
The Princeton Guide to Ecology

ASSOCIATE EDITORS Stephen R. Carpenter
University of Wisconsin–Madison

H. Charles J. Godfray
University of Oxford

Ann P. Kinzig
Arizona State University

Michel Loreau
McGill University

Jonathan B. Losos
Harvard University

Brian Walker
CSIRO Sustainable Ecosystems

David S. Wilcove
Princeton University

Simon A. Levin EDITOR
Princeton University

MANAGING EDITOR Christopher G. Morris

PRINCETON UNIVERSITY PRESS
Princeton & Oxford

Contents

<i>Preface</i>	vii	II.9 Ecological Epidemiology	220
<i>Contributors</i>	ix	II.10 Interactions between Plants and Herbivores	227
Part I Autecology	1	II.11 Mutualism and Symbiosis	233
I.1 Ecological Niche	3	II.12 Ecology of Microbial Populations	239
I.2 Physiological Ecology: Animals	14	II.13 Coevolution	247
I.3 Physiological Ecology: Plants	20		
I.4 Functional Morphology: Muscles, Elastic Mechanisms, and Animal Performance	27	Part III Communities and Ecosystems	253
I.5 Habitat Selection	38	III.1 Biodiversity: Concepts, Patterns, and Measurement	257
I.6 Dispersal	45	III.2 Competition, Neutrality, and Community Organization	264
I.7 Foraging Behavior	51	III.3 Predation and Community Organization	274
I.8 Social Behavior	59	III.4 Facilitation and the Organization of Plant Communities	282
I.9 Phenotypic Plasticity	65	III.5 Indirect Effects in Communities and Ecosystems: The Role of Trophic and Nontrophic Interactions	289
I.10 Life History	72	III.6 Top-Down and Bottom-Up Regulation of Communities	296
I.11 Remote Sensing and Geographic Information Systems	79	III.7 The Structure and Stability of Food Webs	305
I.12 Geographic Range	87	III.8 Spatial and Metacommunity Dynamics in Biodiversity	312
I.13 Adaptation	93	III.9 Ecosystem Productivity and Carbon Flows: Patterns across Ecosystems	320
I.14 Phenotypic Selection	101	III.10 Nutrient Cycling and Biogeochemistry	330
I.15 Population Genetics and Ecology	109	III.11 Terrestrial Carbon and Biogeochemical Cycles	340
I.16 Phylogenetics and Comparative Methods	117	III.12 Freshwater Carbon and Biogeochemical Cycles	347
I.17 Microevolution	126	III.13 The Marine Carbon Cycle	358
I.18 Ecological Speciation: Natural Selection and the Formation of New Species	134	III.14 Biodiversity and Ecosystem Functioning	367
I.19 Adaptive Radiation	143	III.15 Ecological Stoichiometry	376
Part II Population Ecology	153	III.16 Macroecological Perspectives on Communities and Ecosystems	386
II.1 Age-Structured and Stage-Structured Population Dynamics	155	III.17 Alternative Stable States and Regime Shifts in Ecosystems	395
II.2 Density Dependence and Single- Species Population Dynamics	166	III.18 Responses of Communities and Ecosystems to Global Changes	407
II.3 Biological Chaos and Complex Dynamics	172		
II.4 Metapopulations and Spatial Population Processes	177		
II.5 Competition and Coexistence in Plant Communities	186		
II.6 Competition and Coexistence in Animal Communities	196		
II.7 Predator–Prey Interactions	202		
II.8 Host–Parasitoid Interactions	213		

III.19 Evolution of Communities and Ecosystems	414	VI.5 Forests	606
Part IV Landscapes and the Biosphere	423	VI.6 Grasslands	614
IV.1 Landscape Dynamics	425	VI.7 Marine Ecosystem Services	619
IV.2 Landscape Pattern and Biodiversity	431	VI.8 Provisioning Services: A Focus on Fresh Water	625
IV.3 Ecological Dynamics in Fragmented Landscapes	438	VI.9 Regulating Services: A Focus on Disease Regulation	634
IV.4 Biodiversity Patterns in Managed and Natural Landscapes	445	VI.10 Support Services: A Focus on Genetic Diversity	642
IV.5 Boundary Dynamics in Landscapes	458	VI.11 The Economics of Ecosystem Services	652
IV.6 Spatial Patterns of Species Diversity in Terrestrial Environments	464	VI.12 Technological Substitution and Augmentation of Ecosystem Services	659
IV.7 Biosphere–Atmosphere Interactions in Landscapes	474	VI.13 Conservation of Ecosystem Services	670
IV.8 Seascape Patterns and Dynamics of Coral Reefs	482	Part VII Managing the Biosphere	679
IV.9 Seascape Microbial Ecology: Habitat Structure, Biodiversity, and Ecosystem Function	488	VII.1 Biological Control: Theory and Practice	683
IV.10 Spatial Dynamics of Marine Fisheries	501	VII.2 Fisheries Management	689
Part V Conservation Biology	511	VII.3 Wildlife Management	695
V.1 Causes and Consequences of Species Extinctions	514	VII.4 Managing the Global Water System	701
V.2 Population Viability Analysis	521	VII.5 Managing Nutrient Mobilization and Eutrophication	712
V.3 Principles of Reserve Design	529	VII.6 Managing Infectious Diseases	718
V.4 Building and Implementing Systems of Conservation Areas	538	VII.7 Agriculture, Land Use, and the Transformation of Planet Earth	724
V.5 Marine Conservation	548	VII.8 The Ecology, Economics, and Management of Alien Invasive Species	731
V.6 Conservation and Global Climate Change	557	VII.9 Ecological Economics: Principles of Economic Policy Design for Ecosystem Management	740
V.7 Restoration Ecology	566	VII.10 Governance and Institutions	748
Part VI Ecosystem Services	573	VII.11 Assessments: Linking Ecology to Policy	754
VI.1 Ecosystem Services: Issues of Scale and Trade-Offs	579	<i>Milestones in Ecology</i>	761
VI.2 Biodiversity, Ecosystem Functioning, and Ecosystem Services	584	<i>Glossary</i>	775
VI.3 Beyond Biodiversity: Other Aspects of Ecological Organization	591	<i>Index</i>	793
VI.4 Human-Dominated Systems: Agroecosystems	597
