<i>Chapter 1. The basic principles of the electron microscope</i>	<i>1</i>
---	----------

1.1 The use of electrons for microscopy	2
1.2 Electron lenses	4
1.3 Defects of electron lenses	9
1.3.1 Spherical aberration	9
1.3.2 Chromatic aberration	10
1.3.3 Astigmatism	11
1.3.4 Chromatic change of magnification	12
1.4 Depth of field	13
1.5 General features of electron microscope design	14
1.6 The electron gun	15
1.7 The condenser system	21
1.7.1 Condenser apertures	22
1.8 Beam alignment system	25
1.9 The objective lens	26
1.10 The projector system	28
1.10.1 Magnification range	28
1.10.2 High magnification operation	29
1.10.3 Image distortion	30
1.10.4 Low magnification	33
1.10.5 Scan magnification	34
1.11 The complete optical system	36

<i>Chapter 2. The design of the electron microscope</i>	<i>38</i>
---	-----------

2.1 General construction of the column	38
2.2 The electron gun	42
2.2.1 The electron emitter	44

2.3	The condenser lenses	46
2.3.1	Condenser astigmatism corrector	47
2.4	Illumination alignment coils	49
2.5	The objective lens	50
2.6	The specimen stage	51
2.6.1	Tilt stages	55
2.6.2	Multiple specimen stages	58
2.6.3	High contrast specimen holder	60
2.7	Special stages for specimen treatment	60
2.7.1	Furnace heating stages	60
2.7.2	Grid heater stage	62
2.7.3	Cold stages	62
2.7.4	Combined heating, cooling and tilting stage	64
2.7.5	Straining stages	64
2.7.6	Gas reaction stages	65
2.7.7	Stages for magnetic studies	65
2.8	Objective apertures	66
2.9	Objective astigmatism corrector	68
2.10	The projector system	69
2.11	Viewing system	69
2.12	The camera	70
2.13	The vacuum system	73
2.13.1	General function of vacuum systems	73
2.13.2	A vacuum system for an electron microscope	74
2.14	Electrical supplies	78
2.14.1	High voltage supply	78
2.14.2	Filament and bias supply	78
2.14.3	Current supplies to the electron lenses	79
2.14.4	Other control circuitry	81

Chapter 3. Image formation in the electron microscope 83

3.1	Elastic scattering	83
3.2	Inelastic scattering	84
3.3	Contrast	87
3.4	Diffraction contrast	91
3.5	Other methods of contrast improvement	96
3.6	The formation of a Fresnel fringe	96
3.7	Coherence	98
3.8	The imaging of fine structure – optical transfer theory	99
3.8.1	Stability of supplies	103
3.8.2	Non-axial illumination	105
3.8.3	The turning points	105
3.8.4	Operating conditions	106
3.9	Focusing	109
3.10	Modes of operation of the electron microscope	110
3.10.1	Electron diffraction	110
3.10.2	High dispersion electron diffraction	112
3.10.3	Dark field microscopy	114
3.10.4	Strioscopy	117

Chapter 4. Alignment and adjustment of the electron microscope . . . 123

4.1	The electron gun	124
4.2	The condenser system	126
4.3	Centring the condenser aperture	127
4.4	First condenser lens alignment	128
4.5	Correction of beam astigmatism	129
4.6	Imaging system alignment	130
4.7	Illumination tilt alignment	132
4.8	Centring the objective aperture	135
4.9	Correction of objective lens astigmatism	135
4.10	Routine re-checks of alignment during operation	141

Chapter 5. Checking the performance of the electron microscope . . . 142

5.1	The resolving power of an electron microscope	142
5.1.1	The point separation test	143
5.1.2	The lattice resolution test	145
5.1.3	The Fresnel fringe test	148
5.2	Illumination tilt alignment	150
5.3	Stability of the supplies	151
5.4	Specimen drift	153
5.5	Contamination of the specimen	155
5.6	Focusing of the objective lens	156
5.7	Cleanliness of the column	156
5.7.1	The illumination system	156
5.7.2	The specimen holder	157
5.7.3	The objective apertures and carrier	157
5.7.4	The projector lens	158
5.8	Site conditions	158
5.8.1	Small amplitude mechanical vibrations	158
5.8.2	Low level ambient magnetic fields	159
5.9	Magnification	159
5.9.1	Magnification calibration	160
5.9.2	Geometrical distortion	164

Chapter 6. Operation of the electron microscope 166

6.1	Choice of accelerating voltage	166
6.2	Choice of condenser aperture	167
6.3	Choice of objective aperture	168
6.4	Mounting the specimen	169
6.5	Inserting a specimen and switching on the microscope beam	170
6.6	Finding the beam	171
6.7	Preliminary examination of the specimen	172
6.8	Choice of magnification	173
6.9	Focusing	173

6.10	Taking the photograph	177
6.11	Tilting the specimen	177
6.11.1	Tilting for stereoscopy	177
6.11.2	Tilting for crystallography	179
6.11.3	Tilting for interpretation	180
6.12	Photographing a diffraction pattern	180
6.13	Radiation damage and ways to minimise it	181
6.13.1	Minimal exposure operation	182
6.13.2	Magnitude of radiation effects	183
6.13.3	Use of an image intensifier	183
6.13.4	Low temperature operation	186
6.13.5	Ultra high vacuum	186
6.13.6	Very high voltage operation	186
6.14	Reduction of contamination	187
6.15	Switching off the instrument	188

Chapter 7. Image recording and display 191

7.1	Introduction	191
7.2	Basic aspects of photographic recording	193
7.2.1	Principles of photographic recording	193
7.2.2	Density and exposure	194
7.2.3	Speed and granularity	197
7.2.4	Spectral response	204
7.2.5	Resolution	208
7.2.6	Contrast and tonal range	213
7.3	Photographic materials	217
7.3.1	Emulsions for electron image recording	217
7.3.2	Plates and films	221
7.3.3	Plate and film dimensions	222
7.3.4	Defects of plates and films	223
7.3.5	Desiccation of plates and films	224
7.3.6	Dimensional stability and distortion of plates and films	226
7.3.7	Printing papers	226
7.3.8	Dimensional stability of prints	228
7.3.9	Storage of unexposed photographic material	228
7.3.10	Storage of exposed photographic material	229
7.4	Photographic apparatus	231
7.4.1	Negative processing apparatus	231
7.4.2	Print preparation apparatus	234
7.4.3	Rapid print processing apparatus	242
7.4.4	Slide making apparatus	243
7.4.5	Other photographic apparatus	243
7.5	Photographic methods	244
7.5.1	Initial preparations – negative dark room	245
7.5.2	Processing plates – dish (tray) method	246
7.5.3	Processing plates – tank method	247
7.5.4	Processing sheet film – tank method	248
7.5.5	Processing roll-film – roll-film tank method	249
7.5.6	Processing roll-film – open tank method	251

7.5.7	Rapid drying of plates and films	251
7.5.8	Possible difficulties and remedies in negative processing	252
7.5.9	Initial preparations – printing darkroom	253
7.5.10	Processing prints – enlarging	254
7.5.11	Processing prints – contact printing	257
7.5.12	Processing prints – rapid stabilisation processors	257
7.5.13	Special printing techniques	258
7.5.14	Print finishing and presentation	260
7.5.15	Possible difficulties and remedies in print processing	261
7.6	Photographic chemicals	263
7.7	External photography of the electron image	267
7.8	Electronic display and recording systems	268
7.9	Viewing the electron image	270
7.9.1	The binocular viewing telescope	270
7.9.2	The fluorescent screen	271
7.9.3	The ambient lighting	272

Chapter 8. Image interpretation 277

8.1	Introduction	277
8.2	The effect of instrumental settings on interpretation of the image	277
8.2.1	The effect of coherence	277
8.2.2	The effect of focus setting	277
8.2.3	Effects of illumination aperture and supply stability	282
8.2.4	Special effects with crystalline material	284
8.2.5	The effect of astigmatism	287
8.3	Directional structure in the image	289
8.3.1	The effect of specimen drift	289
8.3.2	Effect of mechanical vibration	289
8.3.3	Electrical instabilities beyond design tolerances	290
8.3.4	Ambient field	290
8.3.5	Interpretation of directional structure	290
8.4	The effect of contamination	291
8.5	The effect of etching	291
8.6	The effect of radiation damage	294
8.7	Analysing the source of image defects	294
8.8	General precautions in interpretation of electron micrographs	296

Chapter 9. Future developments of the electron microscope 297

9.1	Simplified electron microscopes	297
9.2	High accelerating voltages	301
9.2.1	Advantages of higher accelerating voltages	301
9.2.2	Operational advantages of high voltages	304
9.2.3	High voltage instruments	305
9.2.4	Special treatment stages	310
9.2.5	Voltages above 1 MV	313
9.3	Analytical facilities for electron microscopes	313

9.3.1	Selected area electron diffraction	313
9.3.2	X-ray micro-analysis	313
9.3.3	Energy analysis	316
9.3.4	Scanning electron diffraction	319
9.4	Scanning transmission electron microscopy	320
9.4.1	The scanning transmission electron microscope (STEM)	322
9.4.2	The STEM instrument	323
9.4.3	Analytical facilities in STEM	325
<i>Appendix. List of suppliers</i>		<i>329</i>
<i>Subject index</i>		<i>338</i>
