Contents

List of tables	ix
Preface	xi
Acknowledgements	xiii
Guide to the book	xiv
Symbols and abbreviations	xvii

Part 1 Behaviour of structures

1 Introduction 3

Structural mechanics	3
Structural design	3
Design methods and design philosophies	6
Characteristic strength and design strength of materials	10
Mathematical models	13
Forces	14
Exercises	17

2 Loads on buildings and structures 18

Introduction	18
Load types	18
Characteristic load	24
Design loads and partial factors of safety	24
Load combinations	24
Exercises	34

3 Concurrent coplanar forces 36

Triangle of forces	36
Parallelogram of forces	38
Rectangular components	40
Polygon of forces	43
Exercises	46

4 Non-concurrent coplanar forces	51
The link polygon	53
Application of the link polygon	56
Exercises	62
5 Moments of forces	69
Measurement of moments	70
Conditions of equilibrium	75
Resultant of parallel forces	77
Couples	79
Beam reactions	80
Exercises	85
6 Framed structures	90
Perfect, imperfect and redundant pin-jointed frames	90
Graphical solutions for frames – force diagrams	93
Calculation methods for frames	102
Exercises	113
7 Construction materials	117
General	117
Suitability for use	118
Steel, concrete and timber as construction materials	120
Stress	128
Strain	132
Elasticity	133
Behaviour of steel in tension – yield point	136
Strength of materials and factor of safety	138
Stresses in composite members – modular ratio	139
Exercises	141
8 Shear force and bending moment	144
Shear force	144
Bending moment	147
Shear force and bending moment diagrams	149
Exercises	165
9 Properties of sections	170
The centre of gravity or centroid	170
Moment of inertia	176
Exercises	189

Part 2 Understanding structural design**10 Introduction to structural stability, durability
and environmental conditions 197**

General	197
Structures and environmental conditions	197
Assessment of structural safety and risk at the design stage	197
Design for durability and sustainability	198
Corrosion of steel bars in reinforced concrete elements and members	199
Why corrosion takes place and what it means in terms of chemical reactions	199
Exercises	201

11 Simple beam design 202

The general theory of bending	202
Elastic section modulus – symmetrical sections	207
Elastic section modulus – non-symmetrical sections	213
Limit state design	219
Exercises	222

12 Beams of two materials 231

Flitch beams	231
Reinforced concrete beams	235
Basis of design – elastic theory method	236
Basis of design – load factor method	243
Basis of design – limit state design	245
Exercises	248

13 Deflection of beams 250

Factors affecting deflection	250
Derivation of deflection formulae	252
Span/depth ratios	258
Deflection of reinforced concrete beams	259
Exercises	260

14 Axially loaded columns 262

Design factors	263
Reinforced concrete columns	273
Exercises	279

15 Connections	280
Riveting and bolting	280
High strength friction grip bolts	289
Welding	290
Exercises	292
16 Addition of direct and bending stresses	295
Exercises	303
17 Portal frames and arches	306
Portal frames	306
Arches	308
Portal frame analysis	310
Analysis of ribbed dome structure	320
Exercises	321
18 Gravity retaining walls	323
Horizontal forces – wind pressure	323
Horizontal forces – liquid pressure	324
Horizontal forces – soil pressure	325
Modes of failure – sliding	327
Modes of failure – overturning	329
Modes of failure – overstressing	330
Exercises	339
Computer software	342
Answers to exercises	343
Bibliography	357
Index	358
