

# BIOLOGICAL PSYCHOLOGY

***An Introduction to Behavioral,  
Cognitive, and Clinical Neuroscience***

SECOND EDITION

MARK R. ROSENZWEIG

ARNOLD L. LEIMAN

S. MARC BREEDLOVE

*University of California, Berkeley*

SINAUER ASSOCIATES, Inc. • Publishers  
Sunderland, Massachusetts

# Contents

## CHAPTER 1 *Biological Psychology: Scope and Outlook* 1

*What Is Biological Psychology?* 2

*Five Viewpoints Explore the Biology of Behavior* 5

*Three Approaches Relate Brain and Behavior* 7

*Neural Plasticity: Behavior Can Change the Brain* 8

*Biological Psychologists Use Several Levels of Analysis* 9

*A Preview of the Book: Major Areas of Current Research* 11

*Neuroscience Contributes to Our Understanding of Psychiatric Disorders* 15

*Laboratory and Clinical Approaches Complement Each Other* 16

*The History of Research on the Brain and Behavior Begins in Antiquity* 17

Recommended Reading 22

**BOX 1.1** WE ARE ALL ALIKE AND WE ARE ALL DIFFERENT 4

**BOX 1.2** IS BIGGER BETTER? THE CASE OF THE BRAIN AND INTELLIGENCE 20

## PART 1

### *Biological Foundations of Behavior* 23

#### CHAPTER 2 *Functional Neuroanatomy: The Nervous System and Behavior* 25

*On a Small Scale, the Nervous System Is Composed of Cells* 26

*On a Large Scale, the Nervous System Consists of Central and Peripheral Divisions* 35

*Brain Structures Can Be Described on the Basis of Function* 45

*The Brain Is Well Protected and Has an Abundant Blood Supply* 49

*Newer Imaging Techniques Allow Us to Look into the Living Human Brain* 51

Summary 54

Recommended Reading 54

**BOX 2.1** NEUROANATOMICAL METHODS PROVIDE WAYS TO SEE SMALL THINGS IN THE BRAIN 30

**BOX 2.2** THREE CUSTOMARY ORIENTATIONS FOR VIEWING THE BRAIN AND BODY 36

**BOX 2.3** ISOLATING SPECIFIC BRAIN ACTIVITY 53

#### CHAPTER 3 *Neurophysiology: Conduction, Transmission, and Integration of Neural Signals* 55

*Electrical Signals Are the Vocabulary of the Nervous System* 56

*The Sequence of Transmission Processes at Chemical Synapses* 68

*Neurons and Synapses Combine to Make Circuits* 75

*Gross Electrical Activity of the Human Brain* 76

Summary 79

Recommended Reading 80

**BOX 3.1** ELECTRICAL SYNAPSES WORK WITH NO TIME DELAY 66

**BOX 3.2** NERVE CELLS VARY IN THEIR SIGNALING 73

**BOX 3.3** SEIZURE DISORDERS 78.

## CHAPTER 4 *Psychopharmacology: Neurotransmitters, Drugs, and Behavior* 81

- The Search for Chemical Transmitters* 82
- Neurotransmitter Systems Form a Complex Array in the Brain* 83
- Research on Drugs Ranges from Molecular Processes to Effects on Behavior* 87
- Drugs Affect Each Stage of Neural Conduction and Synaptic Transmission* 89
- Drugs That Affect the Brain Can Be Divided into Functional Classes* 91
- Drug Abuse Is Pervasive* 98
- Summary 104
- Recommended Reading 104

**BOX 4.1** PATHWAYS FOR NEUROTRANSMITTER SYNTHESIS 84

**BOX 4.2** A STAR AMONG RECEPTOR MOLECULES 87

**BOX 4.3** THE TERMINOLOGY OF SUBSTANCE-RELATED DISORDERS 100

## CHAPTER 5 *Hormones and Behavior* 105

- Hormones Act in a Great Variety of Ways throughout the Body* 106
- Hormones Act on a Wide Variety of Cellular Mechanisms* 112
- Each Endocrine Gland Secretes Specific Hormones* 117
- Hormones Affect Behavior in Many Different Ways* 128
- Hormonal and Neural Systems Interact to Produce Integrated Responses* 130
- Summary 131
- Recommended Reading 132

**BOX 5.1** TECHNIQUES OF MODERN BEHAVIORAL ENDOCRINOLOGY 115

**BOX 5.2** STRESS AND GROWTH: PSYCHOSOCIAL DWARFISM 123

# PART 2

## *Evolution and Development of the Nervous System* 133

### CHAPTER 6 *Evolution of Brain and Behavior* 135

- Why Should We Study Other Species?* 136
- How Closely Related Are Two Species?* 136
- Comparative Methods Help Us Study the Biological Mechanisms of Behavior* 140
- Nervous Systems Differ Widely in Structure* 143
- The Evolution of Vertebrate Brains Can Be Related to Changes in Behavior* 148
- Summary 156
- Recommended Reading 156

**BOX 6.1** DIFFERENCES IN BRAIN MAPS MATCH DIFFERENCES IN LIFESTYLES 142

**BOX 6.2** WHY SHOULD WE STUDY PARTICULAR SPECIES? 143

### CHAPTER 7 *Life-Span Development of the Brain and Behavior* 157

- Growth and Development of the Brain Are Orderly Processes* 158

- Development of the Nervous System Can Be Divided into Six Distinct Stages* 160
- Glial Cells Are Produced throughout Life* 171
- Growth and Development of the Brain Reflect the Interaction of Intrinsic and Extrinsic Factors* 172
- Experience Is an Important Influence on Brain Development* 175
- Maldevelopment of the Human Brain Impairs Behavior* 180
- The Brain Continues to Change As We Grow Older* 182
- Two Timescales Are Needed to Describe Brain Development* 184
- Summary 185
- Recommended Reading 185

**BOX 7.1** DEGENERATION AND REGENERATION OF NERVOUS TISSUE 165

**BOX 7.2** THE FROG RETINOTECTAL SYSTEM DEMONSTRATES INTRINSIC AND EXTRINSIC FACTORS IN NEURAL DEVELOPMENT 172

**BOX 7.3** TRANSGENIC AND KNOCKOUT MICE 177

# PART 3

## Perception and Action 187

### CHAPTER 8 General Principles of Sensory Processing, Touch, and Pain 189

#### SENSORY PROCESSING

All Sensory Systems Follow the Same Basic Plan 190

Different Species Detect Different Aspects of the World with Similar Sensory Systems 192

Sensory Information Processing Is Selective and Analytical 194

#### TOUCH AND PAIN

Touch Includes a Variety of Sensations 202

Pain Is an Unpleasant but Adaptive Experience 209

Summary 216

Recommended Reading 217

### CHAPTER 9 Hearing, Vestibular Perception, Taste, and Smell 219

#### HEARING

Each Part of the Ear Performs a Specific Function in Hearing 221

Auditory System Pathways Run from the Brain Stem to the Cortex 227

Two Main Theories Describe How We Discriminate Pitch 229

One Ear Can Localize Sounds, but Two Ears Can Do It Better 230

The Auditory Cortex Performs Complex Tasks in the Perception of Sound 231

Deafness Is a Major Disorder of the Nervous System 234

#### VESTIBULAR PERCEPTION

The Receptor Mechanisms for the Vestibular System Are in the Inner Ear 236

Evolution Has Shaped the Auditory and Vestibular End Organs 237

Nerve Fibers from the Vestibular Portion of the Vestibulocochlear Nerve Synapse in the Brain Stem 237

Some Forms of Vestibular Excitation Produce Motion Sickness 238

#### THE CHEMICAL SENSES: TASTE AND SMELL

Chemicals in Tastants Elicit Taste Sensations 238

Chemicals in the Air Elicit Odor Sensations 241

Summary 246

Recommended Reading 247

**BOX 9.1** THE BASICS OF SOUND 220

**BOX 9.2** WHY DO SNAKES HAVE FORKED TONGUES? 245

### Chapter 10 Vision: From Eye to Brain 249

Vision Provides Information about the Form, Color, Location, and Movement of Objects 250

The Eye Is Both an Optical Device and a Neural Organ 253

Neural Signals Travel from the Retina to Several Brain Regions 262

Neurons at Different Levels of the Visual System Have Very Different Receptive Fields 265

Area V1 Is Organized in Columns 273

Color Vision Depends on Special Channels from the Retinal Cones through Cortical Area V4 275

Perception of Visual Motion Is Analyzed by a Special System That Includes Cortical Area V5 279

Are the Many Cortical Visual Areas Organized into Two Major Systems? 280

Genetic and Environmental Factors Interact to Determine Some Aspects of Visual Development 281

Visual Neuroscience Can Be Applied to Alleviate Some Visual Deficiencies 282

Summary 283

Recommended Reading 284

**BOX 10.1** THE BASICS OF LIGHT 254

**BOX 10.2** EYES WITH LENSES HAVE EVOLVED IN SEVERAL PHYLA 262

## Chapter 11 *Movements and Actions* 285

- The Behavioral View* 286
- The Control Systems View* 287
- The Neurobiological View* 290
- Movements Are Controlled at Several Nervous System Levels* 298

*Disorders of Muscle, Spinal Cord, or Brain Can Disrupt Movement* 306

- Summary 313
- Recommended Reading 314

**BOX 11.1** MOVEMENTS AND ACTS ARE SHAPED AND MODIFIED BY LEARNING 289

**BOX 11.2** SOMETIMES I CAN MOVE, SOMETIMES I CAN'T 308

**BOX 11.3** THE FROZEN ADDICTS 310

# PART 4

## The Regulation of Behavior 315

### Chapter 12 *Sex: Evolutionary, Hormonal, and Neural Bases* 317

#### SEXUAL BEHAVIOR

*Reproductive Behavior Can Be Divided into Four Stages* 318

*Neural Circuitry of the Brain Regulates Reproductive Behavior* 321

*Human Reproduction Brings Gametes Together* 323

*Pheromones Both Prime and Activate Reproductive Behaviors* 326

#### WHY ARE THERE TWO SEXES?

*Sexual Reproduction Helps Combine Beneficial Mutations* 327

*Males and Females Often Adopt Different Reproductive Strategies* 328

*Mating Systems Can Be Classified into Four Basic Types* 330

*Sexual Selection Accentuates Differences between the Sexes* 331

#### SEXUAL DIFFERENTIATION

*The Sex of an Individual Is Determined Early in Life* 333

*How Should We Define Gender—by Genes, Gonads, Genitals, or the Brain?* 337

*Gonadal Hormones Direct Sexual Differentiation of the Brain and Behavior* 338

*Social Influences Affect Sexual Differentiation of the Nervous System* 344

*Do Early Gonadal Hormones Masculinize Human Behaviors in Adulthood?* 344

Summary 347

Recommended Reading 347

**BOX 12.1** EVOLUTIONARY PSYCHOLOGY 333

**BOX 12.2** THE PARADOXICAL SEXUAL DIFFERENTIATION OF THE SPOTTED HYENA 341

**BOX 12.3** WHAT DETERMINES A PERSON'S SEXUAL ORIENTATION? 345

### Chapter 13 *Homeostasis: Active Regulation of Internal States* 349

*Homeostasis Maintains Internal States within a Critical Range* 350

#### TEMPERATURE REGULATION

*Body Temperature Is a Critical Condition for All Biological Processes* 351

*Some Animals Generate Heat, Others Must Obtain Heat from the Environment* 352

*Which Behaviors Can Adjust Body Temperature?* 356

*The Brain Monitors and Regulates Body Temperature* 358

#### FLUID REGULATION

*Our Cells Evolved to Function in Seawater* 360

*Two Internal Cues Trigger Thirst* 362

*Homeostatic Regulation of Salt Is Required for Effective Regulation of Water* 365

#### FOOD AND ENERGY REGULATION

*Nutrient Regulation Requires the Anticipation of Future Needs* 366

*Insulin Is Crucial for the Regulation of Body Metabolism* 369

*Experience Protects Us from Toxins in Food* 371

*There Is Apparently No Single Satiety Center or Single Hunger Center in the Brain* 372

*Anorexia Nervosa and Bulimia Are Life-Threatening Eating Disorders* 377

Summary 378

Recommended Reading 378

**BOX 13.1** BODY FAT STORES ARE TIGHTLY REGULATED, EVEN AFTER SURGICAL REMOVAL OF FAT 375

## **Chapter 14 Biological Rhythms, Sleep, and Dreaming** 379

### **BIOLOGICAL RHYTHMS**

*Many Animals Show Daily Rhythms in Activity and Physiological Measures* 380

*An Endogenous Circadian Clock Is Located in the Hypothalamus* 381

*Many Biological Events Display Rhythms Shorter Than a Day* 385

*Animals Use Circannual Rhythms to Anticipate Seasonal Changes* 385

### **SLEEPING AND WAKING**

*Human Sleep Exhibits Different Stages* 386

*The Sleep of Different Species Provides Clues about the Evolution of Sleep* 390

*Our Sleep Patterns Change across the Life Span* 392

*Manipulating Sleep Reveals an Underlying Structure* 394

*What Are the Biological Functions of Sleep?* 399

*Sleep Disorders Can Be Serious, Even Life-Threatening* 402

Summary 405

Recommended Reading 406

**BOX 14.1** SLEEP DEPRIVATION CAN BE FATAL 401

## **PART 5**

### **Emotions and Mental Disorders** 407

#### **Chapter 15 Emotions, Aggression, and Stress** 409

*What Are Emotions?* 410

*Broad Theories of Emotion Emphasize Bodily Responses* 410

*Facial Expressions Reveal Emotional States* 412

*Autonomic Responses Are Elicited by Emotion-Provoking Stimuli* 415

*Distinct Brain Circuits Mediate or Control Emotions* 416

*Neural Circuitry, Hormones, and Synaptic Transmitters Mediate Violence and Aggression* 422

*Stress Activates Many Bodily Responses* 425

*Stress and Emotions Are Related to Some Human Diseases* 428

*So What Purpose Do Emotions Serve?* 434

Summary 434

Recommended Reading 434

#### **Chapter 16 Psychopathology: Biological Bases of Behavior Disorders** 435

*The Toll of Psychiatric Disorders Is Huge* 436

*Schizophrenia Is the Major Neurobiological Challenge in Psychiatry* 436

*Depression Is a Major Psychiatric Disorder* 448

*There Are Several Types of Anxiety Disorders* 456

*Neurosurgery Has Been Used to Treat Psychiatric Disorders* 459

*There Are Many Different Hypotheses on the Causes of Mental Disorders* 461

Summary 462

Recommended Reading 463

**BOX 16.1** LONG-TERM EFFECTS OF ANTIPSYCHOTIC DRUGS 446

**BOX 16.2** THE SEASON TO BE DEPRESSED 455

**BOX 16.3** TICS, TWITCHES, AND SNORTS: THE UNUSUAL CHARACTER OF TOURETTE'S SYNDROME 460

# PART 6

## Cognitive Neuroscience 465

### Chapter 17 Learning and Memory: Biological Perspectives 467

*Many Kinds of Brain Damage Can Impair Memory* 468

*There Are Several Kinds of Memory and Learning* 472

*Even "Simple" Learning May Be Complex* 472

*Memory Has Temporal Stages: Short, Intermediate, and Long* 473

*Different Regions of the Brain Process Different Aspects of Memory* 478

*Brain Imaging Provides New Insights about Regions Involved in Different Kinds of Memories* 483

*Comparative Approaches Yield Insights about the Evolution of Learning and Memory* 488

*Learning and Memory Change throughout Life* 491

Summary 493

Recommended Reading 494

**BOX 17.1** LEARNING AND MEMORY: SOME BASIC CONCEPTS AND DEFINITIONS 474

### Chapter 18 Learning and Memory: Neural Mechanisms 495

*New Experimental Techniques Are Enabling Rapid Progress in Research on Mechanisms of Memory* 496

*The Nervous System May Form and Store Memories in Various Ways* 497

*Cerebral Changes Result from Training* 500

*Invertebrate Nervous Systems Show Plasticity* 503

*Could Long-Term Potentiation Be a Model for Studying Mechanisms of Learning and Memory?* 504

*The Mammalian Cerebellum Houses the Brain Circuit for a Simple Conditioned Reflex* 510

*Training Changes Receptive Fields* 512

*Memories of Different Durations Form by Different Neurochemical Mechanisms* 513

*The Basic Neurochemical Cascade Extends from Stimulus to LTM* 516

*Memory Formation Can Be Modulated* 517

*Some Brain Measures Correlate with Age-Related Impairments of Memory* 519

Summary 522

Recommended Reading 522

### Chapter 19 Language and Cognition 523

*Speech and Language May Have Evolved from Gestures* 524

*Language Disorders Result from Region-Specific Brain Injuries* 528

*Electrical Stimulation of the Brain Provides Information about Brain Organization of Language* 537

*Functional Neuroimaging Portrays Brain Organization for Speech and Language* 538

*The Left Brain Is Different from the Right Brain* 539

*The Frontal Lobes of Humans Are Related to Higher-Order Aspects of Cognitive and Emotional Functions* 545

*Deficits in Spatial Perception Follow Some Types of Brain Injury* 548

*Some Functions Show Recovery Following Brain Injury* 550

Summary 553

Recommended Reading 554

**BOX 19.1** THE WADA TEST 529

**BOX 19.2** CHILDHOOD LOSS OF ONE HEMISPHERE 537

**BOX 19.3** STRUCTURAL ASYMMETRY IN THE VERTEBRATE NERVOUS SYSTEM 544

**BOX 19.4** A SPORT THAT DESTROYS THE MIND 551

### Afterword The Ever-Changing Brain 555
