

Comparative Plant Ecology

a functional approach to common British species

SECOND EDITION

J. P. Grime J. G. Hodgson R. Hunt

Contents

List of panels	vii	Methods used in Survey II	18
List of figures	viii	Outline results from Survey II	21
List of tables	ix	Habitats	21
Preface	xi	Altitude	21
Acknowledgements	xii	Slope	21
Foreword to 1988 Edition	xii	Aspect	21
Foreword	xiii	Soil pH	22
1 Introduction		Species diversity	22
Aims and methods of this book	1	Hydrology	23
The comparative approach to the British flora	1	Bare soil	23
Origins (1939-1970)	1	Phenology, demography and regeneration	23
Two decades of 'creative conflict' (1970-1990)	2	Rationale	23
Scaling up (1990-present)	2	Shoot phenology	23
Composition of the Species Accounts	3	Seed banks	25
2 Plant Functional Types		Screening experiments	26
The need for a functional classification of plants	5	Rationale	26
Tradeoffs: the basis for the evolution of widely-recurrent plant functional types	5	Nuclear DNA amount	26
Data shortages: a world-wide problem	5	Germination characteristics	27
Different kinds of functional types for different ecological purposes	8	Relative growth rate	28
Primary plant functional types	9	Variation in screened attributes	28
The CSR model	9	The scientific literature	29
The equilibrium between stress, disturbance and competition	11	4 The contents of the Species Accounts	
Selection processes and evolutionary responses	12	Introduction	31
Competition for resources	12	Nomenclature	31
Resource shortage	12	Life-form	31
Disturbance	12	Phenology	31
Objections to CSR theory	12	Height	32
Competition	13	Seedling RGR	32
Stress	13	Specific leaf area (SLA) and leaf dry matter content (DMC)	32
Disturbance	13	Nuclear DNA content and chromosome number	33
Uses and limitations of CSR theory	13	Nuclear DNA amount (genome size)	33
3 Data sources for the Species Accounts		Chromosome number	33
Introduction	17	Established strategy	33
Vegetation surveys	17	Regenerative strategies	33
Survey field work	17	Flowers	36
Features of the survey area	17	Germinule	36
		Germination	36
		Biological flora	37
		Geographical distribution	37
		Habitats	37
		Gregariousness	37
		Altitude	37
		Slope	37
		Aspect	37
		Hydrology	38
		Soil pH	38

Bare soil	38	Geographical distribution	53
Δ ordination	38	Habitats	54
Associated floristic diversity	39	Gregariousness	54
Similarity in habitats	39	Altitude	55
Commonest associated species	39	Slope	56
Synopsis	39	Aspect	57
Current trends	39	Hydrology	57
		Soil pH	57
5 Interpretation and use of the Species Accounts		Bare soil	57
Introduction	41	Triangular ordination	58
Autecological implications	41	Associated floristic diversity	58
Nomenclature	41	Similarity in habitats	59
Life-form	41	Commonest associates	60
Phenology	42	Implications for communities and ecosystems	61
Seedling RGR	42	Introduction	61
Nuclear DNA amount	44	Communities	61
Chromosome number	46	Dominants	61
Established strategy	46	Subordinates	61
Competitors	46	Transients	65
Stress-tolerators	47	Co-existence mechanisms: theory	65
Ruderals	47	Co-existence mechanisms: real communities	65
Intermediate strategies	47	Community dynamics	66
Regenerative strategies	47	Ecosystems	73
Vegetative expansion	48	The mass ratio hypothesis	73
Seasonal regeneration in vegetation gaps	48	Plant traits that drive ecosystem processes	75
Regeneration involving a persistent seed bank	48		
Regeneration involving numerous widely-dispersed seeds or spores	49	6 The Species Accounts	81
Regeneration involving a bank of persistent juveniles	49		
Flexibility in regeneration	49	7 Tables of attributes	
Regenerative failure	49	Introduction	645
Failure in plants with a single regenerative strategy	49	Explanation of tables	
Failure in plants with more than one regenerative strategy	49	Table 7.1 (Ecological attributes)	645
Flowers	50	Table 7.2 (Attributes of the established phase)	647
Germinule	50	Table 7.3 (Attributes of the regenerative phase)	648
Germination	51	Table 7.1	650
Initial germinability	51	Table 7.2	664
Response to dry storage	51	Table 7.3	677
Response to chilling	51	References	691
Response to scarification	51		
Response to temperature	51	Subject Index	719
Response to light	52		
Germination rate	52	Species Index	735
Epigeal and hypogeal germination	53		
Biological flora	53
