Contents

Preface	xv
Acknowledgments	xix
Author	xxi
1 Introduction to Mathematical Morphology	1
1.1 Basic Concept in Digital Image Processing	2
1.2 Brief History of Mathematical Morphology	5
1.3 Essential Morphological Approach to Image Analysis	5
1.4 Scope of This Book	7
References	7
Appendix: Selected List of Books on Image Processing and Mathematical Morphology	9
2 Binary Morphology	11
2.1 Set Operations on Binary Images	11
2.2 Logical Operations on Binary Images	13
2.3 Binary Dilation	15
2.3.1 Properties of Dilation	17
2.4 Binary Erosion	17
2.4.1 Properties of Erosion	18
2.5 Opening and Closing	20
2.5.1 Properties of Opening and Closing	21
2.6 Hit-or-Miss Transformation	22
References	24
3 Grayscale Morphology	25
3.1 Grayscale Dilation and Erosion	26
3.2 Grayscale Dilation Erosion Duality Theorem	32

3.3	Grayscale Opening and Closing	33
	References	35
4	Basic Morphological Algorithms	37
4.1	Boundary Extraction	37
4.2	Region Filling	39
4.3	Extraction of Connected Components	39
4.4	Convex Hull	41
4.5	Thinning	43
4.6	Thickening	45
4.7	Skeletonization	45
4.8	Pruning	47
4.9	Morphological Edge Operator	48
4.9.1	Simple Morphological Edge Operators	48
4.9.2	Blur-Minimum Morphological Edge Operators	51
	References	52
5	Basic Morphological Filters	55
5.1	Alternating Sequential Filters	56
5.1.1	Morphological Adjunction	57
5.1.2	Redundancy Removal in ASFs	58
5.1.3	Definitions of the New Class of ASFs	59
5.1.4	Properties of the New Class of ASFs	61
5.2	Recursive Morphological Filters	67
5.3	Soft Morphological Filters	72
5.3.1	Properties of Soft Morphological Operations	77
5.3.2	Idempotent Soft Morphological Filters	78
5.4	OSSM Filters	82
5.4.1	One-Dimensional Filtering Analysis	84
5.4.2	Two-Dimensional Filtering Analysis	85
5.4.3	Relationship between the OSSM Dilation and Erosion	86
5.4.4	Properties of OSSM Filters and Relationship to Other Nonlinear Filters	86
5.4.5	Experimental Results	90
5.4.6	Extensive Applications	92
5.5	RSM Filters (RSMFs)	97
5.5.1	Properties of RSMFs	103
5.5.2	Idempotent RSMFs	105
5.5.3	Cascaded RSMFs	106
5.6	ROSSM Filters	107
5.7	Regulated Morphological Filters	111
5.8	Fuzzy Morphological Filters	116
	References	123

6 Distance Transformation	127
6.1 DT by Iterative Operations	128
6.2 DT by Mathematical Morphology	133
6.3 Approximation of Euclidean Distances	136
6.4 Decomposition of Distance SEs	139
6.4.1 Decomposition of City-Block and Chessboard Distance SEs	139
6.4.2 Decomposition of the Euclidean Distance Structuring Element	141
6.4.2.1 Construction Procedure	141
6.4.2.2 Computational Complexity	143
6.5 Iterative Erosion Algorithm	144
6.5.1 Redundant Calculations in the IEA	147
6.5.2 An Improved Iterative Erosion Algorithm	147
6.5.3 An Example of Improved Iterative Erosion Algorithm	150
6.6 Two Scan-Based Algorithm	152
6.6.1 Double Two-Scan Algorithm	152
6.6.2 Basic Ideas of Two-Scan Algorithms	157
6.6.3 Fundamental Lemmas	158
6.6.4 TS_1 —A Two Scan-Based EDT Algorithm for General Images	161
6.6.5 TS_∞ —A Two Scan-Based EDT Algorithm for Images with Obstacles	164
6.6.6 Computational Complexity	165
6.7 Three-Dimensional Euclidean Distance	168
6.7.1 Three-Dimensional Image Representation	168
6.7.2 Distance Definition Functions in the Three-Dimensional Domain	168
6.7.3 A Three-Dimensional Neighborhood in the EDT	169
6.8 Acquiring Approaches	170
6.8.1 Acquiring Approaches for City-Block and Chessboard DT	170
6.8.2 Acquiring Approaches for EDT	171
6.9 Deriving Approaches	173
6.9.1 Fundamental Lemmas	174
6.9.2 Two Scan-Based Algorithm for Three-Dimensional EDT	176
6.9.3 Complexity of the Two-Scan-Based Algorithm	179
References	179
7 Feature Extraction	183
7.1 Edge Linking by MM	183
7.1.1 Adaptive MM	184
7.1.2 Adaptive Morphological Edge-Linking Algorithm	185
7.1.3 Experimental Results	187

7.2	Corner Detection by Regulated Morphology.....	192
7.2.1	A Modified Laganieri's Operator.....	194
7.2.2	Modified Regulated Morphology for Corner Detection.....	195
7.2.3	Experimental Results.....	197
7.3	Shape Database with Hierarchical Features.....	199
7.3.1	Shape Number from DT.....	200
7.3.2	Significant Points Radius and Coordinates.....	202
7.3.3	Recognition by Matching Database.....	202
7.3.4	Localization by Hierarchical Morphological Band-Pass Filter.....	203
7.4	Corner and Circle Detection.....	204
7.5	Size Histogram.....	206
	References.....	211
8	Object Representation.....	213
8.1	Object Representation and Tolerances.....	213
8.1.1	Representation Framework: Formal Languages and MM.....	214
8.1.2	Dimensional Attributes.....	215
8.1.2.1	The Two-Dimensional Attributes.....	215
8.1.2.2	The Three-Dimensional Attributes.....	216
8.1.2.3	Tolerancing Expression.....	218
8.2	Skeletonization or MA Transformation.....	219
8.2.1	Medial Axis Transformation by Morphological Dilations.....	221
8.2.2	Thick Skeleton Generation.....	222
8.2.2.1	The Skeleton from Distance Function.....	222
8.2.2.2	Detection of Ridge Points.....	223
8.2.2.3	Trivial Uphill Generation.....	223
8.2.3	Basic Definitions.....	224
8.2.3.1	Base Point.....	224
8.2.3.2	Apex Point.....	225
8.2.3.3	Directional-Uphill Generation.....	225
8.2.3.4	Directional-Downhill Generation.....	226
8.2.4	The Skeletonization Algorithm and Connectivity Properties.....	227
8.2.5	A Modified Algorithm.....	230
8.3	Morphological Shape Description.....	231
8.3.1	Introduction.....	231
8.3.2	G-Spectrum.....	233
8.3.3	The Properties of G-Spectrum.....	234
	References.....	242

9	Decomposition of Morphological Structuring Elements	245
9.1	Decomposition of Geometric-Shaped SEs	245
9.1.1	Definitions of Types of SEs	246
9.1.2	Decomposition Properties	249
9.1.3	One-Dimensional Geometric-Shaped SEs	252
9.1.3.1	Semicircle, Semiellipse, Gaussian, Parabola, Semihyperbola, Cosine, and Sine	252
9.1.3.2	Decomposition Strategy	252
9.1.4	Two-Dimensional Geometric-Shaped SEs	257
9.1.4.1	Hemisphere, Hemiellipsoid, Gaussian, Elliptic Paraboloid, and Hemihyperboloid	257
9.1.4.2	Decomposition Strategy	258
9.1.5	Decomposition of a Large Transformed Cyclic Cosine Structuring Element	260
9.1.6	Decomposition of Two-Dimensional SEs into One-Dimensional Elements	263
9.2	Decomposition of Binary SEs	263
9.2.1	Overview of Decomposition Using GAs	264
9.2.2	Advantages of Structuring Element Decomposition	265
9.2.3	The Decomposition Technique Using GAs	266
9.2.4	Experimental Results	270
9.3	Decomposition of Grayscale SEs	272
9.3.1	General Properties of Structuring Element Decomposition	275
9.3.2	The One-Dimensional Arbitrary Grayscale Structuring Element Decomposition	275
9.3.3	The Two-Dimensional Arbitrary Grayscale Structuring Element Decomposition	280
9.3.4	Complexity Analysis	283
	References	286
10	Architectures for Mathematical Morphology	289
10.1	Threshold Decomposition of Grayscale Morphology into Binary Morphology	290
10.1.1	Threshold Decomposition Algorithm for Grayscale Dilation	290
10.1.1.1	Notations and Definitions	291
10.1.1.2	Formulas' Derivation	293
10.1.1.3	Algorithm Description	295
10.1.1.4	Computational Complexity	298
10.1.2	A Simple Logic Implementation of Grayscale Morphological Operations	300
10.1.2.1	Binary Morphological Operations	300
10.1.2.2	Grayscale Morphological Operations	301

10.1.2.3	Additional Simplification	304
10.1.2.4	Implementation Complexity	304
10.2	Implementing Morphological Operations Using Programmable Neural Networks	306
10.2.1	Programmable Logic Neural Networks	308
10.2.2	Pyramid Neural Network Structure	311
10.2.3	Binary Morphological Operations by Logic Modules	312
10.2.4	Grayscale Morphological Operations by Tree Models	314
10.2.5	Improvement by Tri-Comparators	316
10.2.6	Another Improvement	317
10.2.7	Application of Morphological Operations on Neocognitron	320
10.3	MLP as Processing Modules	321
10.4	A Systolic Array Architecture	329
10.4.1	Basic Array Design	329
10.4.2	A Systolic Array for Processing One Scan of the Whole Image	332
10.4.3	The Complete Systolic Array for Processing Two Scans of the Whole Image	333
10.5	Implementation on Multicomputers	333
10.5.1	Characteristics of Multicomputers	334
10.5.2	Implementation of the Two-Scan Algorithm	335
10.5.3	Implementation of the Blocked Two-Scan Algorithm	336
10.5.4	Performance of Two-Scan Algorithms	337
	References	338
