

Biologische Rhythmen - Schlaf

J. Zulley, E. Haen, R.Lund & T. Roenneberg (eds)

Vol. 14

Alfred Meier-Koll

Biological Rhythms
in the
Anthropological Context

S. Roderer Verlag, Regensburg 2006

CONTENTS

Introduction	11
Chapter I	
A First Concept of Time	19
Speculations about the origin of 'time'	24
Chapter II	
Time and Biological Clocks	29
Behavior cycles, social synchronization and the chance to survive	30
Where are the rhythms generated?	35
Genetic analysis of circadian and ultradian rhythms	39
Chapter III	
Endogenous Time Structures in Humans	47
Time structures in affective illness	47
Endogenous rhythms of sleep and wakefulness	52
A mathematical model of the human circadian system	57
Considerations on sleep disorders in manic-depressive patients	59
Ultradian oscillations in sleep stages	62
REM sleep and thermostatic brain warming	66
A multi-periodic clockwork	69
Chapter IV	
Biological Rhythms in Early States of Human Development	71
Cycles in the fetus and the neonate	73
Eye movement activity in premature infants	82
The newborn's REM sleep	85

REM cycle and sleep-waking behavior	88
Endogenous rhythms in the sleep-waking behavior of infants	94
The infant <i>Korbi</i> , a single-case follow-up study	104
Sleep-waking pattern and neuronal development	107
The spectrum of 'wake density'	109
A computer simulation of the developing sleep waking pattern	110
REM sleep, homeothermy and consolidation of memory in the neonate	118
The ontogenesis of REM sleep	120
The phylogenesis of REM sleep	122
REM augmentation by learning	124
REM sleep and the consolidation of memory	126
An integrative view	127
Long-term development of the infant's sleep-waking behavior	128
Evidence of non-linear dynamics	132
Chronobiological schedules and maternal investment	134
Chapter V	
Ultradian Behavior Cycles in Children and Elderly Humans	138
Free play of two German children	138
<i>Ram</i> , an East Indian child	144
<i>Omadana</i> , a !Ko-bushmen child	149
Daily activities of elderly humans	151
Chapter VI	
Ultradian Behavior Cycles in Mentally Impaired	159
Observation technique and data handling	159
Phase relationships between different stereotyped activities	168

Ultradian multi-oscillations	176
Ultradian rhythms of stereotyped hand waving and cerebral dominance	178
Chapter VII	
Ultradian Rhythms of an Asymmetric Brain	183
Rhythms in competitive, verbal processing of the two brains	186
REM-sleep cycle in relation to ultradian rhythms of dichotic listening performance	191
<i>A limit cycle model of an ultradian brainstem oscillator</i>	196
One major factor that might switch a brainstem oscillator	202
Lateralized, ultradian rhythms of tactile discrimination	204
Sex and right-left differences of cerebral, ultradian rhythms	213
Chapter VIII	
Lateralized, Ultradian Rhythms in Time and Space	216
A chronobiological field study in Kenyan Masai shepherds	217
Ultradian route-patterns	220
Do cerebral, ultradian rhythms scan the space?	223
Mental maps	224
Speculations about ultradian route-patterns and the hippocampal mapping	225
Consolidation of spatial memory during the sleep	227
Two separated maps in the two cerebral hemispheres	228
Mental walks through an artificial maze	229
Walks through a simple maze	234
Walks through a complex maze	235
Spatial information and ultradian rhythms in the two hemispheres	238
An evolutionary scenario	239

Chapter IX	
Ultradian Periods in Long-Term Rituals	242
A Tibetan ritual and its history	244
The time-structure of the ritual	247
A time-frame of mental states	250
Chapter X	
Cycles in a Community of Foragers and Planters	255
Behavior scoring of single men working in lots	257
Behavior whilst fishing	261
Synchronization of behavior in one woman and her husband	263
Synchronized activity cycles in women	264
Group activities	267
Group locomotion and social aggregation	269
Behavior cycles in non-human primates	274
Rhythms of hormonal and motor activities	278
Social coupling	279
An artificial community	280
The adaptive significance of socially synchronized behavior cycles	284
References	287
Index	301
