

# QUANTUM STATISTICAL MECHANICS

Professor Emeritus WILLIAM C. SCHIEVE

*Physics Department, University of Texas at Austin, Texas*

*Center for Complex Quantum Systems*

Professor Emeritus LAWRENCE P. HORWITZ

*School of Physics Tel Aviv University Ramat Aviv, Israel*

*Department of Physics Bar Ilan University Ramat Gan, Israel*

CAMBRIDGE  
UNIVERSITY PRESS

# Contents

<i>Preface</i>	<i>page xi</i>
<b>1 Foundations of quantum statistical mechanics</b>	1
1.1 The density operator and probability	1
1.2 The Gleason theorem and consequences	6
1.3 Calculation of averages of observables	9
Appendix 1A: Gleason theorem	12
References	18
<b>2 Elementary examples</b>	19
2.1 Introduction	19
2.2 Harmonic oscillator	19
2.3 Spin one-half and two-level atoms	27
Appendix 2A: the Fokker–Planck equation	34
References	35
<b>3 Quantum statistical master equation</b>	37
3.1 Reduced observables	37
3.2 The Pauli equation	39
3.3 The weak coupling master equation for open systems	42
3.4 Pauli equation: time scaling	46
3.5 Reservoir states: rigorous results and models	53
3.6 The completely positive evolution	54
Appendix 3A: Chapman–Kolmogorov master equation	57
References	59
<b>4 Quantum kinetic equations</b>	61
4.1 Introduction	61
4.2 Reduced density matrices and the B.B.G.Y.K. hierarchy	61
4.3 Derivation of the quantum Boltzmann equation	63
4.4 Phase space quantum Boltzmann equation	66
4.5 Memory of initial correlations	76

4.6	Quantum Vlasov equation	79
Appendix 4A: phase space distribution functions		80
References		83
<b>5</b>	<b>Quantum irreversibility</b>	85
5.1	Quantum reversibility	85
5.2	Master equations and irreversibility	87
5.3	Time irreversibility of the generalized master and Pauli equations	87
5.4	Irreversibility of the quantum operator Boltzmann equation	89
5.5	Reversibility of the quantum Vlasov equation	90
5.6	Completely positive dynamical semigroup: a model	92
Appendix 5A: the quantum time reversal operator		94
References		96
<b>6</b>	<b>Entropy and dissipation: the microscopic theory</b>	98
6.1	Introduction	98
6.2	Macroscopic non-equilibrium thermodynamics	98
6.3	Dissipation and the quantum Boltzmann equation	105
6.4	Negative probability and the quantum $\mathfrak{H}$ theorem	111
6.5	Entropy and master equations	113
Appendix 6A: quantum recurrence		120
References		121
<b>7</b>	<b>Global equilibrium: thermostatics and the microcanonical ensemble</b>	123
7.1	Boltzmann's thermostatic entropy	124
7.2	Thermostatics	125
7.3	Canonical and grand canonical distribution of Gibbs	126
7.4	Equilibrium fluctuations	129
7.5	Negative probability in equilibrium	131
7.6	Non-interacting fermions and bosons	132
7.7	Equilibrium limit theorems	136
References		139
<b>8</b>	<b>Bose–Einstein ideal gas condensation</b>	141
8.1	Introduction	141
8.2	Continuum box model of condensation	142
8.3	Harmonic oscillator trap and condensation	145
8.4	${}^4\text{He}$ : the $\lambda$ transition	148
8.5	Fluctuations: comparison of the grand canonical and canonical ensemble	150
8.6	A master equation view of Bose condensation	152
Appendix 8A: exact treatment of condensate traps		155
References		158

<b>9 Scaling, renormalization and the Ising model</b>	159
9.1 Introduction	159
9.2 Mean field theory and critical indices	160
9.3 Scaling	167
9.4 Renormalization	169
9.5 Renormalization and scaling	172
9.6 Two-dimensional Ising model renormalization	174
References	177
<b>10 Relativistic covariant statistical mechanics of many particles</b>	178
10.1 Introduction	178
10.2 Quantum many-particle dynamics: the event picture	180
10.3 Two-event Boltzmann equation	183
10.4 Some results of the quantum event Boltzmann equation	187
10.5 Relativistic quantum equilibrium event ensembles	191
References	197
<b>11 Quantum optics and damping</b>	199
11.1 Introduction	199
11.2 Atomic damping: atomic master equation	199
11.3 Cavity damping: the micromaser: detection	206
11.4 Detection master equation for the cavity field	207
Appendix 11A: the field quantization and interaction	214
References	219
<b>12 Entanglements</b>	221
12.1 Introduction	221
12.2 Entanglements: foundations	221
12.3 Entanglements: Q bits	224
12.4 Entanglement consequences: quantum teleportation, the Bob and Alice story	226
12.5 Entanglement consequences: dense coding	228
12.6 Entanglement consequences: quantum computation	228
12.7 Decoherence: entanglement destruction	231
12.8 Decoherence correction (error correction)	235
Appendix 12A: entanglement and the Schmidt decomposition	236
References	238
<b>13 Quantum measurement and irreversibility</b>	240
13.1 Introduction	240
13.2 Ideal quantum measurement	241
13.3 Irreversibility: measurement master equations	243
13.4 An open system master equation model for measurement	246

13.5 Stochastic energy based collapse	248
References	251
<b>14 Quantum Langevin equation and quantum Brownian motion</b>	253
14.1 Introduction	253
14.2 Quantum Langevin equation	254
14.3 Quantum Langevin equation with measurement	260
References	262
<b>15 Linear response: fluctuation and dissipation theorems</b>	264
15.1 Introduction	264
15.2 Quantum linear response in the steady state	266
15.3 Linear response, time dependent	269
15.4 Fluctuation and dissipative theorems	272
15.5 Comments and comparisons	277
References	279
<b>16 Time-dependent quantum Green's functions</b>	281
16.1 Introduction	281
16.2 One- and two-time quantum Green's functions and their properties	282
16.3 Analytic properties of Green's functions	284
16.4 Connection to linear response theory	288
16.5 Green's function hierarchy truncation	289
16.6 Keldysh time-loop path perturbation theory	297
References	302
<b>17 Decay scattering</b>	303
17.1 Basic notions and the Wigner–Weisskopf theory	303
17.2 Wigner–Weisskopf method: pole approximation	306
17.3 Wigner–Weisskopf method and Lee–Friedrichs model with a single channel	312
17.4 Wigner–Weisskopf and multichannel decay	318
17.5 Wigner–Weisskopf method with many-channel decay: the Lee–Friedrichs model	321
17.6 Gel'fand triple	332
17.7 Lax–Phillips theory	335
17.8 Application to the Stark model	354
References	362
<b>18 Quantum statistical mechanics, extended</b>	365
18.1 Intrinsic theory of irreversibility	365
18.2 Complex Liouvillian eigenvalue method: introduction	366
18.3 Operators and states with diagonal singularity	367
18.4 Super operators and time evolution	369

18.5 Subdynamics and analytic continuation	371
18.6 The Pauli equation revisited	375
References	378
<b>19 Quantum transport with tunneling and reservoir ballistic transport</b>	379
19.1 Introduction	379
19.2 Pauli equation and boundary interaction	380
19.3 Ballistic transport	383
19.4 Green's function closed-time path theory to transport	385
References	389
<b>20 Black hole thermodynamics</b>	390
20.1 Introduction to black holes	390
20.2 Equilibrium thermodynamic analogies: the first law	394
20.3 The second law of thermodynamics and black holes	397
20.4 Extended entropy principle for black holes	399
20.5 Acausal evolution: extended irreversible dynamics in black holes	401
References	402
<b>A Problems</b>	404
A.1 Comments on the problems	404
A.2 "Foundations" problems	404
A.3 Kinetic dynamics problems	407
A.4 Equilibrium and phase transition problems	409
References	410
<i>Index</i>	411
