MANAGERIAL DECISION MODELING WITH SPREADSHEETS

SECOND EDITION

Nagraj (Raju) Balakrishnan

Professor of Management
Clemson University

Barry Render

Charles Harwood Professor of Management Science
Graduate School of Business, Rollins College

Ralph M. Stair, Jr.

Professor Emeritus of Management Information Systems
Florida State University

PEARSON
Prentice Hall

PRENTICE HALL
Upper Saddle River, New Jersey 07458

CONTENTS

CHAPTER 1 Introduction to Managerial Decision Making 1

1.1 What is Decision Modeling? 2

1.2 Types of Decision Models 2

Deterministic Models 2

Probabilistic Models 3

Quantitative versus Qualitative Data 4

Using Spreadsheets in Decision Modeling 4

1.3 Steps Involved in Decision Modeling 6

Step 1: Formulation 6

Step 2: Solution 8

Step 3: Interpretation and Sensitivity Analysis 8

Decision Modeling in the Real World 9

1.4 Spreadsheet Example of a Decision Model: Tax Computation 9

1.5 Spreadsheet Example of Another Decision Model: Break-Even Analysis 13

Using Goal Seek to Find the Break-Even Point 15

1.6 Possible Problems in Developing Decision Models 17

Defining the Problem 17

Developing a Model 17

Acquiring Input Data 18

Developing a Solution 18

Testing the Solution 19

Analyzing the Results 19

1.7 ***Implementation—Not Just the Final Step*** *19*

Summary 20 Glossary 20 Discussion Questions and Problems 20 Bibliography 22

CHAPTER 2 Linear Programming Models: Graphical and Computer Methods 23

2.1 Introduction 24

2.2 Development of a Linear Programming Model 25

Formulation 25

Solution 25

Interpretation and Sensitivity Analysis 25

Properties of a Linear Programming Model 25

Basic Assumptions of a Linear Programming Model 26

2.3 Formulating a Lhiear Programming Problem 27

Linear Programming Example: Flair Furniture Company 28

Decision Variables 28

The Objective Function 29

Constraints 29

Nonnegativity Constraints and Integer Values 30

Guidelines to Developing a Correct LP Model 30

2.4 Graphical Solution of a Linear Programming Problem with Two Variables 32

Graphical Representation of Constraints 32

Feasible Region 35

Identifying an Optimal Solution by Using Level Lines 36

Identifying an Optimal Solution by Using All Corner Points 39

Comments on Flair Furniture's Optimal Solution 39

Extension to Flair Furniture's LP Model 40

2.5 A Minimization Linear Programming Problem 41

Holiday Meal Turkey Ranch 42

Graphical Solution of the Holiday Meal Turkey Ranch Problem 43

2.6 Special Situations in Solving Linear Programming Problems 44

Redundant Constraints 45

Infeasibility 46

Alternate Optimal Solutions 46

Unbounded Solution 47

2.7 Setting Up and Solving Linear Programming Problems Using Excel's Solver 49

Using Solver to Solve the Flair Furniture Problem 49

Changing Cells 50
Target Cell 51
Constraints 52
Entering Information in Solver 53
Using Solver to Solve Flair Furniture Company's Modified Problem 58
Using Solver to Solve the Holiday Meal Turkey Ranch Problem 59
2.8 Premium Solver for Education 61
2.9 Algorithmic Solution Procedures for Linear Programming Problems 63
Simplex Method 63
Karmarkar's Algorithm 63
Summary 64 Glossary 64 Solved Problems 65 Discussion Questions and Problems 68 Case Study: Mexicana Wire Winding, Inc. 74 Case Study: Golding Landscaping and Plants, Inc. 75 Bibliography 76

CHAPTER 3 **Linear Programming Modeling Applications with Computer Analyses in Excel 79**
3.1 Introduction 80
3.2 Manufacturing Applications 81
Product Mix Problem 81
Make-Buy Decision Problem 84
3.3 Marketing Applications 88
Media Selection Problem 88
Marketing Research Problem 90
3.4 Finance Applications 93
Portfolio Selection Problem 93
Alternate Formulations of the Portfolio Selection Problem 96
3.5 Employee Staffing Applications 98
Labor Planning Problem 98
Extensions to the Labor Planning , Problem 100
Assignment Problem 101
3.6 Transportation Applications 101
Vehicle Loading Problem 101
Expanded Vehicle Loading Problem—Allocation Problem 103
Transportation Problem 105
3.7 Blending Applications 106
Diet Problem 106
Blending Problem 108
3.8 Multiperiod Applications 112
Production Scheduling Problem 112
Sinking Fund Problem 118
Summary 121 Solved Problem 122 Problems 124 Case Study: Chase Manhattan Bank 137 Bibliography 137

CHAPTER 4 **Linear Programming Sensitivity Analysis 139**
4.1 Introduction 140
Why Do We Need to Study Sensitivity Analysis? 140
4.2 Sensitivity Analysis Using Graphs 141
Types of Sensitivity Analysis 142
Impact of Changes in an Objective Function Coefficient 143
Impact of Changes in a Constraint's Right-Hand-Side Value 145
4.3 Sensitivity Analysis Using Solver Reports 149
Solver Reports 150
Sensitivity Report 151
Impact of Changes in a Constraint's Right-Hand-Side Value 152
Impact of Changes in an Objective Function Coefficient 153
4.4 Sensitivity Analysis for a Larger Maximization Example 156
Anderson Electronics Example 156
Some Questions We Want Answered 156
Alternate Optimal Solutions 160
A Z Analyzing Simultaneous Changes by Using the 100% Rule 161
Simultaneous Changes in Constraint RHS Values 161
Simultaneous Changes in OFC Values 162
4.6 Pricing Out New Variables 162
Anderson's Proposed New Product 162
4.7 Sensitivity Analysis for a Minimization Example 165
Burn-Off Diet Drink Example 165
Burn-Off's Excel Solution 165
Answering Sensitivity Analysis Questions for Burn-Off 167
Summary 168 Glossary 168 Solved Problem 169 Discussion Questions and Problems 172 Case Study: Coastal States Chemicals and Fertilizers 182 Bibliography 183

CHAPTER 5 **Transportation, Assignment, and Network Models 185**
5.1 Introduction 186
Transportation Model 186
Transshipment Model 186

Assignment Model 186
Maximal-Flow Model 186
Shortest-Path Model 187
Minimal-Spanning Tree Model 187
5.2 Characteristics of Network Models 187
Types of Arcs 187
Types of Nodes 188
5.3 Transportation Model 190
LP Formulation for Executive Furniture's Transportation Model 191
Solving the Transportation Model Using Excel 193
Alternate Excel Layout for the Transportation Model 193
Unbalanced Transportation Models 194
Alternate Optimal Solutions 197
An Application of the Transportation Model: Facility Location 197
5.4 Transportation Models with Max~Min andMin -Max Objectives 197
5.5 Transshipment Model 200
Executive Furniture Company Example—Revisited 200
LP Formulation for Executive Furniture's Transshipment Model 201
5.6 Assignment Model 203
Fix-It Shop Example 203
Solving Assignment Models 204
LP Formulation for Fix-It Shop's Assignment Model 205
5.7 Maximal-Flow Model 207
Road System in Waukesha, Wisconsin 207
LP Formulation for Waukesha Road System's Maximal-Flow Model 208
5.8 *Shortest-Path Model 211*
Ray Design Inc. Example 212
LP Formulation for Ray Design Inc.'s ' Shortest-Path Model 212
5.9 Minimal-Spanning Tree Model 214
Lauderdale Construction Company Example 214
Summary 217 Glossary 217 Solved Problems 218 Discussion Questions and Problems 224 Case Study: Old Oregon Wood Store 232 Case Study: Custom Vans Inc. 233 Case Study: Binder's Beverage 235 Bibliography 236

CHAPTER 6 Integer, Goal, and Nonlinear Programming Models 237
6.1 Introduction 238
Integer Programming Models 238
Goal Programming Models 238
Nonlinear Programming Models 238
6.2 Models with General Integer Variables 239
Harrison Electric Company 239
Using Solver to Solve Models with General Integer Variables 242
How Are IP Models Solved? 244
Solver Options 245
Should We Include Integer Requirements in a Model? 247
6.3 Models with Binary Variables 248
Portfolio Selection at Simkin and Steinberg 248
Set Covering Problem at Sussex County 252
6.4 Mixed Integer Models: Fixed-Charge Problems 254
Locating a New Factory for Hardgrave Machine Company 255
6.5 Goal Programming Models 259
Goal Programming Example: Wilson Doors Company 259
Solving Goal Programming Models with Weighted Goals 262
Solving Goal Programming Models with Ranked Goals 265
Comparing the Two Approaches for Solving GP Models 271
6.6 Nonlinear Programming Models 271
Why Are NLP Models Difficult to Solve? 271
Solving Nonlinear Programming Models Using Solver 273
Computational Procedures for Nonlinear Programming Problems 278
Summary 278 Glossary 279 Solved Problems 279 Discussion Questions and Problems 285 Case Study: Schank Marketing Research 292 Case Study: Oakton River Bridge 292 Case Study: PuyallupMall 293 Bibliography 294

CHAPTER 7 Project Management 295
7.1 Introduction 296
Phases in Project Management 296
Use of Software Packages in Project Management 299
7.2 Project Networks 300
Identifying Activities 300
Identifying Activity Times and Other Resources 301

L

Project Management Techniques: PERT and CPM 301
Project Management Example: General Foundry, Inc. 302
Drawing the Project Network 303
7.3 Determining the Project Schedule 305
Forward Pass 306
Backward Pass 308
Calculating Slack Time and Identifying the Critical Path(s) 310
Total Slack Time versus Free Slack Time 311
7.4 Variability in Activity Times 313
PERT Analysis 313
Probability of Project Completion 316
Determining Project Completion Time for a Given Probability 317
Variability in Completion Time of Noncritical Paths 318
7.5 Managing Project Costs and Other Resources 319
Planning and Scheduling Project Costs: Budgeting Process 319
Monitoring and Controlling Project Costs 321
Managing Other Resources 323
7.6 Project Crashing 324
Crashing General Foundry's Project (Hand Calculations) 326
Crashing General Foundry's Project Using Linear Programming 329
Using Linear Programming to Determine Earliest and Latest Starting Times 331
7.7 Using Microsoft Project to Manage Projects 332
Creating a Project Schedule Using Microsoft Project 333
Tracking Progress and Managing Costs Using Microsoft Project 336 <
Summary 340 Glossary 340 Solved Problems 341 Discussion Questions and Problems 342 Case Study: Haygood Brothers Construction Company 350 Case Study: Family Planning Research Center of Nigeria 351 Bibliography 352

CHAPTER 8 Decision Analysis 355
8.1 Introduction 356
8.2 The Five Steps in Decision Analysis 356
Thompson Lumber Company Example 356
8.3 Types of Decision-Making Environments 358
8.4 Decision Making Under Uncertainty 360
Maximax Criterion 361
Maximin Criterion 361
Criterion of Realism (Hurwicz) 361
Equally Likely (Laplace) Criterion 362
Minimax Regret Criterion 362
Using Excel to Solve Decision-Making Problems under Uncertainty 363
*8.5 Decision Making **Under Risk** 365*
Expected Monetary Value 365
Expected Opportunity Loss 366
Expected Value of Perfect Information 367
Using Excel to Solve Decision-Making Problems under Risk 368
Decision Trees 368
Folding Back a Decision Tree 370
8.7 Using TreePlan to Solve Decision Tree Problems with Excel 372
Loading TreePlan 372
Creating a Decision Tree Using TreePlan 372
8.8 Decision Trees for Multistage Decision-Making Problems 377
A Multistage Decision-Making Problem for Thompson Lumber 378
Expanded Decision Tree for Thompson Lumber 378
Folding Back the Expanded Decision Tree for Thompson Lumber 380
Expected Value of Sample Information 382
8.9 Estimating Probability Values Using Bayesian Analysis 383
Calculating Revised Probabilities 384
Potential Problems in Using Survey Results 386
8.10 Utility Theory 386
Measuring Utility and Constructing a Utility Curve 387
Utility as a Decision-Making Criterion 390
Summary 392 Glossary 392 Solved Problems 393 Discussion Questions and Problems 397 Case Study: Ski Right 404 Case Study: Blake Electronics 405 Bibliography 407

CHAPTER 9 Queuing Models 409
9.1 Introduction 410
Approaches for Analyzing Queues 410
9.2 Queuing System Costs 411
9.3 Characteristics of a Queuing System 412
Arrival Characteristics 412
Queue Characteristics 415

Service Facility Characteristics 416
Measuring the Queue's Performance 418
Kendall's Notation for Queuing Systems 419
Variety of Queuing Models Studied Here 419
9.4 Single-Server Queuing System with Poisson Arrivals and Exponential Service Times (M/M/l Model) 420
Assumptions of the M/M/l Queuing Model 421
Operating Characteristic Equations for an M/M/l Queuing System 421
Arnold's Muffler Shop Example 422
Using ExcelModules for Queuing Model Computations 422
Cost Analysis of the Queuing System 426
Increasing the Service Rate 426
9.5 Multiple-Server Queuing System with Poisson Arrivals and Exponential Service Times (M/M/s Model) 427
Operating Characteristic Equations for an M/M/s Queuing System 428
Arnold's Muffler Shop Revisited 429
Cost Analysis of the Queuing System 430
9.6 Single-Server Queuing System with Poisson Arrivals and Constant Service Times (MIDI 1 Model) 431
Operating Characteristic Equations for an M/D/l Queuing System 431
Garcia-Golding Recycling, Inc. 432
Cost Analysis of the Queuing System 433
9.7 Single-Server Queuing System with Poisson Arrivals and General Service Times (MIG/1 Model) 433
Operating Characteristic Equations for an M/G/l Queuing System 434
Meetings with Professor Crino 435
Using Excel's Goal Seek to Identify Required Model Parameters 436
9.8 Multiple-Server Queuing System with Poisson Arrivals, Exponential Service Times, and Finite Population Size (M/M/s/oo/N Model) 438
Operating Characteristic Equations for the Finite Population Queuing System 438
Department of Commerce Example 439
Cost Analysis of the Queuing System 440
9.9 More Complex Queuing Systems 441
Summary 442 Glossary 442 Solved Problems 443 Discussion Questions and Problems 446 Case Study: New England Foundry 450 Case Study: Winter Park Hotel 452 Bibliography 452

CHAPTER 10 Simulation Modeling 453
10.1 Introduction 454
What Is Simulation? 454
Advantages and Disadvantages of Simulation 455
10.2 Monte Carlo Simulation 457
Step 1: Establish a Probability Distribution for Each Variable 457
Step 2: Simulate Values from the Probability Distributions 458
Step 3: Repeat the Process for a Series of Replications 460
10.3 Role of Computers in Simulation 461
Types of Simulation Software Packages 462
Random Generation from Some Common Probability Distributions Using Excel 462
10.4 Simulation Model to Compute Expected Profit 467
Setting Up the Model 468
Replication by Copying the Model 470
Replication Using a Data Table 470
Analyzing the Results 472
70.5 *Simulation Model of an Inventory Problem 473*
Simkin's Hardware Store 474
Setting Up the Model 475
Computation of Costs 478
Replication Using Data Table 478
Analyzing the Results 480
Using Scenario Manager to Include Decisions in a Simulation Model 480
Analyzing the Results 482
10.6 Simulation Model of a Queuing Problem 483
Denton Savings Bank 483
Setting Up the Model 483
Replication Using Data Table 485
Analyzing the Results 486
10.7 Simulation Model of a Revenue Management Problem 486
Judith's Airport Limousine Service 486
Setting Up the Model 487
Replicating the Model Using Data Table and Scenario Manager 489
Analyzing the Results 490
10.8 Simulation Model of an Inventory Problem Using Crystal Ball 491
Reason for Using Add-in Programs 491
Simulation of Simkin's Hardware Store Using Crystal Ball 491

Replicating the Model 493
Using Decision Table in Crystal Ball 495
10.9 Simulation Model of a Revenue Management Problem Using Crystal Ball 501
Setting Up the Model 501
Using Decision Table to Identify the Best Reservation Limit 502
10.10 Other Types of Simulation Models 504
Operational Gaming 504
Systems Simulation 505
Summary 505 Glossary 506 Solved Problems 506 Discussion Questions and Problems 515 Case Study: Alabama Airlines 524 Case Study: Abjar Transport Company 525 Bibliography 526

CHAPTER 11 Forecasting Models 527
11.1 Introduction 528
11.2 Types of Forecasts 528
Qualitative Models 529
Time-Series Models 529
Causal Models 529
11.3 Qualitative Forecasting Models 530
11.4 Measuring Forecast Error 531
11.5 Basic Time-Series Forecasting Models 532
Components of a Time Series 532
Stationary and Nonstationary Time-Series Data 533
Moving Averages 534
Using ExcelModules for Forecasting Model Computations 534
Weighted Moving Averages 539
Exponential Smoothing 543
/1.6 Trend and Seasonality In Time-Series Data 547
Linear Trend Analysis 547
Scatter Diagram 547
Least-Squares Procedure for Developing a Linear Trend Line 550
Seasonality Analysis 554
11.7 Decomposition of a Time Series 556
Multiplicative Decomposition Example: Sawyer Piano House 556
Using ExcelModules for Multiplicative Decomposition 557
11.8 Causal Forecasting Models: Simple and Multiple Regression 561
Causal Simple Regression Model 562
Causal Simple Regression Using ExcelModules 563
Casual Simple Regression Using Excel's Analysis ToolPak (Data Analysis) 568
Causal Multiple Regression Model 572
Causal Multiple Regression Using ExcelModules 573
Causal Multiple Regression Using Excel's Analysis ToolPak (Data Analysis) 576
Summary 581 Glossary 581 Solved Problems 582 Discussion Questions and Problems 586 Case Study: North-South Airline 593 Case Study: Forecasting Football Game Attendance at Southwestern University 594 Bibliography 595

CHAPTER 12 Inventory Control Models—*appears in its entirety on Student CD-ROM*

APPENDIX A Probability Concepts and Applications **598**

APPENDIX B Useful Excel Commands and Procedures for Installing ExcelModules **625**

APPENDIX C Areas Under the Standard Normal Curve **637**

APPENDIX D Brief Solutions to All Odd-Numbered End-Of-Chapter Problems **638**

INDEX 643
