

Damage Mechanisms and Life Assessment of High-Temperature Components_____

R. Viswanathan

Technical Advisor
Generation and Storage Division
Electric Power Research Institute

ASM INTERNATIONAL®

Metals Park, Ohio 44073

Contents

1	Introduction and Overview	1
	Need for Remaining-Life-Assessment Technology	1
	Fossil Power Plants	2
	Types of Electric Power Plants	2
	Historical Evolution of Fossil Plants	3
	Typical PC Fossil Plant and Component Damage Mechanisms	3
	Reactor Pressure Vessels for Petroleum Refining	7
	Design Life of Components	10
	Definitions of Failure	13
	Appropriateness of Crack Initiation Versus Crack Growth	15
	Implementation of Remaining-Life-Assessment Procedures	17
	Scope and Organization of the Book	18
	References	20
2	Toughness	21
	Ductile-to-Brittle Transition	21
	Definitions of Transition Temperature	21
	Capabilities and Limitations of the Transition-Temperature Approach	23
	Linear-Elastic Fracture Mechanics	25
	Energy-Based Approach	25
	Stress-Intensity Approach	26
	Limitations and Capabilities of the LEFM Approach	28
	Effects of Testing and Material Variables on Fracture Toughness	30
	Charpy Test – K_{Ic} Correlations	31
	Elastic-Plastic Fracture Mechanics (EPFM)	36
	Temper Embrittlement of Steels	43
	Manifestations and Relevance of Temper Embrittlement	43
	Causes of Temper Embrittlement	45

Time-Temperature Relationships for Temper Embrittlement	48
Effect of Composition on Temper Embrittlement	49
Effects of Microstructural Factors	51
Effects of Temper Embrittlement on Other Properties	52
Failure Analysis of Temper-Embrittled Components	53
Control of Temper Embrittlement	53
Nomenclature	53
References	54
3. Creep	59
Creep Curves: Basic Concepts	59
Creep-Curve Shapes	59
Creep-Curve Descriptions	61
Stress and Temperature Dependence	61
Parametric Extrapolation Techniques	64
Larson-Miller Parameter	65
Orr-Sherby-Dorn Parameter	67
Manson-Haferd Parameter	67
Manson-Brown Parameter	68
Minimum-Commitment Method	68
Design Rules	69
Cumulative Damage in Creep	70
Damage Rules	70
Validity of Damage Rules	71
Uniaxial-to-Multiaxial Data Correlation	73
Effective Stress for Creep and Rupture	73
Stresses in Internally Pressurized Components	75
Stress Redistribution in Creep	75
Rupture Ductility	76
Time-Temperature Dependence	77
Estimation of Long-Term Ductility	78
Effects of Impurities	79
Stress-Relief Cracking	80
Monkman-Grant Correlation	82
Creep Fracture	82
Creep-Fracture Maps	83
Cavity Nucleation	83
Cavity Growth	84
Failure Prediction Using the Constrained-Growth Model	85
Environmental Effects	86
Creep-Crack Growth	87
Crack-Tip Parameters	87
Experimental Results	92
Remaining-Life-Assessment Methodology	98
Assessment of Bulk Creep Damage	99
Localized Damage by Crack Growth	101
Physical Metallurgy of Creep-Resistant Steels	103
Nomenclature	103
References	105

4 Fatigue	111
High-Cycle Fatigue and the S-N Curve	111
Effects of Test Variables	113
Effects of Metallurgical Variables	118
Low-Cycle Fatigue	118
Cyclic Stress-Strain Behavior	119
Coffin-Manson Relationships	121
Creep-Fatigue Interaction	121
Hold-Time Effects in Strain-Controlled Fatigue	122
Effect of Rupture Ductility	129
Effects of Environment	129
Summary of Hold-Time and Frequency Effects	132
Damage Rules and Life Prediction	132
Design Rules for Creep-Fatigue	147
Strain-Concentration Effects	148
Illustration of Linear Damage Summation	150
Failure-Mechanism Maps	152
Thermal Fatigue	152
Thermal-Stress Fatigue	154
Thermomechanical Fatigue	155
TMF Life Prediction	158
Fatigue-Crack Growth	158
LEFM Approach	158
J-Integral Correlations	160
Crack Growth in Fully Plastic Cycling	161
Effects of Test Variables on LEFM Growth	164
Near-Threshold Crack Growth	167
Thermal-Fatigue-Crack Growth	169
Crack Growth in Creep-Fatigue	170
Nomenclature	172
References	174
5 Life Prediction for Boiler Components	183
General Description	183
Materials and Damage Mechanisms	185
Boiler-Tube Failure Mechanisms	185
Header-Damage Mechanisms	197
Damage Mechanisms in Steam Pipes	201
Physical Metallurgy of Boiler Steels	202
Damage and Life Assessment of Boiler Components	205
Unique Problems in Assessment of Welds	206
Calculational Methods	209
Extrapolation of Statistics of Past Failures	213
Dimensional Measurements	214
Metallographic Methods	218
Methods Based on Temperature Estimation	228
Postservice Creep and Rupture Tests	242
Removal of Samples From Components	244

Fracture-Mechanics Approach	246
Integrated Methodology for Life Assessment	249
Example Problem	254
Step 1: Identification of Material Properties	255
Step 2: Expression for Estimating C_t	255
Step 3: Life Estimation	256
