PostGIS Cookbook

Over 80 task-based recipes to store, organize, manipulate, and analyze spatial data in a PostGIS database

Paolo Corti

Thomas J Kraft

Stephen Vincent Mather

Bborie Park

PUBLISHING

BIRMINGHAM - MUMBAI

Table of Contents

Preface	1
Chapter 1: Moving Data In and Out of PostGIS	7
Introduction	7
Importing nonspatial tabular data (CSV) using PostGIS functions	7
Importing nonspatial tabular data (CSV) using GDAL	12
Importing shapefiles with shp2pgsql	17
Importing and exporting data with the ogr2ogr GDAL command	21
Handling batch importing and exporting of datasets	25
Exporting data to the shapefile with the pgsql2shp PostGIS command	33
Importing OpenStreetMap data with the osm2pgsql command	34
Importing raster data with the raster2pgsql PostGIS command	39
Importing multiple rasters at a time	45
Exporting rasters with the gdai_translate and gdalwarp GDAL commands	51
Chapter 2: Structures that Work	55
Introduction	55
Using geospatial views	56
Using triggers to populate a geometry column	58
Structuring spatial data with table inheritance	62
Extending inheritance – table partitioning	67
Normalizing imports	71
Normalizing internal overlays	76
Using polygon overlays for proportional census estimates	80

Table of Contents

Chapter 3: Working with Vector Data – The Basics	85
Introduction	85
Working with GPS data	86
Fixing invalid geometries	92
GIS analysis with spatial joins	96
Simplifying geometries	101
Measuring distances	107
Merging polygons using a common attribute	110
Computing intersections	112
Clipping geometries to deploy data	116
Simplifying geometries with PostGIS topology	120
Chapter 4: Working with Vector Data – Advanced Recipes	<u>127</u>
Introduction	127
Improving proximity filtering with KNN	128
Improving proximity filtering with KNN – advanced	132
Rotating geometries	137
Improving ST_Polygonize	140
Translating, scaling, and rotating geometries – advanced	142
Generating detailed building footprints from LiDAR	148
Using external scripts to embed new	152
functionality in order to calculate a Voronoi diagram	152
Using external scripts to embed other	156
libraries in order to calculate a Voronoi	156
diagram – advanced	156
Chapter 5: Working with Raster Data	<u>173</u>
Introduction	173
Getting and loading rasters	174
Working with basic raster information and analysis	177
Performing simple map-algebra operations	182
Combining geometries with rasters for analysis	187
Converting between rasters and geometries	189
Processing and loading rasters with GDAL VRT	194
Warping and resampling rasters	197
Performing advanced map-algebra operations	200
Executing DEM operations	206
Sharing and visualizing rasters through SQL	209

Chapter 6: Working with pgRouting Introduction Startup – Dijkstra routing Loading data from OpenStreetMap and finding the shortest path using A* Driving distance/service area calculation Calculating demographics using driving distance Extracting the centerlines of polygons	215 215 215 220 223 229 232
Chapter 7: Into the Nth Dimension Introduction Importing LIDAR data Performing 3D queries <i>on</i> a LIDAR point cloud Constructing and serving buildings 2.5 D Using ST_Extrude to extrude building footprints Creating arbitrary 3D objects for PostGIS	241 242 245 247 256 257
Exporting models as X3D for the Web Reconstructing Unmanned Aerial Vehicle (UAV) image footprints with PostGIS 3D UAV photogrammetry in PostGIS – point cloud UAV photogrammetry in PostGIS – orthorectification UAV photogrammetry in PostGIS – DSM creation	261 265 272 274 279
Chapter 8: PostGIS Programming Introduction Writing PostGIS vector data with Psycopg Writing PostGIS vector data with OGR Python bindings Writing PostGIS functions with PL/Python Geocoding and reverse-geocoding using the GeoNames datasets Geocoding using the OSM datasets with trigrams Geocoding with geopy and PL/Python Importing netCDF datasets with Python and GDAL	281 284 291 297 302 306 312 316
Chapter 9: PostGIS and the Web Introduction Creating WMS and WFS services with MapServer Creating WMS and WFS services with GeoServer Creating a WMS Time with MapServer Consuming WMS services with OpenLayers Consuming WMS services with Leaflet	325 325 326 339 352 359 365

Table of Contents

Consuming WFS-T services with OpenLayers	369
Developing web applications with GeoDjango – part 1	375
Developing web applications with GeoDjango – part 2	386
Chapter 10: Maintenance, Optimization, and Performance Tuning	393
Introduction	393
Organizing the database	394
Setting up the correct data privilege mechanism	397
Backing up the database	403
Using indexes	405
Clustering for efficiency	409
Optimizing SQL queries	410
Migrating a PostGIS database to a different server	421
Replicating a PostGIS database with streaming replication	423
Chapter 11: Using Desktop Clients	429
Introduction	429
Adding PostGIS layers – QGIS	430
Using the Database Manager plugin – QGIS	434
Adding PostGIS layers – OpenJUMP GIS	443
Running database queries – OpenJUMP GIS	449
Adding PostGIS layers – gvSIG	453
Adding PostGIS layers – uDig	457
Index	461
