

AN INTRODUCTION TO SCIENTIFIC RESEARCH

E. BRIGHT WILSON, JR.

*Theodore William Richards Professor of
Chemistry, Emeritus, Harvard University*

DOVER PUBLICATIONS, INC.
New York

CONTENTS

PREFACE TO THE DOVER EDITION	iii
PREFACE TO THE FIRST EDITION	v
INTRODUCTION	xiii

CHAPTER 1. THE CHOICE AND STATEMENT OF A RESEARCH PROBLEM

1.1 Problems in Pure Science	1
1.2 Problems in Applied Science.	3
1.3 The Cost of Experiments	6
1.4 Priority and Similar Questions	7
1.5 Moral Considerations.	8

CHAPTER 2. SEARCHING THE LITERATURE

2.1 Necessity for a Search	10
2.2 The Structure of the Scientific Literature	11
2.3 Suggestions for Searching	17
2.4 Notes and Indexes	18

CHAPTER 3. ELEMENTARY SCIENTIFIC METHOD

3.1 Authority in Science	21
3.2 Observation and Description	22
3.3 Cause and Effect	23
3.4 Analysis and Synthesis	24
3.5 Hypothesis.	25
3.6 Deduction	27
3.7 The Testing of Hypotheses	27
3.8 Models and Mathematics	30
3.9 The Search for Causes	32
3.10 Fallacies	34
3.11 Notes and References.	35

CHAPTER 4. THE DESIGN OF EXPERIMENTS

4.1 Some First Principles.	36
4.2 Variables	37
4.3 Comparative versus Absolute Measurements	38
4.4 Choice of Sample	38
4.5 Controls and Standards	40

4.6	Psychological Bias	43
4.7	Replication	46
4.8	Factorial Design	48
4.9	Irrelevant Variables	52
4.10	Randomization in Factorial and Other Experiments	54
4.11	Level of Significance	57
4.12	Fractional Replication and Confounding	61
4.13	Latin Squares	63
4.14	Detection of Rare Events	66
4.15	Notes and References.	67

CHAPTER 5. THE DESIGN OF APPARATUS

5.1	The Need for Specifications	69
5.2	Improvisation versus Planning	71
5.3	The Importance of Accessibility and Demountability	73
5.4	Questions of Operating Convenience	75
5.5	Test Facilities	77
5.6	Control of Disturbing Factors	78
5.7	Direct versus Null Measurements	82
5.8	Calibration and Standards	83
5.9	Use of Standard Parts	84
5.10	Interconnection of Adjustments.	85
5.11	Automatic Recording and Other Automatic Mechanisms	86
5.12	Amplification and Magnification	90
5.13	Measurement of Quantities Which Vary with Time	93
5.14	Matching of Impedances.	96
5.15	Feedback	97
5.16	Servo Systems.	100
5.17	Modulation	102
5.18	Kinematic Design.	104
5.19	Wear in Mechanical Parts	108
5.20	Use of Self-correcting Methods of Manufacture	109
5.21	Some Remarks on Electrical Apparatus	110
5.22	Some Remarks on Optical Apparatus	112
5.23	"Noise" as a Fundamental Limitation on All Measurements	116
5.24	Some Causes of Failure	119
5.25	Notes and References.	121

CHAPTER 6. THE EXECUTION OF EXPERIMENTS

6.1	Some General Suggestions	127
6.2	Notebooks and Records	130
6.3	Psychological Questions	134
6.4	Bringing an Apparatus under Control	137
6.5	Search Principles	140

6.6	Trouble Shooting	145
6.7	Getting the Most out of Observations	148
6.8	Notes and References	149

CHAPTER 7. CLASSIFICATION, SAMPLING, AND MEASUREMENT

7.1	Classes of Things	151
7.2	Practical Definition of Classes	151
7.3	Induction	153
7.4	Sampling	154
7.5	Induction in Science	159
7.6	Further Remarks on Sampling	161
7.7	The Definition of Measurable Scientific Quantities	164
7.8	The Operational Viewpoint	166
7.9	Notes and References	167

CHAPTER 8. THE ANALYSIS OF EXPERIMENTAL DATA

8.1	The Testing of Hypotheses	169
8.2	Testing More Complex Hypotheses	175
8.3	Results Which Appear "Too Good"	176
8.4	The Estimation of Parameters	177
8.5	Experiment as a Sampling Process	178
8.6	Sampling for Attributes—The Binomial Distribution	179
8.7	Sampling from a Normal Population	189
8.8	Accuracy of Counting: The Poisson Distribution	191
8.9	The Multinomial Distribution	195
8.10	The χ^2 Distribution	197
8.11	The Analysis of Variance	202
8.12	Curve Fitting	215
8.13	The Method of Least Squares	217
8.14	Sequential Experiments	223
8.15	Methods of Point Estimation	226
8.16	Notes and References	228

CHAPTER 9. ERRORS OF MEASUREMENT

9.1	Classification of Errors	232
9.2	The Normal Law of Error	234
9.3	Applicability of the Normal Law	246
9.4	Treatment of Nonnormal Data	247
9.5	Importance of Size of Scale Divisions	251
9.6	Limits on Gain in Accuracy by Replication	252
9.7	Ways of Expressing Limits of Error	254
9.8	The Rejection of Observations	256
9.9	Quality Control and Experimentation	258

9.10	The Quality-control Chart and Other Tests	263
9.11	Compounding of Errors	272
9.12	Notes and References.	274

CHAPTER 10. PROBABILITY, RANDOMNESS, AND LOGIC

10.1	Probability.	277
10.2	Random Processes	283
10.3	The Practical Use of Tables of Random Numbers	286
10.4	The Algebra of Classes	287
10.5	Symbolic Logic	289
10.6	Scientific Inference	293
10.7	Notes and References.	299

CHAPTER 11. MATHEMATICAL WORK

11.1	The Starting Point for Mathematical Deduction	303
11.2	Figures and Notation.	304
11.3	Existence Theorems	306
11.4	Generality versus Specialization.	307
11.5	Symmetry	308
11.6	Checking Mathematical Work	312
11.7	Approximations	313
11.8	Formal Systems	315
11.9	Some General Methods of Proof	317
11.10	Dimensions	317
11.11	Dimensional Analysis.	322
11.12	Use of Dimensionless Variables	328
11.13	Notes and References.	330

CHAPTER 12. NUMERICAL COMPUTATIONS

12.1	General Considerations	332
12.2	Mental Arithmetic	333
12.3	The Slide Rule	335
12.4	Nomographs, or Alignment Charts	336
12.5	Logarithms and Other Tables	339
12.6	Keyboard Calculating Machines	340
12.7	Punched-card Computers	342
12.8	Checking Numerical Work	343
12.9	Analog Computers	344
12.10	Digital Computers	345
12.11	Interpolation	346
12.12	Differentiation and Integration	348
12.13	Numerical Solution of Equations	350
12.14	Notes and References.	351

CHAPTER 13. REPORTING THE RESULTS OF RESEARCH

13.1	Types of Reports	354
13.2	Organization of Reports and Papers	356
13.3	The Title and Abstract	358
13.4	The Text	359
13.5	Acknowledgments.	363
13.6	Notes and References:	363
CONCLUSION		365
INDEX		367
