<i>Preface to the Third Edition</i>	<i>xvii</i>
<i>Preface to the Second Edition</i>	<i>xix</i>
<i>Preface to the First Edition</i>	<i>xxi</i>
<i>Abbreviations</i>	<i>xxiii</i>

1 Introduction

Background	1
Advantages of Tissue Culture	4
Control of the Environment	4
Characterization and Homogeneity of Sample	4
Economy	4
Disadvantages	4
Expertise	4
Quantity	4
Dedifferentiation and Selection	5
Origin of Cells	5
Instability	5
Major Differences <i>In Vitro</i>	5
Definition of Types of Tissue Culture	5

2 Biology of the Cultured Cell

The Culture Environment	9
Cell Adhesion	9

Initiation of the Culture	11
Evolution of Cell Lines	11
The Development of Continuous Cell Lines	12
Dedifferentiation	13
What Is a Cultured Cell?	14
Functional Environment	14
Cell Cycle Control	15

3 Design and Layout of the Laboratory

Planning	17
Construction and Layout	18
Sterile Handling Area	19
Laminar Flow	20
Incubation	21
Hot Room	22
Service Bench	25
Preparation	25
Wash-Up	27
Storage	27

4 Equipping the Laboratory

Essential Equipment	31
Incubator	31
Sterilizer	31
Refrigerators and Freezers	32
Inverted Microscope	33
Washing Up	34
Sterilizing and Drying	36
Water Purification	36
Centrifuge	36
Cell Freezing	36
Beneficial Equipment	38
Laminar Flow	38
Cell Counter	38
Aspiration Pump	38
CO ₂ Incubator	39
Balances, pH Meter, and Osmometer	40
Upright Microscope	40
Dissecting Microscope	40
Temperature Recording	40
Magnetic Stirrer	42
Roller Racks	42
Fluid Handling	42
Useful Additional Equipment	46
Low-Temperature Freezer	46
Glassware Washing Machine	46
Video Camera and Monitor	47
Colony Counter	48
Cell Sizing	49
Controlled-Rate Freezer	49

Centrifugal Elutriator	49
Flow Cytometer	49
Consumable Items	49
Pipettes	49
Culture Vessels	49
Sterile Containers	50
Syringes and Needles	50
Sterilization Filters	50

5 Aseptic Technique

Objectives of Aseptic Technique	51
Quiet Area	53
Work Surface	53
Personal Hygiene	53
Pipetting	53
Sterile Handling	55
Swabbing	55
Capping	55
Flaming	55
Handling Bottles and Flasks	56
Pouring	56
Laminar Flow	56
Standard Procedure	57

6 Laboratory Safety and Biohazards

General Safety	62
Operator	62
Equipment	62
Glassware and Sharp Items	63
Chemical Toxicity	63
Gases	63
Liquid Nitrogen	63
Fire	64
Radiation	65
Biohazards	66
Levels of Containment	66
Human Biopsy Material	66
Disposal	68

7 The Culture Environment: Substrate, Gas Phase, Medium and Temperature

The Substrate	71
Glass	71
Disposable Plastic	72
Microcarriers	72

Sterilization of Plastics	72
Alternative Artificial Substrates	72
Treated Surfaces	73
Feeder Layers	74
Three-Dimensional Matrices	74
Nonadhesive Substrates	74
Liquid—Gel or Liquid—Liquid Interfaces	75
Hollow Fibers	75
Filter Well Inserts	76
Culture Vessels	76
The Gas Phase	79
Oxygen	79
Carbon Dioxide	80
Media and Supplements	82
Physical Properties	83
pH	83
Buffering	83
Osmolality	83
Temperature	84
Viscosity	84
Surface Tension and Foaming	84
Constituents of Media	84
Balanced Salt Solutions	84
Defined Media	85
Amino Acids	85
Vitamins	88
Salts	88
Glucose	88
Organic Supplements	90
Hormones and Growth Factors	90
Serum	90
Protein	90
Polypeptides	91
Hormones	91
Nutrients and Metabolites	91
Minerals	91
Inhibitors	91
Serum-Free Media	91
Advantages of Serum-Free Medium	92
Selective Media	93
Disadvantages of Serum-Free Media	93
Replacement of Serum	94
Selection and Development of Serum-Free Medium	97
Preparation of Serum-Free Media	98
Commercially Available Serum-Free Media	98
Serum Substitutes	98
Conclusions	98
Selection of Medium and Serum	100
Batch Reservation	100
Testing Serum	100
Other Supplements	101
Embryo Extract	101
Conditioned Medium	101
Incubation Temperature	101

8 Preparation and Sterilization

Apparatus	105
Glassware	105
Pipettes	107
Screw Caps	107
Selection of Detergent	109
Miscellaneous Equipment	111
Alternative Methods of Sterilization	112
Reagents and Media	112
Water	112
Balanced Salt Solutions	114
Media	114
Powdered Media	117
Autoclavable Media	117
Filter Sterilization	117
Sterility Testing	118
Culture Testing	119
Storage	121
Serum	122
Preparation and Sterilization of Other Reagents	125

9 Disaggregation of the Tissue and Primary Culture

Isolation of the Tissue	127
Mouse Embryos	128
Hen's Egg	129
Human Biopsy Material	133
Primary Culture	133
Primary Explant Technique	133
Enzymatic Disaggregation	135
Disaggregation in Warm Trypsin	136
Trypsin at 4°C	136
Chick Embryo Organ Rudiments	139
Other Enzymatic Procedures	142
Collagenase	142
Mechanical Disaggregation	146
Separation of Viable and Nonviable Cells	147

10 Maintenance of the Culture: Cell Lines

Nomenclature	149
Routine Maintenance	150
Replacement of Medium	150
Volume, Depth, and Surface Area	153
Changing the Medium or "Feeding" a Culture	153
Maintenance Medium	153
Subculture	153
Cell Concentration and Density at Subculture	156

Propagation in Suspension	156
Slow Cell Growth	157

11 Cloning and Selection of Specific Cell Types

Cloning	161
Dilution Cloning	161
Stimulation of Plating Efficiency	162
Multiwell Dishes	166
Semisolid Media	166
Isolation of Clones	169
Suspension Clones	171
Selective Media	172
Isolation of Genetic Variants	172
Interaction With Substrate	173
Selective Adhesion	173
Selective Detachment	174
Nature of Substrate	174

12 Physical Methods of Cell Separation

Cell Size and Sedimentation Velocity	179
Unit Gravity Sedimentation	179
Centrifugal Elutriation	184
Cell Density and Isopyknic Sedimentation	185
Fluorescence-Activated Cell Sorting	189
Other Techniques	192
Immune "Panning" Technique for Separation of Human Hemopoietic Progenitor Cells	192
Magnetic Sorting	194

13 Characterization

Introduction	197
Species Identification	197
Lineage or Tissue Markers	197
Unique Markers	198
Transformation	200
Morphology	200
Staining	201
Culture Vessels for Cytology: Monolayer Cultures	201
Suspension Culture	201
Photography	204
Chromosome Content	205
Chromosome Preparations	205
Chromosome Banding	206
Chromosome Analysis	206
Chromosome Painting	207
DNA Content	208

DNA Hybridization	208
DNA Fingerprinting	210
Multilocus DNA Fingerprinting of Cell Lines	210
RNA and Protein	212
Enzyme Activity	213
Isoenzymes	213
Antigenic Markers	215
Indirect Immunofluorescence	216
Differentiation	217

14 Induction of Differentiation

Stages of Commitment and Differentiation	220
Proliferation and Differentiation	220
Commitment and Lineage	220
Markers of Differentiation	222
Induction of Differentiation	223
Soluble Inducers	223
Cell Interaction	224
Cell–Matrix Interactions	226
Polarity and Cell Shape	226
Differentiation and Malignancy	226
Practical Aspects	227
Preparation of Collagen Gel	227

15 The Transformed Phenotype

What Is Transformation?	231
Anchorage Independence	234
Suspension Cloning	234
Contact Inhibition and Density Limitation of Growth	235
Growth on Confluent Monolayers	236
Genetic Abnormalities	238
Chromosomal Aberrations	238
Cell Products and Serum Dependence	238
Tumor Angiogenesis Factor (TAF)	239
Plasminogen Activator	239
Invasiveness	239
Tumorigenesis	239

16 Contamination

Types of Microbial Contamination	243
Monitoring Cultures for Mycoplasmas	247
Fluorescent Technique for Detecting Mycoplasmas	247
Alternative Methods	249
Eradication of Mycoplasma Infection	249
Detection of Microbial Contamination	250
Persistent Contamination	251
Cross-Contamination	251
Conclusions	251

17 Instability, Variation, and Preservation

Environment	253
Selective Overgrowth, Transformation, and Senescence	253
Genetic Instability	254
Preservation	254
Selection of Cell Line	254
Standardization of Medium and Serum	255
Cell Freezing	255
Thawing	260
Cell Banks	263
Transporting Cells	264

18 Quantitation and Experimental Design

Selection of Cell Line	267
Experimental Design	267
Growth Phase	268
Cell Counting	268
Hemocytometer	268
Electronic Particle Counting	270
Operation of Coulter Cell Counter (Model DI)	272
Cell Sizing	273
Stained Monolayers	273
Cell Weight	274
DNA Content	274
Hoechst 33258 Method	274
DAPI Method	274
Protein	275
Solubilization of Sample	275
Lowry Method	275
Bradford Method	276
Rates of Synthesis	276
Protein Synthesis	276
DNA Synthesis	277
Preparation of Samples for Enzyme Assay and Immunoassay	278
Replicate Sampling	278
Data Analysis	278
Growth Cycle	279
The Lag Phase	280
The Log Phase	281
The Plateau Phase	281
Plating Efficiency	282
Clonal Growth Assay by Dilution Cloning	282
Automatic Colony Counting	282
Labeling Index	282
Growth Fraction	285
Mitotic Index	285
Division Index	285
Cell Cycle Time (Generation Time)	286
Cytometry	286

19 Measurement of Viability and Cytotoxicity

Introduction	287
Limitations of <i>In Vitro</i> Methods	288
Nature of the Assay	288
Short-Term Assays—Viability	288
Long-Term Tests—Survival	290
Microtitration Assays	292
MTT-Based Cytotoxicity Assay	296
Metabolic Tests	299
Drug Interaction	299
Anticancer Drug Screening	299
Predictive Testing	299
Culture Systems	299
Mutagenicity	300
Mutagenesis, Selection of Mutants, and Estimation of Mutant Frequency	301
Principle of Detecting Mutants and Determining Mutant Frequency	301
Protocol for the L5178Y TK ⁺ /− Mouse Lymphoma Assay	301
Carcinogenicity	306
Inflammation	306

20 Culture of Specific Cell Types

Epithelial Cells	310
Epidermis	310
Corneal Epithelial Cells: Culture in Serum-Free Medium of Normal Human Corneal Cells and Cell Lines With Extended Life-Span	313
Breast	315
Cervix	316
Gastrointestinal Tract	318
Liver	320
Pancreas	322
Kidney	323
Bronchial and Tracheal Epithelium	325
Prostate	326
Mesenchymal Cells	327
Connective Tissue	327
Adipose Tissue	328
Muscle	328
Cartilage	331
Bone	332
Endothelium	333
Neuroectodermal Cells	335
Neurons	335
Glia	337
Endocrine Cells	341
Melanocytes	341
Hemopoietic Cells	344
Long-Term Bone Marrow Cultures	345
Gonads	348

Minimal Deviation Tumors	348
Teratomas	348

21 Culture of Tumor Tissue

Sampling	350
Disaggregation	351
Primary Culture	351
Characterization	351
Development of Cell Lines	352
Continuous Cell Lines	352
General Method	353
Selective Culture	353
Selective Media	353
Selective Substrates	354
Confluent Feeder Layers	354
Suspension Cloning	355
Histotypic Culture	355
Spheroids	355
Xenografts	356
Freezing	356

22 Three-Dimensional Culture Systems

Organ Culture	358
Gas and Nutrient Exchange	358
Structural Integrity	359
Growth and Differentiation	359
Limitations of Organ Culture	359
Types of Organ Culture	359
Histotypic Culture	362
Sponge Techniques	363
Hollow Fibers	363
Reaggregation and Spheroids	363
Filter Wells	365

23 Specialized Techniques

Mass Culture Techniques	369
Suspension Culture	369
Monolayer Culture	371
Lymphocyte Preparation	376
Blast Transformation	379
Autoradiography	379
Culture of Cells From Poikilotherms	383
Cell Synchrony	384
Cell Separation	384
Blockade	385
Time-Lapse Recording	385
Confocal Microscopy	387

Culture of Amniocytes	387
Somatic Cell Fusion	389
Selection of Hybrid Clones	391
Gene Transfer	391
Production of Monoclonal Antibodies	394
<i>In Situ</i> Molecular Hybridization	397
Applications and Recent Advances	401
Virus Preparation and Assay	402
In Conclusion	403
 <i>Reagent Appendix</i>	 405
<i>Trade Index</i>	411
<i>Sources of Materials</i>	411
<i>Addresses of Commercial Suppliers</i>	417
<i>Scientific Societies With Interests in Tissue Culture</i>	431
<i>Glossary</i>	433
<i>References</i>	437
<i>General Textbooks for Further Reading</i>	468
<i>Useful Journals</i>	468
<i>Index</i>	471
