

Comparative Hydrology, Water Quality, and Ecology of Selected Natural and Augmented Freshwater Wetlands in West-Central Florida

By T.M. Lee, K.H. Haag, P.A. Metz, and L.A. Sacks

Prepared in cooperation with
Pinellas County
Southwest Florida Water Management District
Tampa Bay Water

Professional Paper 1758

**U.S. Department of the Interior
U.S. Geological Survey**

Contents

Abstract.....	1
Introduction.....	3
Purpose and Scope	5
Description of Study Area	7
Rainfall Patterns and Regional Ground-Water Withdrawals	7
Description of Study Design	9
Acknowledgments.....	11
Wetland Hydrogeologic Setting	13
Regional Hydrogeology.....	13
Hydrogeologic Methods	15
Basin Stratigraphy	21
Sub-Wetland Stratigraphy	21
Radium-226	32
Evidence of Karst Features in Wetland Basins	35
Ground-Water Flow Patterns in Wetland Basins	37
Overview of Wetland Hydrogeologic Settings.....	43
Wetland Water Budgets	45
Methods of Computation	46
Rainfall and Evapotranspiration.....	48
Wetland Stage, Volume, and Area.....	48
Wetland Leakage	49
Effect of Downward Head Differences on Wetland Leakage	50
Effect of Hydraulic Conductivity on Wetland Leakage	52
Case Studies of Wetland Leakage	53
Duck Pond Augmented Marsh	53
S-63 Augmented Cypress.....	54
W-5 Augmented Cypress	56
Runoff to Wetlands	59
Overview of Wetland Water Budgets.....	60
Wetland Water Quality and Geochemistry of Wetland Basins	63

Contents (Continued)

Water-Quality and Geochemical Methods	63
Water-Quality Constituents	64
Field Properties and Major Ions.....	64
Nutrients and Dissolved Organic Carbon.....	68
Stable Isotopes	69
Basin Geochemistry	70
Field Properties and Major Ions.....	70
Nutrients and Dissolved Organic Carbon.....	73
Stable Isotopes	73
Overview of Water Quality and Geochemistry.....	75
Wetland Flooding Characteristics.....	77
Methods of Flooded Area Determination	78
Changes in Extent of Flooded Area.....	78
Marshes	79
Cypress Wetlands	81
Comparison of Recent and Historical Flooded Area Duration Distributions	83
Natural Wetlands	84
Augmented Wetlands	87
Impaired Wetlands.....	87
Seasonal Average Flooding Patterns	91
Overview of Flooding Characteristics	93
Wetland Ecology	95
Methods of Ecological Data Collection and Interpretation	95
Periphyton.....	95
Wetland Vegetation.....	96
Macroinvertebrates	97
Periphyton	98
Biomass and Chlorophyll- <i>a</i>	98
Community Composition.....	99
Wetland Vegetation	102
Comparison of Vegetation Communities	102
Species Richness	104
Relative Abundance of Wetland Plants by Indicator Category	105
Plant Biomass in Marshes	109
Tree Density and Size in Cypress Wetlands.....	109
Effects of Environmental Stressors on Wetland Plant Communities	109
Macroinvertebrates.....	112
Marsh Macroinvertebrate Communities	112
Cypress Macroinvertebrate Communities	119
Functional Feeding Groups	119
Macroinvertebrates as Ecological Indicators in Wetlands	127
Overview of Wetland Ecology.....	130
Summary and Conclusions.....	131
References Cited.....	135
Glossary.....	145

Appendixes

1. Monthly rainfall at the marsh wetlands.....	147
2. Monthly rainfall inside the canopy at the cypress wetlands.....	148
3. Relation between rainfall measurements inside and outside of the tree canopy at the cypress wetlands.....	149
4. Evapotranspiration estimates for marsh and cypress wetlands.....	150
5. Bathymetric maps for the 10 study wetlands showing location of vegetation plots.....	151-152

Figures

1. Diagram showing conceptualized isolated wetland showing the changing size of the flooded area.....	4
2. Map showing location of study wetlands in the northern Tampa Bay area, west-central Florida.....	6
3-5. Graphs showing:	
3. Regional annual rainfall departures from the long-term average, 2000 to 2004.....	8
4. Annual rainfall measured at the marsh and cypress wetlands during 2001 to 2003 compared to the long-term average rainfall.....	8
5. The average annual daily ground-water withdrawal from the 11 Tampa Bay Water well fields, 1988 to 2004.....	8
6-8. Diagrams showing:	
6. Approximate time line of data collection in the two wetland types.....	9
7. Landscape features and hydrogeologic framework of mantled karst terrain in west-central Florida.....	14
8. Example of dissolution and subsidence forming wetlands in mantled karst terrain.....	14
9. Maps showing location of data-collection sites for the marsh wetlands.....	22
10. Maps showing location of data-collection sites for the cypress wetlands.....	23
11-18. Generalized hydrogeologic sections and vertical head distribution for:	
11. HRSP Natural Marsh at Hillsborough River State Park.....	24
12. Duck Pond Augmented Marsh at Cross Bar Well Field.....	25
13. W-3 Augmented Marsh at Cypress Creek Well Field.....	26
14. W-29 Impaired Marsh at Cypress Creek Well Field.....	27
15. S-68 Natural Cypress at Starkey Well Field.....	28
16. S-63 Augmented Cypress at Starkey Well Field.....	29
17. W-5 Augmented Cypress at Cypress Creek Well Field.....	30
18. W-19 Impaired Cypress at Cypress Creek Well Field.....	31
19-22. Graphs showing:	
19. Vertical profiles of bulk gamma density and grain size in sediment cores from GS Natural Marsh and W-29 Impaired Marsh.....	33
20. Average, minimum, and maximum radium-226 activity from surface sediment samples collected in July 2002 and May 2004.....	34
21. Vertical profiles of radium-226 activity in sediment cores taken from W-3 Augmented Marsh, W-29 Impaired Marsh #1, W-29 Impaired Marsh #2, and GS Natural Marsh.....	34
22. Ground-penetrating radar profiles with interpreted geologic features below W-29 Impaired Marsh, Duck Pond Augmented Marsh, S-63 Augmented Cypress basin, and Duck Pond Augmented Marsh basin.....	36

23. Diagram showing conceptualized interactions of wetlands with ground-water recharge and ground-water flow through	37
24. Maps showing ground-water flow patterns around the marsh wetlands during representative dry-season conditions.....	38
25. Graphs showing wetland stage and ground-water levels in selected surficial and Upper Floridan aquifer wells in the marsh wetland basins	39
26. Maps showing ground-water flow patterns around cypress wetlands during representative dry-season conditions.....	41
27. Graphs showing wetland stage and ground-water levels in selected surficial and Upper Floridan aquifer wells in the cypress wetland basins.....	42
28-31. Box plots of:	
28. Daily linear leakage rates in the study wetlands	49
29. Downward head differences at each wetland during its water-budget period	50
30. Elevation differences between the bottom of the wetland and the head in the Upper Floridan aquifer at W-29 Impaired Marsh for three time periods, marshes from December 2000 through September 2002, and cypress wetlands from November 2002 through July 2004.....	51
31. Leakage below the study wetlands	53
32-36. Graphs showing:	
32. Annual water budget for Duck Pond Augmented Marsh in 2001	54
33. Daily water-budget residual for Duck Pond Augmented Marsh and head in the Upper Floridan aquifer during December 2000–September 2002	54
34. Daily average head in the Upper Floridan aquifer in relation to daily linear leakage rate from Duck Pond Augmented Marsh.....	54
35. Daily rainfall, daily water-budget residual, and head in the Upper Floridan aquifer at S-63 Augmented Cypress wetland during November 2002–July 2004	55
36. Daily average head in the Upper Floridan aquifer in relation to daily linear leakage rate at S-63 Augmented Cypress wetland.....	55
37. Maps showing water-table configuration at W-5 Augmented Cypress wetland on May 10, 2004 before augmentation, and on June 1, 2004 after 23 days of augmentation	57
38-40. Graphs showing:	
38. Daily augmentation volume and flooded area in W-5 Augmented Cypress wetland during the augmentation experiment	58
39. Response of the water table below W-5 Augmented Cypress wetland to augmentation.....	58
40. Daily linear leakage rate and flooded area in W-5 Augmented Cypress wetland during the augmentation experiment	58
41. Stiff diagrams for surface water in marsh and cypress wetlands	65
42. Box plots of field properties and chemical constituents in surface waters of augmented and unaugmented wetlands.....	67
43. Plot showing organic nitrogen and dissolved organic carbon in wetland surface water.....	69
44. Box plot of nitrogen to phosphorus ratio in wetland surface water	70

45. Plot showing delta deuterium and delta ¹⁸ O in wetland surface water and augmentation water.....	70
46. Stiff diagrams for surface water and shallow ground water at selected wetlands.....	71
47. Plots showing delta deuterium and delta ¹⁸ O in wetland surface water, shallow ground water, and augmentation water from the Upper Floridan aquifer at W-5 Augmented Cypress, S-63 Augmented Cypress, and S-68 Natural Cypress.....	74
48. Graphs showing percentage of the total wetland area flooded on average each week in the natural, augmented, and impaired marshes from December 12, 2000 to September 30, 2002.....	80
49. Plot showing soil moisture content in HRSP Natural Marsh and W-29 Impaired Marsh during the same time period.....	81
50. Plot showing the relation between daily average soil moisture in the top one foot of soil and the daily average water-table depth below W-29 Impaired Marsh.....	81
51. Graphs showing percentage of the total wetland area flooded on average each week in the natural, augmented, and impaired cypress wetlands from December 11, 2002 to July 27, 2004.....	82
52. Graph showing hourly variation in flooded area at S-63 Augmented Cypress from December 24, 2003 to December 31, 2003.....	82
53. Diagrams showing conceptualized wetland showing the boundary of the flooded area located in different 20-percent intervals of the total wetland area.....	83
54-58. Graphs showing the recent and historical flooded-area duration distributions and maps showing the shapes of these flooded areas in:	
54. GS Natural Cypress and S-68 Natural Cypress.....	85
55. HRSP Natural Marsh and GS Natural Marsh.....	86
56. Duck Pond Augmented Marsh and W-3 Augmented Marsh.....	88
57. W-5 Augmented Cypress and S-63 Augmented Cypress.....	89
58. W-29 Impaired Marsh and W-19 Impaired Marsh.....	90
59-65. Graphs showing:	
59. Historical monthly average flooded area in the study wetlands.....	92
60. Relative abundance of dominant algal groups in marsh and cypress wetlands.....	99
61. Relative abundance of obligate, facultative wet, facultative, and facultative upland plants in marsh and cypress wetlands.....	108
62. Number of tolerant and intolerant plant species at natural, impaired, and augmented wetlands.....	110
63. Biomass, density, and taxa richness of macroinvertebrates in marsh wetlands.....	112
64. Shannon diversity of macroinvertebrates in marsh and cypress wetlands.....	113
65. Biomass, density, and taxa richness of macroinvertebrates in cypress wetlands.....	120
66. Pie chart showing the proportion of macroinvertebrate functional feeding groups in marsh and cypress wetlands.....	121
67. Graph showing abundance of Chironomidae, all Diptera, and all macroinvertebrates in marsh and cypress wetlands.....	128

Tables

1. Average ground-water withdrawal rates at selected Tampa Bay Water regional well fields during the study	9
2. Names, locations, and physical characteristics of study wetlands	10
3. Well characteristics and data collected for wells used in the study.....	16
4. Water-budget characteristics and selected flux rates for the study wetlands	47
5. Wetland leakage rate statistics.....	49
6. Regression results relating the daily rainfall volume to the daily change in wetland volume at the unaugmented wetlands.....	59
7. The volume ratio of runoff to rainfall in the study wetlands.....	59
8. Range and median water quality for surface water in wetlands	66
9. Range and median water quality for ground water in wetland basins.....	72
10. Description of stage data used for the historical flooding analyses	79
11. Percentage of the historical time each wetland area interval was flooded	87
12. The percentage of time that more than half of the total wetland area was flooded, based on stage data from 1996 to 2003	93
13. Average duration of flooding at deepest point in wetland, in months per year, based on stage data from 1996 to 2003.....	93
14. Median biomass of periphyton samples collected in study wetlands, 2002-04	98
15. Median biomass and chlorophyll- <i>a</i> of periphyton samples collected in study wetlands during September–October 2003.....	98
16. Median diatom species richness and most abundant diatom species in study wetlands	100
17. Van Dam Ecological Indicator values for diatoms in study wetlands.....	101
18. Jaccard's Similarity Index matrices (using all species greater than 1 percent of abundance) for vegetation in fixed plots in marsh wetlands, 2000–04.....	102
19. The percentage of time that fixed vegetation plots were flooded during the recent period (2000–02 or 2002–04), based on stage data and bathymetry.....	103
20. Jaccard's Similarity Index matrices (using all species greater than 1 percent of abundance) for vegetation in fixed plots in cypress wetlands, 2000–04.....	104
21. Jaccard's Similarity Index comparing vegetation in fixed plots sampled during 2000-02 (the period of average rainfall) with vegetation in fixed plots sampled during 2002–04 (the period of above-average rainfall and reduced ground-water pumping).....	105
22. Plant species in fixed and randomly located plots in marsh wetlands	106
23. Plant species in fixed and randomly located plots in cypress wetlands	107
24. Biomass of vegetation in marsh wetlands	109
25. Wetland plants that tend to decrease or increase in abundance with disturbance.....	111
26. Summary of macroinvertebrate community assessment.....	113
27. Mean density, frequency of occurrence, and functional feeding group classification of macroinvertebrates in marsh wetlands	114-118
28. Mean density, frequency of occurrence, and functional feeding group classification of macroinvertebrates in cypress wetlands	122-126
29. Occurrence of fish and larval amphibians (tadpoles) in study wetlands.....	129
