
LIQUID-VAPOR PHASE-CHANGE PHENOMENA

**An Introduction to the Thermophysics
of Vaporization and Condensation Processes
in Heat Transfer Equipment**

Van P. Carey

*Mechanical Engineering Department
University of California at Berkeley*

SECOND EDITION

CONTENTS

Preface	xi
Nomenclature	xiii

INTRODUCTORY REMARKS	xix
----------------------	-----

PART 1 THERMODYNAMIC AND MECHANICAL ASPECTS OF INTERFACIAL PHENOMENA AND PHASE TRANSITIONS

1 THE LIQUID-VAPOR INTERFACIAL REGION – A NANOSCALE PERSPECTIVE	3
1.1 A Molecular Perspective on Liquid-Vapor Transitions	3
1.2 The Interfacial Region – Molecular Theories of Capillarity	13
1.3 Nanoscale Features of the Interfacial Region	20
1.4 Molecular Dynamics Simulation Studies of Interfacial Region	
Thermophysics	29
References	34
Problems	36
2 THE LIQUID-VAPOR INTERFACE – A MACROSCOPIC TREATMENT	39
2.1 Thermodynamic Analysis of Interfacial Tension Effects	39
2.2 Determination of Interface Shapes at Equilibrium	46
2.3 Temperature and Surfactant Effects on Interfacial Tension	53
2.4 Surface Tension in Mixtures	56
2.5 Near Critical Point Behavior	58
2.6 Effects of Interfacial Tension Gradients	60
References	68
Problems	69

3	WETTING PHENOMENA AND CONTACT ANGLES	73
3.1	Equilibrium Contact Angles on Smooth Surfaces	73
3.2	Wettability, Cohesion, and Adhesion	78
3.3	The Effect of Liquid Surface Tension on Contact Angle	83
3.4	Adsorption	86
3.5	Spread Thin Films	87
3.6	Contact Angle Hysteresis	93
3.7	Other Metrics for Wettability	99
3.8	A Nanoscale View of Wettability	102
	References	104
	Problems	105
4	TRANSPORT EFFECTS AND DYNAMIC BEHAVIOR AT INTERFACES	107
4.1	Transport Boundary Conditions	107
4.2	Kelvin-Helmholtz and Rayleigh-Taylor Instabilities	112
4.3	Interface Stability of Liquid Jets	121
4.4	Waves on Liquid Films	128
4.5	Interfacial Resistance in Vaporization and Condensation Processes	134
4.6	Maximum Flux Limitations	143
	References	147
	Problems	148
5	PHASE STABILITY AND HOMOGENEOUS NUCLEATION	151
5.1	Metastable States and Phase Stability	151
5.2	Thermodynamic Aspects of Homogeneous Nucleation in Superheated Liquid	164
5.3	The Kinetic Limit of Superheat	172
5.4	Comparison of Theoretical and Measured Superheat Limits	177
5.5	Thermodynamic Aspects of Homogeneous Nucleation in Supercooled Vapor	182
5.6	The Kinetic Limit of Supersaturation	186
5.7	Wall Interaction Effects on Homogeneous Nucleation	192
	References	196
	Problems	197
PART 2 BOILING AND CONDENSATION NEAR IMMERSED BODIES		
6	HETEROGENEOUS NUCLEATION AND BUBBLE GROWTH IN LIQUIDS	203
6.1	Heterogeneous Nucleation at a Smooth Interface	203
6.2	Nucleation from Entrapped Gas or Vapor in Cavities	210
6.3	Criteria for the Onset of Nucleate Boiling	220
6.4	Bubble Growth in an Extensive Liquid Pool	226

6.5	Bubble Growth Near Heated Surfaces	232
6.6	Bubble Departure Diameter and the Frequency of Bubble Release	242
	References	247
	Problems	250
7	POOL BOILING	253
7.1	Regimes of Pool Boiling	253
7.2	Models of Transport During Nucleate Boiling	259
7.3	Correlation of Nucleate Boiling Heat Transfer Data	275
7.4	The Maximum Heat Flux Conditions	287
7.5	Minimum Heat Flux Conditions	302
7.6	Film Boiling	305
7.7	Transition Boiling	331
	References	337
	Problems	342
8	OTHER ASPECTS OF BOILING AND EVAPORATION IN AN EXTENSIVE AMBIENT	345
8.1	Additional Parametric Effects on Pool Boiling	345
8.2	The Leidenfrost Phenomenon	359
8.3	Fluid-Wall Interactions and Disjoining Pressure Effects	371
8.4	Enhancement of Pool Boiling Heat Transfer	383
8.5	Pool Boiling of Binary Mixtures	387
	References	403
	Problems	409
9	EXTERNAL CONDENSATION	413
9.1	Heterogeneous Nucleation in Vapors	413
9.2	Dropwise Condensation	418
9.3	Film Condensation on a Flat, Vertical Surface	428
9.4	Film Condensation on Cylinders and Axisymmetric Bodies	444
9.5	Effects of Vapor Motion and Interfacial Waves	449
9.6	Condensation in the Presence of a Noncondensable Gas	455
9.7	Enhancement of Condensation Heat Transfer	466
	References	468
	Problems	472
PART 3 INTERNAL FLOW CONVECTIVE BOILING AND CONDENSATION		
10	INTRODUCTION TO TWO-PHASE FLOW	479
10.1	Two-Phase Flow Regimes	479
10.2	Basic Models and Governing Equations for One-Dimensional Two-Phase Flow	491
10.3	Determination of the Two-Phase Multiplier and Void Fraction	499

10.4	Analytical Models of Annular Flow	518
10.5	Effects of Flow Passage Size and Geometry	529
	References	532
	Problems	535
11	INTERNAL CONVECTIVE CONDENSATION	537
11.1	Regimes of Convective Condensation in Conventional (Macro) Tubes	537
11.2	Analytical Modeling of Downflow Internal Convective Condensation	542
11.3	Correlation Methods for Convective Condensation Heat Transfer	550
11.4	Convective Condensation in Microchannels and Channels with Noncircular Cross Sections	562
11.5	Internal Convective Condensation of Binary Mixtures	568
	References	577
	Problems	580
12	CONVECTIVE BOILING IN TUBES AND CHANNELS	583
12.1	Regimes of Convective Boiling in Conventional (Macro) Tubes	583
12.2	Onset of Boiling in Internal Flows	590
12.3	Subcooled Flow Boiling	598
12.4	Saturated Flow Boiling	608
12.5	Critical Heat Flux Conditions for Internal Flow Boiling	625
12.6	Post-CHF Internal Flow Boiling	644
12.7	Internal Flow Boiling in Microchannels and Complex Enhanced Flow Passages	664
12.8	Internal Flow Boiling of Binary Mixtures	676
	References	689
	Problems	700
	Appendix I Basic Elements of the Kinetic Theory of Gases	703
	Appendix II Saturation Properties of Selected Fluids	713
	Appendix III Analysis Details for the Molecular Theory of Capillarity	729
	Index	735
