Formulating a Comprehensive Governance Plan	102
11.7.2	Reducing Water Wastage	103

11.7.3	Ensuring Basic Ecological Water Supply	103
11.7.4	Preventing Water Pollution	104
	References	105
Part V Case Study		
12	Establishment of <i>Tamarix chinensis</i> Stands and Its Amelioration of Saline Soil	109
12.1	Introduction	110
12.2	Materials and Methods	110
12.3	Results and Analysis	111
12.4	Conclusions and Discussion	114
	References	115
13	Effects of <i>Nitraria sibirica</i> on the Improvement of Salt-Affected Soil	117
13.1	Introduction	118
13.2	Materials and Methods	119
13.3	Results and Analysis	119
13.4	Discussion and Conclusion	122
	References	123
14	Tree Species Selection for Soil Salinity Resistance	125
14.1	Materials and Methods	126
14.1.1	Site Description	126
14.1.2	Plant Materials	126
14.1.3	Sampling and Analysis Methods	126
14.2	Results and Analysis	128
14.3	Conclusions	132
	References	132
15	Effect of Tree Planting on Preventing Riverbank Soil Erosion	135
15.1	Introduction	136
15.2	Materials and Methods	136
15.2.1	Site Description	136
15.2.2	Plant Materials	137
15.2.3	Sampling and Analysis	138
15.3	Results	138
15.3.1	Tree Growth	138
15.3.2	Effects of Planted Seedlings on Soil Properties	139
15.4	Discussion	141
15.5	Conclusions	141
	References	142
16	Function of Black Locust Plantation on Enhancing Soil Properties ..	145
16.1	Introduction	146
16.2	Methods	147

16.2.1	Study Area and Site Descriptions	147
16.2.2	Experimental Details	148
16.3	Results	149
16.3.1	Soil Salinity	149
16.3.2	Soil Na ⁺ Content and pH	150
16.3.3	Soil Nutrition	151
16.3.4	Soil Enzyme Activity	152
16.4	Discussion	153
16.5	Conclusions	154
	References	154
17	Planting Black Locust (<i>Robinia pseudoacacia</i>) Forest as a Biomass Energy Resource	157
17.1	Introduction	157
17.2	Description of Natural Conditions in the Region	159
17.3	Materials and Methods	160
17.4	Results and Analysis	161
17.4.1	Standard Stock Biomass	161
17.4.2	Current Annual Biomass Increment and Net Annual Biomass Increment of the Tree	162
	References	164
18	Responses of Plant Community Change on Wetland Degradation in Yellow River Delta Region	165
18.1	Introduction	166
18.2	Methods	167
18.2.1	Test Area Description	167
18.2.2	Sites Setting	167
18.2.3	Field Survey and Diversity Analysis	168
18.2.4	Soil Samples Collection and Pretreatment	168
18.2.5	Determination of Soil Properties	169
18.2.6	Determination of Soil Nutrients	169
18.2.7	Determination of Soil Enzyme Activity	169
18.3	Results	170
18.3.1	Flora Features at Different Successional Stages of Wetlands	170
18.3.2	Life Form Structures in Different Successional Stages ...	170
18.3.3	Species Composition and Plant Diversity at Different Successional Stages	171
18.3.4	Sequence of Vegetation Change During Wetland Degradation	172
18.3.5	Wetland Soil Characteristics at Different Succession Stages	173

18.3.6	Soil Physical Properties at Different Successional Stages of Wetlands	175
18.3.7	Soil Enzyme Activity at Different Successional Stages of Wetlands	175
18.4	Discussion and Conclusions	177
	References	178
