CONTENTS

List of Contributors.....	v
Contents.....	vii
Preface/Introduction.....	xi
PART I: PERSPECTIVES ON MOTOR MEMORY, MOTOR CONTROL, ACTION	
1. On the integration of the verbal and motor domains	
<u>Jack A. Adams</u>	3
Introduction	
Domain integration and psychology	
Memory for movements	
2. Toward a dynamical account of motor memory and control	
<u>Elliot L. Saltzman and J. A. Scott Kelso</u>	17
Motor memory and control: Critical remarks on some questionable assumptions	
Motor control: A generalized dynamical perspective	
Motor memory revisited	
Closing comments	
3. Memory for movement: Discussion of Adams and Saltzman and Kelso	
<u>Robert B. Wilberg</u>	39
A little history	
The rise of knowledge	
Motor memory vs. memory for movement	
From verbal to motor memory	
The problem of regress	
4. Memory, action, and motor control	
<u>Beth Kerr</u>	47
5. Does motor skill automation require a theory of attention	
<u>George E. Stelmach and Barry G. Hughes</u>	67

PART II: WELL-LEARNED SKILL: MEMORY, ATTENTION, AND AUTOMATICITY

6.	Vertical processes and motor performance	
	<u>G. Namikas</u>	95
	The nature of well-learned motor skills	
	How are well-learned motor skills used?	
7.	Attention theory and mechanisms for skilled performance	
	<u>Walter Schneider and Arthur D. Fisk</u>	119
	Mechanisms of skilled performance	
	Review of empirical evidence and description of mechanisms	
	Controlled processing in skilled behavior	
	Relation to theories of motor skill	
	Summary and an illustration	
8.	On the underlying structure of well-learned motor responses: A discussion of Namikas and Schneider and Fisk	
	<u>Richard A. Schmidt</u>	145
	Representations of well-learned tasks	
	Automaticity	
	Concluding remarks	
9.	Human movement organization and learning as revealed by variability of movement, use of kinematic information and Fourier analysis	
	<u>Ronald G. Marteniuk and Sandra K. E. Romanow</u> ..	167
	Introduction	
	Rationale for an experiment	
	Method	
	Results and discussion	
	A synthesis	
10.	Towards a brain model of automatization: A short essay	
	<u>Harry A. Whitaker</u>	199

PART III: PLANS AND ACTION IN SPEECH AND LIMB MOVEMENTS

11.	A theory of the representation and enactment of intentions	
	<u>Donald G. MacKay</u>	217
	The representation of intentions: Content nodes	
	The activation of intentions	
	The timing of intentions	
	The execution of intentions: An illustration	
	Distributed control, tuning and creativity in the theory	
	Applications of the theory	
12.	The movement of precuing technique: Assumptions, applications, and extentions	
	<u>David A. Rosenbaum</u>	231
	Introduction	
	The basic method	
	An illustration of how the method works	
	Applications of the basic method	
	Extensions of the basic method	
	Concluding remarks	
13.	Apraxia of language vs. apraxia of speech	
	<u>Hugh W. Buckingham</u>	275
14.	Neuropsychological perspectives on apraxia and related action disorders	
	<u>Eric A. Roy</u>	293
	Reflections on the action system	
	Disorders to the action system	
	Considerations for further research	

PART IV: CONTEXT-RELATED EFFECTS IN MEMORY AND MOTOR CONTROL

15.	Context effects in the use of relational information in recognition memory	
	<u>Robert C. Mathews, Laurie Heffernan, and Randell Elkins</u>	323
	Introduction	
	Two types of context effects on recognition memory	
	Three context deletion experiments	
	Relational information and its use in recognition memory	

Experiment 4	
Conclusions about the use of relation information in recognition memory	
16. Context effects in memory and learning movement information	
<u>John B. Shea and Susan T. Zimny</u>	345
Introduction	
A theoretical framework	
The experimental evidence	
A contextual interpretation of process and structure	
17. Insights into memory and control in motor behavior through the study of context effects: A discussion of Mathews et al., and Shea and Zimny	
<u>Richard A. Magill</u>	367
Introduction	
Context effects and memory representation	
Context effects and the acquisition-test relationship	
Context effects and motor control	
Context and the use of stored information	
Concluding remarks	
Author index.....	377
Subject index.....	391
