<i>Preface to the Second Edition</i>	v
<i>Preface to the First Edition</i>	vii
1. Introduction	1
1.1 Directionality	3
1.2 Intensity	4
1.3 Monochromacity	5
1.4 Coherence	6
2. Einstein's Quantum Theory of Radiation	7
2.1 Einstein coefficients	7
2.2 Momentum transfer	11
2.3 Life-time	12
2.4 Possibility of amplification	12
2. Interaction of Radiation with Matter	15
3.1 Time Dependent Perturbation Theory	16
3.2 Electric Dipole Interaction	19
3.3 Quantum Electrodynamics	25
3.3.1 Creation and annihilation operators	25
3.3.2 Fock States	27
3.3.3 Quantization of the field	27
3.3.4 Zero-point energy	31
3.3.5 Coherent-state description of the electromagnetic field	32
3.3.6 Interaction of radiation with matter	36
4. Masers	42
4.1 The two-level Maser system: Ammonia maser	43
4.2 Hydrogen maser	47
4.3 The three-level maser system	48
5. Theory of Some Simple Optical Processes	51
5.1 Waves and interference	51
5.2 Coherence	53
5.3 Coherence of the field and the size of the source	56
5.4 Visibility and the size of the source	57
5.5 Coherence and monochromacity	59
5.6 Kinetics of optical absorption	60
5.7 Shape and width of spectral lines	63
5.8 Line broadening mechanisms	64
5.8.1 Natural or intrinsic broadening	65
5.8.2 Collision broadening	67
5.8.3 Doppler broadening	70
6. Basic Principles of Lasers	73
6.1 Population inversion	73
6.2 Laser pumping	74
6.2.1 A two-level system	74
6.2.2 A three-level system	76

x *Contents*

6.3 Resonators	78	
6.4 Vibrational modes of a resonator	78	
6.5 Number of modes per unit volume	79	
6.6 Open resonators	81	
6.7 Confocal resonator	83	
6.8 Quality factor Q	83	
6.9 Losses inside the cavity	84	
6.10 The threshold condition	85	
6.11 Quantum yield	89	
7. Solid State Lasers		91
7.1 The ruby laser – a three-level system	91	
7.2 Pumping power	94	
7.3 Spiking	99	
7.4 U^{3+} in CaF_2 laser: a four-level system	100	
7.5 Neodymium lasers	101	
(a) Nd : YAG laser	101	
(b) Nd : Glass laser	102	
7.6 HO^{3+} : YLF laser	103	
7.7 Other types of solid state lasers	104	
8. Gas Lasers		105
8.1 Neutral atom gas lasers : Helium-Neon laser	105	
8.2 Copper vapour laser	111	
8.3 Ion lasers	112	
8.3.1 Argon-ion laser	112	
8.3.2 Krypton and mercury-ion lasers	114	
8.4 Metal vapour laser	114	
8.4.1 He-Cd laser	114	
8.4.2 He-Se laser	115	
8.5 Molecular gas lasers	116	
8.5.1 CO_2 laser	116	
8.5.2 Electroionization lasers	121	
8.5.3 Gasdynamic laser	122	
8.5.4 Vibronic lasers	123	
8.6 Excimer lasers	125	
9. Semiconductor Lasers		127
9.1 Central features of semiconductor lasers	127	
9.2 Intrinsic semiconductor lasers	129	
9.3 Doped semiconductors	129	
9.4 Condition for laser action	131	
9.5 Injection lasers	134	
9.6 Injection laser threshold current	136	
9.7 Advances in semiconductor lasers	136	
9.8 C^3 laser	138	
10. Liquid-, Dye- and Chemical Lasers		139
10.1 Liquid lasers	139	
10.2 Dye lasers	141	
10.3 Chemical lasers	145	
10.3.1 HCl laser	146	
10.3.2 HF laser	146	

10.3.3	DF-CO ₂ laser	148	
10.3.4	CO-chemical laser	149	
11.	Dynamics of the Laser Processes and Advances in Laser Physics		150
11.1	Production of a giant pulse— <i>Q</i> -switching	150	
11.1.1	Mechanical shutter	150	
11.1.2	Electro-optical shutters	151	
11.1.3	Shutters using saturable dyes	153	
11.1.4	Peak power emitted during the pulse	154	
11.2	Giant pulse dynamics	155	
11.3	Laser amplifiers	158	
11.4	Mode locking	160	
11.5	Ultra-short light pulses	162	
11.6	Mode pulling	162	
11.7	Hole burning	166	
11.8	Distributed Feedback Lasers	168	
11.9	Gamma ray Laser	170	
12.	Holography		171
12.1	Principle of holography	171	
12.1.1	Recording of the hologram	172	
12.1.2	Reconstruction of the image	172	
12.2	Theory	173	
12.3	Some distinguishing characteristics of holographs	175	
12.4	Practical applications of holography	176	
12.5	Advances in holography	177	
13.	Non-Linear Optics		178
13.1	Harmonic generation	178	
13.2	Second harmonic generation	180	
13.3	Phase matching	181	
13.4	Third harmonic generation	184	
13.5	Optical mixing	185	
13.6	Parametric generation of light	186	
13.7	Self-focusing of light	187	
14.	Multiphoton Processes		189
14.1	Multiquantum photoelectric effect	189	
14.2	Two-photon processes	190	
14.3	Theory of two Photon Processes	191	
14.4	Experiments in two-photon processes	194	
14.4.1	CaF ₂ :Eu ⁺⁺ crystals	194	
14.4.2	Cesium vapour	195	
14.4.3	Anthracene	196	
14.4.4	KI	196	
14.4.5	Two-photon effect in a semiconductor	197	
14.4.6	Two-photon ionization	197	
14.5	Violation of the square law dependence	197	
14.6	Doppler-free two-photon spectroscopy	198	
14.7	Multiphoton processes	198	
14.8	Three-photon processes	198	
14.9	Second harmonic generation	199	
14.10	Parametric generation of light	199	

xii *Contents*

14.11 Parametric light oscillator	200	
14.12 Frequency upconversion	201	
14.13 Phase conjugate Optics	201	
15 Laser Spectroscopy		205
15.1 Rayleigh and Raman scattering	205	
15.2 Stimulated Raman effect	207	
15.3 Hyper-Raman effect	209	
15.3.1 Classical treatment	209	
15.3.2 Quantum mechanical treatment	210	
15.4 Coherent anti-Stokes Raman scattering (CARS)	211	
15.5 Spin-flip Raman laser	211	
15.6 Free-electron laser (FEL)	214	
15.7 Photo-acoustic Raman spectroscopy (PARS)	215	
15.8 Brillouin scattering	216	
15.9 Saturation Absorption spectroscopy	218	
15.10 Doppler-free Two Photon Spectroscopy	220	
16. Some Laser Induced Phenomena		222
16.1 Modulation of an electron wave by a light wave	222	
16.2 Laser induced collision processes—Pair excitation	223	
16.3 Multi-photon ionization	229	
16.4 Single atom detection with lasers	230	
16.4.1 Fluorescence methods	230	
16.4.2 Ionization methods	231	
16.5 Laser cooling and trapping of neutral atoms	231	
17. Applications of Lasers		235
17.1 Some experiments of fundamental importance	235	
17.2 Ether drift	236	
17.3 Absolute rotation of the earth	236	
17.4 “Counting of atoms”	237	
17.5 Isotope separation	237	
17.6 Plasma	239	
17.7 Thermonuclear fusion	239	
17.8 Lasers in chemistry	240	
17.9 Communication by laser	241	
17.10 Ranging	243	
17.11 Atmospheric Optics	244	
17.12 Lasers in astronomy	244	
17.13 Lasers in biology	245	
17.14 Lasers in medicine	245	
17.15 Lasers in industry	245	
<i>Appendix A: Physical constants</i>		247
<i>Appendix B: Conversion factors for energy units</i>		247
<i>References</i>		249
<i>Index</i>		259
