PREFACE xiii

Kelley J. Tilmon

PART I

Evolution of Populations and Species

1 Chemical Mediation of Host-Plant Specialization:
The Papilionid Paradigm 3

May R. Berenbaum and Paul P. Feeny

How Lepidopterans Prefer 4

How Lepidopteran Larvae Perform 4

Preference-Performance Relationships in
Lepidoptera 5

Chemical Mediation of Preference and Performance:
Papilionids as Paradigm 6

Identifying the Chemical Cues: Kairomones and
Allomones 8

Preference and Performance Genes 11

P450s and Host-Use Evolution 14

Conclusions 15

2 Evolution of Preference and Performance
Relationships 20

Timothy P. Craig and Joanne K. Itami

Limiting Constraints 21

Preference and Performance in Three Well-Studied
Interactions 22

Alternative Hypotheses 26

Testing Hypotheses on Preference and
Performance 27

Conclusion 27

3 Evolutionary Ecology of Polyphagy 29

Michael S. Singer

General Explanations for Host Specificity 30

What about Polyphagy? 31

Trade-offs as Explanations for Host-Plant Use 32

Testing Theory with Polyphagous Woolly Bear

Caterpillars 34

Conclusions 39

4 Phenotypic Plasticity 43

Kailen A. Mooney and Anurag A. Agrawal

Adaptive Value and Costs of Phenotypic Plasticity 43

The Consequences of Phenotypic Plasticity 48

Future Directions 51

5 Selection and Genetic Architecture of Plant
Resistance 58

Mary Ellen Czesak, Robert S. Fritz, and Cris Hochwender

Selection on Resistance within Populations 58

Genetic Architecture of Resistance Traits between
Populations and Species 61

Architecture of Resistance in a Willow Hybrid
System 62

Summary 66

6 Introgression and Parapatric Speciation in a Hybrid
Zone 69

J. Mark Scriber, Gabe J. Ordling, and Rodrigo J. Mercader

Hybrid Zones, "Evolutionary Novelties," and
Isolation 69

Climate Warming, Thermal Constraints, and
Voltinism 70

The Tiger Swallowtail Butterflies 70

Hybrid *Papilio* Populations and Species 75

The Nuts and Bolts 78

- 7 Host Shifts, the Evolution of Communication, and Speciation in the *Enchenopa binotata* Species Complex of Treehoppers 88
Reginald B. Cocroft, Rafael L. Rodríguez, and Randy E. Hunt
 Ecological Isolation in the *E. binotata* Complex 89
 Behavioral Sources of Assortative Mating 90
 Communication in a New Host Environment 93
 Summary 97
- 8 Host Fruit-Odor Discrimination and Sympatric Host-Race Formation 101
Jeffrey L. Feder and Andrew A. Forbes
 The Adaptive Zone Hypothesis 102
 Ecological Adaptation, Host-Specific Mating, and Reproductive Isolation 102
 Tom Wood and Ron Prokopy: Two Pioneers in the Study of Insect Behavior and Diversity 103
 Natural and Life History of *Rhagoletis pomonella* 103
 Behavioral Testing Using Synthetic Fruit Volatile Blends 104
 Genetic Analysis of Fruit-Odor Discrimination 107
 Physiological Basis for Fruit-Odor Discrimination 108
 A Genetic Model for Fruit-Odor Discrimination 109
 Theoretical Significance of the Fruit-Odor Discrimination Studies 110
 Future Directions and Conclusions 112
 Appendix: The Four-Component Genetic Model for Fruit-Odor Discrimination 112
- 9 Comparative Analyses of Ecological Speciation 117
Daniel J. Funk and Patrik Nosil
 Ecological Speciation 117
 Herbivorous Insect Exemplars 118
 Comparative Approaches and Ecological Speciation 120
 Herbivore Analyses and Insights 122
 Comparative Caveats 129
 Opportunities and Directions 131
- 10 Sympatric Speciation: Norm or Exception? 136
Douglas J. Futuyma
 Theory 137
 Biological Considerations 138
 Evidence on Sympatric Speciation 141
 The Allopatric Alternative 143
 Conclusions 144

PART II Co- and Macroevolutionary Radiation

- 11 Host-Plant Use, Diversification, and Coevolution: Insights from Remote Oceanic Islands 151
George K. Roderick and Diana M. Percy
 Islands as a Model System 151
 Lessons from Island Systems 152
 Conclusions 158
- 12 Selection by Pollinators and Herbivores on Attraction and Defense 162
Lynn S. Adler
 Selection by Pollinators on Plant Resistance 163
 Selection by Herbivores on Floral Traits 164
 Resistance and Attraction Traits May Not Be Independent 165
 Herbivores and Pollinators May Not Be Independent 166
 Abiotic Factors and Geographic Variation 167
 Future Directions 167
- 13 Adaptive Radiation: Phylogenetic Constraints and Ecological Consequences 174
Peter W. Price
 The Phylogenetic Constraints Hypothesis 175
 Adaptive Capture and Escape 176
 The Adaptive Radiation of Common Sawflies 177
 Convergence of Constraints 177
 Divergent Constraints 179
 The Similarities of Temperate and Tropical Insect Herbivores 180
 Adaptive Radiation in Temperate and Tropical Environments 183
- 14 Sequential Radiation through Host-Race Formation: Herbivore Diversity Leads to Diversity in Natural Enemies 188
Warren G. Abrahamson and Catherine P. Blair
 Species Cause Species: Sympatric Speciation through Host-Race Formation 188
 Sequential Radiation 189
 Conditions for Host-Race Formation 189
 Cases of Sequential Radiation via Host-Race Formation 190
 Example Showing No Differentiation 196
 Conclusions 197
 Sympatric Speciation Studies 199
- 15 The Oscillation Hypothesis of Host-Plant Range and Speciation 203
Niklas Janz and Sören Nylin
 The Oscillation Hypothesis 204
 Colonizations and Host-Range Expansions 204
 Synthesis: Speciation Rate 210
 Conclusion 213

16	Coevolution, Cryptic Speciation, and the Persistence of Interactions 216 <i>John N. Thompson</i> A Blending of Perspectives: Populations, Species, and Species Interactions 216 Cryptic Speciation in Insects 219 Cryptic Speciation in Plants and Its Effect on Interactions with Insects 221 Implications 222	20	Exotic Plants and Enemy Resistance 280 <i>John L. Maron and Montserrat Vilà</i> Rapid Evolution of Exotics in Response of Enemy Pressure 281 Exotics as Substrates for Studying the Evolutionary Response of Plants to Natural Enemies 281 Hypotheses and Evidence for Plant Defenses 281 Experimental Evidence for Evolution of Exotic Plant Defense 283 Response of St. John's Wort to an Altered Enemy Landscape 283 Among-Population Variation in Enemy Resistance 289 Are Differences in Exotic and Native Phenotypes the Product of Evolution? 290 Conclusions 291
17	Cophylogeny of Figs, Pollinators, Gallers, and Parasitoids 225 <i>Summer I. Silvieus, Wendy L. Clement, and George D. Weiblen</i> Background 225 Overview 227 Sampling and DNA Sequencing 227 Phylogenetic Analysis 230 Reconciliation Analysis 230 Phylogenies of Figs and Wasps 231 Host Specificity of Nonpollinating Fig Wasps 231 Double Dating of Figs and Fig Wasps 232 Modes of Speciation in Fig Pollinators, Gallers, and Parasitoids 236 Conclusions 237	21	Life-History Evolution in Native and Introduced Populations 296 <i>Robert F. Denno, Merrill A. Peterson, Matthew R. Weaver, and David J. Hawthorne</i> Life-History Strategy and Dispersal Ecology of <i>Prokelisia</i> Planthoppers 297 Geographic Distribution of the Insect and Host 298 Geographic Source of Introduced Populations 299 Genetic Variation in Native and Introduced Populations 300 Variation in Dispersal, Associated Reproductive Traits, and Voltinism 301 Genetic Basis for Geographic Variation in the Incidence of Dispersal 302 Habitat Factors Underlying Geographic Variation in Dispersal 303 Conclusions and Synthesis 305
18	The Phylogenetic Dimension of Insect-Plant Interactions: A Review of Recent Evidence 240 <i>Isaac S. Winkler and Charles Mitter</i> Conservatism of Host-Plant Use 241 Signatures of Long-Term History in Extant Insect-Plant Interactions 248 Diversification of Phytophagous Insects 253 Synopsis and Conclusions 256	22	Rapid Natural and Anthropogenic Diet Evolution: Three Examples from Checkerspot Butterflies 311 <i>Michael C. Singer, Brian Wee, Sara Hawkins, and Marie Butcher</i> Checkerspot Butterflies as a Study System 311 First Host Shift, at Schneider's Meadow 313 Second Host Shift, at Rabbit Meadow 314 Third Host shift, at Sonora Junction 318 Types of Anthropogenic Effect 319 Cryptically Anthropogenic Effects 320 Conclusions 322
PART III Evolutionary Aspects of Pests, Invasive Species, and the Environment		23	Conservation of Coevolved Insect Herbivores and Plants 325 <i>Carol L. Boggs and Paul R. Ehrlich</i> Habitat Destruction 326 Species Introductions 327 Changes in Disturbance Regimes 329 Climate Change 329 Complex Interactions: Conservation Implications 330 Conclusion 330
19	Evolution of Insect Resistance to Transgenic Plants 267 <i>Bruce E. Tabashnik and Yves Carrière</i> Transgenic Crops with <i>Bacillus thuringiensis</i> (Bt) Toxins 267 Bt Toxins and Their Mode of Action 268 Genetic Basis of Resistance to Bt Toxins 268 The Refuge Strategy for Delaying Pest Resistance to Bt Crops 269 Pink Bollworm versus Bt Cotton in Arizona 271 Conclusions and a Look to the Future 274	INDEX 333
