# A First Course in Statistical Programming with R

W. John Braun and Duncan J. Murdoch

**CAMBRIDGE**  
UNIVERSITY PRESS

# Contents

---

<b>Preface</b>	<i>page ix</i>
----------------	----------------

---

<b>I</b>	<b>Getting started</b>	<b>1</b>
1.1	What is statistical programming?	1
1.2	Outline of the book	2
1.3	The R package	3
1.4	Why use a command line?	3
1.5	Font conventions	4
1.6	Installation of R	4

---

<b>2</b>	<b>Introduction to the R language</b>	<b>5</b>
2.1	Starting and quitting R	5
2.1.1	Recording your work	6
2.2	Basic features of R	7
2.2.1	Calculating with R	7
2.2.2	Named storage	7
2.2.3	Functions	9
2.2.4	Exact or approximate?	9
2.2.5	R is case-sensitive	12
2.2.6	Listing the objects in the workspace	12
2.2.7	Vectors	12
2.2.8	Extracting elements from vectors	13
2.2.9	Vector arithmetic	14
2.2.10	Simple patterned vectors	15
2.2.11	Missing values and other special values	16
2.2.12	Character vectors	16
2.2.13	Factors	17
2.2.14	More on extracting elements from vectors	18
2.2.15	Matrices and arrays	18
2.2.16	Data frames	19
2.2.17	Dates and times	21
2.3	Built-in functions and online help	21
2.3.1	Built-in examples	22
2.3.2	Finding help when you don't know the function name	23
2.3.3	Built-in graphics functions	23
2.3.4	Additional elementary built-in functions	25
2.4	Logical vectors and relational operators	26
2.4.1	Boolean algebra	26
2.4.2	Logical operations in R	27
2.4.3	Relational operators	28
2.5	Data input and output	29
2.5.1	Changing directories	29

2.5.2	<code>dump()</code> and <code>source()</code>	29
2.5.3	Redirecting R output	30
2.5.4	Saving and retrieving image files	31
2.5.5	Data frames and the <code>read.table</code> function	31
2.5.6	Lists	31
	Chapter exercises	32
<hr/>		
<b>3</b>	<b>Programming statistical graphics</b>	<b>33</b>
3.1	High-level plots	33
3.1.1	Bar charts and dot charts	34
3.1.2	Pie charts	35
3.1.3	Histograms	35
3.1.4	Box plots	36
3.1.5	Scatterplots	38
3.1.6	QQ plots	39
3.2	Choosing a high-level graphic	41
3.3	Low-level graphics functions	42
3.3.1	The plotting region and margins	42
3.3.2	Adding to plots	43
3.3.3	Setting graphical parameters	45
	Chapter exercises	46
<hr/>		
<b>4</b>	<b>Programming with R</b>	<b>47</b>
4.1	Flow control	47
4.1.1	The <code>for()</code> loop	47
4.1.2	The <code>if()</code> statement	50
4.1.3	The <code>while()</code> loop	54
4.1.4	Newton's method for root finding	55
4.1.5	The <code>repeat</code> loop, and the <code>break</code> and <code>next</code> statements	57
4.2	Managing complexity through functions	59
4.2.1	What are functions?	59
4.2.2	Scope of variables	62
4.3	Miscellaneous programming tips	63
4.3.1	Using <code>fix()</code>	63
4.3.2	Documentation using <code>#</code>	64
4.4	Some general programming guidelines	65
4.4.1	Top-down design	67
4.5	Debugging and maintenance	72
4.5.1	Recognizing that a bug exists	72
4.5.2	Make the bug reproducible	73
4.5.3	Identify the cause of the bug	73
4.5.4	Fixing errors and testing	75
4.5.5	Look for similar errors elsewhere	75
4.5.6	The <code>browser()</code> and <code>debug()</code> functions	75
4.6	Efficient programming	77
4.6.1	Learn your tools	77
4.6.2	Use efficient algorithms	78
4.6.3	Measure the time your program takes	79

4.6.4	Be willing to use different tools	80
4.6.5	Optimize with care	80
	Chapter exercises	80
<hr/>		
<b>5</b>	<b>Simulation</b>	<b>82</b>
5.1	Monte Carlo simulation	82
5.2	Generation of pseudorandom numbers	83
5.3	Simulation of other random variables	88
5.3.1	Bernoulli random variables	88
5.3.2	Binomial random variables	89
5.3.3	Poisson random variables	93
5.3.4	Exponential random numbers	97
5.3.5	Normal random variables	99
5.4	Monte Carlo integration	101
5.5	Advanced simulation methods	104
5.5.1	Rejection sampling	104
5.5.2	Importance sampling	107
	Chapter exercises	109
<hr/>		
<b>6</b>	<b>Computational linear algebra</b>	<b>112</b>
6.1	Vectors and matrices in R	113
6.1.1	Constructing matrix objects	113
6.1.2	Accessing matrix elements; row and column names	115
6.1.3	Matrix properties	117
6.1.4	Triangular matrices	118
6.1.5	Matrix arithmetic	118
6.2	Matrix multiplication and inversion	119
6.2.1	Matrix inversion	120
6.2.2	The <i>LU</i> decomposition	121
6.2.3	Matrix inversion in R	122
6.2.4	Solving linear systems	123
6.3	Eigenvalues and eigenvectors	124
6.4	Advanced topics	125
6.4.1	The singular value decomposition of a matrix	125
6.4.2	The Choleski decomposition of a positive definite matrix	126
6.4.3	The QR decomposition of a matrix	127
6.4.4	The condition number of a matrix	128
6.4.5	Outer products	129
6.4.6	Kronecker products	129
6.4.7	<code>apply()</code>	129
	Chapter exercises	130
<hr/>		
<b>7</b>	<b>Numerical optimization</b>	<b>132</b>
7.1	The golden section search method	132
7.2	Newton–Raphson	135
7.3	The Nelder–Mead simplex method	138
7.4	Built-in functions	142

---

7.5	Linear programming	142
7.5.1	Solving linear programming problems in R	145
7.5.2	Maximization and other kinds of constraints	145
7.5.3	Special situations	146
7.5.4	Unrestricted variables	149
7.5.5	Integer programming	150
7.5.6	Alternatives to $\text{lp}()$	151
7.5.7	Quadratic programming	151
	Chapter exercises	157

---

<b>Appendix</b>	<b>Review of random variables and distributions</b>	158
-----------------	---	-----
