

Biological Wastewater Treatment Series

VOLUME ONE

Wastewater Characteristics, Treatment and Disposal

Marcos von Sperling

*Department of Sanitary and Environmental Engineering
Federal University of Minas Gerais, Brazil*

Publishing
LONDON • NEW YORK

DESA
UFMG

Contents

<i>Preface</i>	vii
<i>The author</i>	xi
1 Introduction to water quality and water pollution	1
1.1 Introduction	1
1.2 Uses of water	3
1.3 Water quality requirements	3
1.4 Water pollution	6
2 Wastewater characteristics	9
2.1 Wastewater flowrates	9
2.2 Wastewater composition	28
3 Impact of wastewater discharges to water bodies	77
3.1 Introduction	77
3.2 Pollution by organic matter and stream self purification	77
3.3 Contamination by pathogenic microorganisms	123
3.4 Eutrophication of lakes and reservoirs	131
3.5 Quality standards for wastewater discharges and waterbodies	150
4 Overview of wastewater treatment systems	163
4.1 Wastewater treatment levels	163
4.2 Wastewater treatment operations, processes and systems	165
4.3 Preliminary treatment	178
4.4 Primary treatment	179
4.5 Secondary treatment	180
4.6 Removal of pathogenic organisms	215
4.7 Analysis and selection of the wastewater treatment process	215

5	Overview of sludge treatment and disposal	242
5.1	Introduction	242
5.2	Relationships in sludge: solids levels, concentration and flow	246
5.3	Quantity of sludge generated in the wastewater treatment processes	249
5.4	Sludge treatment stages	252
5.5	Sludge thickening	255
5.6	Sludge stabilisation	256
5.7	Sludge dewatering	258
5.8	Sludge disinfection	268
5.9	Final disposal of the sludge	272
6	Complementary items in planning studies	277
6.1	Preliminary studies	277
6.2	Design horizon and staging periods	279
6.3	Preliminary design of the alternatives	281
6.4	Economical study of alternatives	282
	References	287
