Statistical Analysis of Designed Experiments

Third Edition

Springer

Contents

Preface to the Third Edition v

Preface vii

Introduction 1

1.1 Data. Variables, and Random Processes 1
1.2 Basic Principles of Experimental Design 3
1.3 Scaling of Variables 5
1.4 Measuring and Scaling in Statistical Medicine 7
1.5 Experimental Design in Biotechnology 8
1.6 Relative Importance of Effects—The Pareto Principle . . 9
1.7 An Alternative Chart 10
1.8 A One-Way Factorial Experiment by Example 15
1.9 Exercises and Questions 19

Comparison of Two Samples 21
2.1 Introduction 21
2.2 Paired {-Test and Matched-Pair Design 22
2.3 Comparison of Means in Independent Groups 25
2.3.1 Two-Sample it-Test 25
2.3.2 Testing $H_o : o'\ = a\% = a^2$ 25
2.3.3 Comparison of Means in the Case of Unequal Variances 26

2.3.4 Transformations of Data, to Assure Homogeneity of Variances . . . 27
2.3.5 Necessary Sample Size and Power of the Test . . 27
2.3.6 Comparison of Means without Prior Testing Ho : $a\backslash = a\backslash\backslash$ Cochran-Cox Test for Independent Groups . . . 27
2.4 Wilcoxon's Sign-Rank Test in the Matched-Pair Design 28
2.5 Rank Test for Homogeneity of WiJcoxon, Mann and Whitney . . . 33
2.6 Comparison of Two Groups with Categorical Response . 38
2.6.1 McNemar's Test and Matched-Pair Design . . . 38
2.6.2 Fisher's* Exact Test for Two Independent Groups . . . 40
2.7 Exercises and Questions . . . 42

The Linear Regression Model 45
3.1 Descriptive Linear Regression . . . 45
3.2 The Principle of Ordinary Least Squares . . . 47
3.3 Geometric Properties of Ordinary Least Squares Estimation . . . 50
3.4 Best Linear Unbiased Estimation . . . 51
3.4.1 Linear Estimators . . . 52
3.4.2 Mean Square Error . . . 53
3.4.3 Best Linear Unbiased Estimation . . . 55
3.4.4. Estimation of a^2 . . . 57
3.5 Multicollinearity . . . 60
3.5.1 Extreme Multicollinearity and Estimability . . . 60
3.5.2 Estimation within Extreme Multicollinearity . . 61
3.5.3 Weak Multicollinearity . . . 63
3.6 Classical Regression under Normal Errors . . . 67
3.7 Testing Linear Hypotheses . . . 69
3.8 Analysis of Variance and Goodness of Fit . . . 73
3.8.1 Bivariate Regression . . . 73
3.8.2 Multiple Regression . . . 79
3.9 The General Linear Regression Model . . . 84
3.9.1 Introduction . . . 84
3.9.2 Misspecification of the Covariance Matrix . . . 85
3.10 Diagnostic Tools . . . 87
3.10.1 Introduction . . . 87
3.10.2 Prediction Matrix . . . 87
3.10.3 Effect of a Single Observation on the Estimation of Parameters . . . 91
3.10.4 Diagnostic Plots for Testing the Model Assumptions . . . 96
3.10.5 Measures Based on the Confidence Ellipsoid . . . 97

.3.10.6' Partial Regression Plots 102
3.10.7 Regression Diagnostics by Animating Graphics V 105
3.11 Exercises and Questions 110

4 Single-Factor Experiments with Fixed and Random Effects 113
4.1 Models I and II in the Analysis of Variance 113
4.2 One-Way Classification for the Multiple Comparison of Means 115
4.2.1 Representation as a Restrictive Model 117
4.2.2 Decomposition of the Error Sum of Squares . . . 119
4.2.3 Estimation of CT^2 by MSEn-oi- 123
4.3 Comparison of Single Means 126
4.3.1 Linear Contrasts 126
4.3.2 Contrasts of the Total Response Values in the Balanced Case 129
4.4 Multiple Comparisons 134
4.4.1 Introduction 134
4.4.2 Experimentwise Comparisons 135
4.4.3 Select Pairwise Comparisons 137
4.5 Regression Analysis of Variance 144
4.6 One-Factorial Models with Random Effects 147
4.7 Rank Analysis of Variance in the Completely Randomized Design 151
4.7.1 Kruskal-Wallis Test 151
4.7.2 Multiple Comparisons 154
4.8 Exercises and Questions 156

5 **More** Restrictive Designs 159
5.1 Randomized Block Design 159
5.2 Latin Squares 168
5.2.1 Analysis of Variance 169
5.3 Rank Variance Analysis in the Randomized Block Design 175
5.3.1 Friedman Test 175
5.3.2 Multiple Comparisons 177
5.4 Exercises and Questions 179

6 Incomplete Block Designs 181
6.1 Introduction 181
6.2 General Theory of Incomplete Block Designs 183
6.3 Intrablock Analysis of Incomplete Block Design 185
6.3.1 Model and Normal Equations 185
6.3.2 Covariance Matrices of Adjusted Treatment and Block Totals 188

6.3.3 Decomposition of Sum of Squares and Analysis of Variance 189
6.4 Interblock Analysis of Incomplete Block Design 193
6.4.1 Model and Normal Equations 195
6.4.2 Use of Intrablock and Interblock Estimates . . . 197
6.5 Balanced Incomplete Block Design 201
6.5.1 Interpretation of Conditions of BIBD 202
6.5.2 Intrablock Analysis of BIBD 204
6.5.3 Interblock Analysis and Recovery of Interblock Information in BIBD 211
6.6 Partially Balanced Incomplete Block Designs 219
6.6.1 Partially Balanced Association Schemes 220
6.6.2 General Theory of PBIBD 229
6.6.3 Conditions for PBIBD 230
6.6.4 Interpretations of Conditions of BIBD 230
6.6.5 Intrablock Analysis of PBIBD With Two Associates 231
6.7 Exercises and Questions 241

7 Multifactor Experiments 245
7.1 Elementary Definitions and Principles 245
7.2 Two-Factor Experiments (Fixed Effects) 249
7.3 Two-Factor Experiments in Effect Coding 254
7.4 Two-Factorial Experiment with Block Effects 263
7.5 Two-Factorial Model with Fixed Effects—Confidence Intervals and Elementary Tests 266
7.6 Two-Factorial Model with Random or Mixed Effects . . 270
7.6.1 Model with Random Effects 270
7.6.2 Mixed Model 274
7.7 Three-Factorial Designs 278
7.8 Split-Plot Design 283
7.9 2^{fc} Factorial Design 287
7.9.1 The 2^2 Design 288
7.9.2 The 2^3 Design 290
7.10 Confounding 294
7.11 Analysis of Variance in Case of Confounded Effects . . . 303
7.12 Partial Confounding 304
7.13 Fractional Replications 316
7.14 Exercises and Questions 322

8 Models for Categorical Response Variables 329
8.1 Generalized Linear Models 329
8.1.1 Extension of the Regression Model 329
8.1.2 Structure of the Generalized Linear Model 331
8.1.3 Score Function and Information Matrix 334

8.1.4 Maximum Likelihood Estimation 335
8.1.5 Testing of Hypotheses and Goodness of Fit . . . 338
8.1.6 Overdispersion 339
8.1.7 Quasi Loglikelihood 341
8.2 Contingency Tables 343
8.2.1 Overview 343
8.2.2 Ways of Comparing Proportions 344
8.2.3 Sampling in Two-Way Contingency Tables . . . 347
8.2.4 Likelihood Function and Maximum Likelihood Estimates 348
8.2.5 Testing the Goodness of Fit 350
8.3 Generalized Linear Model for Binary Response 353
8.3.1 Logit Models and Logistic Regression 353
8.3.2 Testing the Model 355
8.3.3 Distribution Function as a Link Function 356
8.4 Logit Models for Categorical Data 357
8.5 Goodness of Fit—Likelihood Ratio Test 358
8.6 Loglinear Models for Categorical Variables 359
8.6.1 Two-Way Contingency Tables 359
8.6.2 Three-Way Contingency Tables 362
8.7 The Special Case of Binary Response 365
8.8 Coding of Categorical Explanatory Variables 368
8.8.1 Dummy and Effect Coding 368
8.8.2 Coding of Response Models 372
8.8.3 Coding of Models for the Hazard Rate 372
8.9 Extensions to Dependent Binary Variables 375
8.9.1 Overview 376
8.9.2 Modeling Approaches for Correlated Response . 377
8.9.3 Quasi-Likelihood Approach for Correlated Binary Response 378
8.9.4 The Generalized Estimating Equation Method by Liang and Zeger 379
8.9.5 Properties of the Generalized Estimating Equation Estimate *J3Q* 381
8.9.6 Efficiency of the Generalized Estimating Equation and Independence Estimating Equation Methods 383
8.9.7 Choice of the Quasi-Correlation Matrix i?-i(a:) . 383
8.9.8 Bivariate Binary Correlated Response Variables . 384
8.9.9 The Generalized Estimating Equation Method . 385
8.9.10 The Independence Estimating Equation Method 386
8.9.11 An Example from the Field of Dentistry 387
8.9.12 Full Likelihood Approach for Marginal Models . 392
8.10 Exercises and Questions 392

9 Repeated Measures Model • 395
9.1 The Fundamental Model for One Population 395
9.2 The Repeated Measures Model for Two Populations . . . 398
9.3 Univariate and Multivariate Analysis 401
9.3.1 The Univariate One-Sample Case 401
9.3.2 The Multivariate One-Sample Case 401
9.4 The Univariate Two-Sample Case 406
9.5 The Multivariate Two-Sample Case 407
9.6 Testing of H_o : L_x = £,7 407
9.7 Univariate Analysis of Variance in the Repeated . Measures Model 409
9.7.1 Testing of Hypotheses in the Case of Compound Symmetry 409
9.7.2 Testing of Hypotheses in the Case of Sphericity 411
9.7.3 Trie Problem of Nonsphericity 415
9.7.4 Application of Univariate Modified Approaches in the Case of Nonsphericity 416
9.7.5 Multiple Tests 417
9.7.6 Examples 418
9.8 Multivariate Rank Tests in the Repeated Measures Model 424
9.9 Categorical Regression for the Repeated Binary Response Data 429
9.9.1 Logit Models for the Repeated Binary Response for the Comparison of Therapies 429
9.9.2 First-Oider Markov Chain Models 430
9.9.3 Multinomial Sampling and Loglinear Models for a Global Comparison of Therapies . . 432
9.10 Exercises and Questions 439

10 Cross-Over Design 441
10.1 Introduction 441
10.2 Linear Model and Notations 442
10.3 2 x 2 Cross-Over (Classical Approach) 443
10.3.1 Analysis Using i-Tests 444
10.3.2 Analysis of Variance 449
10.3.3 Residual Analysis and Plotting the Data 453
10.3.4 Alternative Parametrizations in 2 x 2 Cross-Over 457
10.3.5 Cross-Over Analysis Using Rank Tests 468
10.4 2 x 2 Cross-Over and Categorical (Binary) Response . . '468
10.4.1 Introduction 468
10.4.2 Loglinear and Logit Models 473
10.5 Exercises and Questions 485

11 Statistical Analysis of Incomplete Data 487
11.1 Introduction . . . 487
11.2 Missing Data in'the Response . . . 492
11.2.1 Least Squares Analysis for Complete Data' . . . 492
11.2.2 Least Squares Analysis for Filled-Up Data . . . 493
11.2.3 Analysis of Covariance—Bartlett's Method . . . 494
11.3 Missing Values in the A'-Matrix . . . 495
11.3.1 Missing Values and Loss of Efficiency . . . 497
11.3.2 Standard Methods for Incomplete A'-Matrices . 499
11.4 Adjusting for Missing Data in 2 x 2 Cross-Over Designs 502
11.4.1- Notation . . . 502
11.4.2 Maximum Likelihood Estimator (Rao. 1956) . . 504
11.4.3 Test Procedures . . . 505
11.5 Missing Categorical Data . . . 510
11.5.1 Introduction . . . 510
11.5.2 Maximum' Likelihood Estimation in the Complete Data Case . . . 511
11.5.3 Ad-Hoc Methods . . . 511
11.5.4 Model-Based Methods . . . 512
11.6 Exercises and Questions . . . 515

A Matrix Algebra . 517
A.I Introduction . . . 517
A.2 Trace of a Matrix . . . 520
A.3 Determinant of a Matrix . . . 520
A.4 Inverse of a Matrix . . . 522
A.5 Orthogonal Matrices . . . 523
A.6 Rank of a Matrix . . . 524
A.7 Range and Null Space . . . 524
A.S Eigenvalues and Eigenvectors . . . 525
A.9 Decomposition of Matrices . . . 527
A.10 Definite Matrices and Quadratic Forms . . . 530
A.11 Jdempotent Matrices . . . 536
A. 12 Generalized Inverse . . . 537
A.13 Projections . . . 545
A.14 Functions of Normally Distributed Variables . . . 546
A. 15 Differentiation of Scalar Functions of Matrices . . . 549
A.16 Miscellaneous Results, Stochastic Convergence . . . 552

B Theoretical Proofs 555
B.I The Linear Regression Model . . . 555
B.2 Single-Factor Experiments with Fixed an'd Random Effects . . . 578
B.3 Incomplete Block Designs . . . 581

C Distributions and Tables 591
