Preface xiii

Chapter 1. Banach Function Spaces 1

1. Banach Function Spaces 2
   Banach function norms \( p \); Banach function spaces \( X \); Fatou’s lemma; the Riesz-Fischer property.

2. The Associate Space 7
   The associate norm \( p' \); the associate space \( X' \); Hölder’s inequality; the Lorentz-Luxemburg theorem; the dual space \( X^* \).

3. Absolute Continuity of the Norm 13
   Functions of absolutely continuous norm; the subspace \( X_a \) of functions of absolutely continuous norm; the closure \( X_b \) of the bounded functions supported in sets of finite measure; comparison of \( X_a \), \( X_b \), and \( X \).

4. Duality and Reflexivity 19
   The associate space and duality; the dual of \( X_a \); conditions for coincidence of \( X' \) and \( X^* \); reflexivity and absolute continuity of the norm.

5. Separability 24
   \( \sigma(X, X') \)-completeness of Banach function spaces \( X \); separable measure spaces; separability of Banach function spaces; separability and reflexivity.

Exercises and Furthwer Results for Chapter 1 30
Notes for Chapter 1 33

vii
## Chapter 2. Rearrangement-Invariant Banach Function Spaces

1. Distribution Functions and Decreasing Rearrangements
   - The distribution function $\mu_f$; equimeasurable functions; the decreasing rearrangement $f^*$; the $L^p$-norm in terms of $\mu_f$ and $f^*$.

2. An Inequality of Hardy and Littlewood
   - The Hardy-Littlewood inequality; decreasing rearrangements of products; resonant and strongly resonant measure spaces.

3. An Elementary Maximal Function
   - The maximal function $f^{**}$; subadditivity of $f \to f^{**}$; the method of retracts; the Hardy-Littlewood-Pólya relation; Hardy's lemma; conditional expectations.

4. Rearrangement-Invariant Spaces
   - Rearrangement-invariant Banach function spaces; rearrangement-invariance of the associate space; order structure and the Hardy-Littlewood-Pólya relation; conditional expectations; the Luxemburg representation theorem.

5. The Fundamental Function
   - The fundamental function; duality and separability of rearrangement-invariant spaces; the Lorentz spaces $\Lambda(X)$ and $M(X)$; comparison of $X$, $\Lambda(X)$, and $M(X)$.

6. The Spaces $L^1 + L^\infty$ and $L^1 \cap L^\infty$
   - The norms in $L^1 + L^\infty$ and $L^1 \cap L^\infty$; Hölder's inequality; mutual associativity; extremal properties.

7. Measure-Preserving Transformations
   - Measure-preserving transformations; Lorentz’ lemma; Ryff’s theorem; recovery of $f$ from $f^*$ by a measure-preserving transformation.

Exercises and Further Results for Chapter 2

Notes for Chapter 2

## Chapter 3. Interpolation of Operators on Rearrangement-Invariant Spaces

1. Interpolation Spaces
   - Compatible couples; the spaces $X_0 + X_1$ and $X_0 \cap X_1$; admissible operators; interpolation pairs; interpolation spaces.
2. Interpolation Between $L^1$ and $L^\infty$
Admissible operators and the Hardy-Littlewood-Pólya relation; substochastic operators; the Hardy-Littlewood-Pólya theorem on substochastic matrices; the Calderón-Ryff theorem; interpolation spaces between $L^1$ and $L^\infty$.

3. The Hardy-Littlewood Maximal Operator
The Hardy-Littlewood maximal operator $M$; a weak-type estimate; Lebesgue's differentiation theorem; equivalence of $(Mf)^*$ and $f^{**}$; Hardy's inequalities; the Hardy-Littlewood maximal theorem.

4. The Hilbert Transform
The Hilbert transform $H$; the maximal Hilbert transform $\mathcal{H}$; the Loomis lemmas; the Stein-Weiss lemma; weak-type estimates for $H$ and $\mathcal{H}$; existence of the Hilbert transform; the M. Riesz theorem.

5. Operators of Joint Weak Type $(p_0, q_0; p_1, q_1)$
The Calderón operator $S_\sigma$; operators of joint weak type $(p_0, q_0; p_1, q_1)$; Calderón's theorem; indices of rearrangement-invariant spaces; Boyd's theorem; the Hardy-Littlewood maximal operator and the Hilbert transform on rearrangement-invariant spaces.

6. Norm-Convergence of Fourier Series
Fourier series; the conjugate-function operator; a.e. convergence of the principal-value integral; the conjugate-function operator as a multiplier; norm-convergence of Fourier series in rearrangement-invariant spaces.

7. Theorems of Lorentz and Shimogaki
Decreasing rearrangements and differences of functions; decomposition with respect to the Hardy-Littlewood-Pólya relation.

Exercises and Further Results for Chapter 3
174
Notes for Chapter 3
179

Chapter 4. The Classical Interpolation Theorems
1. The Riesz Convexity Theorem
Operators of strong type $(p, q)$; an interpolation theorem for positive integral operators; bilinear forms; the M. Riesz convexity theorem.

Chapter 5. The K-Method

1. The K-Method
   The Peetre J- and K-functionals; Gagliardo completion; the
   K-functional for \((L^1, L^\infty)\); the \((\theta, q)\)-spaces; the fundamental
   interpolation inequality; an interpolation theorem for \((\theta, q)\)-
   spaces; the k-method.

2. Structure Theorems for the \((\theta, q)\)-spaces
   Holmstedt's formula; the reiteration theorem; the J-method;
   the equivalence theorem; the density theorem; Wolff's
   theorem.

3. Monotone Interpolation Spaces
   Monotone Riesz-Fischer norms; monotone intermediate
   spaces; Cwikel's lemma; divisibility; characterization of
   monotone interpolation spaces.

4. Besov and Sobolev Spaces
   Modulus of smoothness; Besov spaces \(B^p_{\alpha,q}\); Sobolev spaces
   \(W^p_k\); K-functional for \((L^p, W^p_k)\); Marchaud's inequality;
   Sobolev type embedding theorems.

5. Interpolation Between \(W^1_k\) and \(W^\infty_k\)
   The Whitney covering lemma; Taylor polynomials; an
   extension theorem; the K-functional for \((W^1_k, W^\infty_k)\).

6. Re \(H^1\) and BMO
   The nontangential maximal operator; a theorem of Hardy
   and Littlewood; the Hardy space Re \(H^1\); the space BMO of
   functions of bounded mean oscillation; a lemma of Spanne
   and Stein; atomic decomposition; equivalent characteriza-
   tions of Re \(H^1\); the K-functional for \((\text{Re}(H^1), L^\infty)\); Feffer-
   man's duality theorem.

7. BMO and Weak-\(L^\infty\)
   Oscillation of \(f^*\) and \(f\); the John-Nirenberg lemma; weak-
   \(L^\infty\); the rearrangement-invariant hull of BMO; restricted
   weak type \((\infty, \infty)\); an interpolation theorem; the space BLO
   of functions of bounded lower oscillation; the Hardy-Little-
   wood maximal operator on BMO.

8. Interpolation Between \(L^1\) and BMO
   The sharp function; the space BMO(\(\mathbb{R}^n\)); the K-functional
   for \((L^1, \text{BMO})\); interpolation spaces between \(L^1\) and BMO;
   the Hardy-Littlewood maximal operator on BMO(\(\mathbb{R}^n\)).
9. Jones' Solution of $\bar{\partial}f = \mu$
Carleson measures; Jones' constructive solution of $\bar{\partial}f = \mu$.

10. Interpolation Between $H^1$ and $H^\infty$
The $K$-functional for $(H^1, H^\infty)$; characterization of the interpolation spaces between $H^1$ and $H^\infty$.
