

Willi Gujer

Systems Analysis for Water Technology

 Springer

Content

1	Introduction.....	1
1.1	Goal and Content of This Text	1
2	Modeling and Simulation	5
2.1	System, Model, Simulation	5
2.2	Models in Natural and Engineering Sciences	6
2.3	Types of Mathematical Models	6
2.4	Systems Analysis.....	8
2.5	Calibration, Validation, and Verification	10
2.6	Model Structure	11
2.7	Simulation	12
2.8	Components of a Model	13
2.8.1	Structural Components of a Mathematical Model	13
2.8.2	Case Study	19
2.9	Dimensions and Units.....	21
3	System Boundaries and Material Balances	23
3.1	System Definition.....	23
3.2	System Boundaries	25
3.3	General Balance Equation	26
3.3.1	Inventory and Accumulation.....	26
3.3.2	Transport Processes.....	27
3.3.3	Reaction, Production, and Consumption.....	29
3.3.4	Mathematical Form of the Balance Equation.....	30
3.4	Special Cases of the Material Balance Equation	33
3.4.1	Stationary Balance or the Steady State	33
3.4.2	Closed Systems	35
3.4.3	Conservative Material	37
3.5	Summary	39

4	Transport Processes	41
4.1	Characterization of Transport Processes	42
4.2	Modeling of Transport Processes	43
4.2.1	Advection	43
4.2.2	Sedimentation	45
4.2.3	Random Walk	48
4.2.4	Molecular Diffusion	53
4.2.5	Turbulent Diffusion	58
4.2.6	Dispersion	62
4.2.7	Numeric Dispersion	68
4.2.8	Convection	70
4.2.9	Mass Transfer Coefficients	72
5	Transformation Processes	77
5.1	Case Study	77
5.2	Transformation Written in Conventional Form	78
5.3	Stoichiometric Matrix	80
5.4	Kinetics	84
5.4.1	Temperature Effects	86
5.5	State Variables	87
5.6	Composition of Materials	90
5.7	Conservation Laws	92
5.7.1	Conservation Law for Several Processes	95
5.7.2	Charge Balance	95
5.7.3	Theoretical Oxygen Demand	97
5.8	Summary	100
6	Ideal Reactors	101
6.1	Overview of Ideal Reactors	101
6.2	The Batch Reactor	102
6.3	The Continuous Flow Stirred Tank Reactor (CSTR)	105
6.4	A Cascade of Stirred Tank Reactors	108
6.5	The Plug-Flow Reactor	111
6.6	Plug-Flow Reactor with Turbulence	114
6.7	Sequencing Batch Reactor	123
6.8	Completely Mixed or Plug-Flow Reactor?	127
6.9	Summary	127
7	Hydraulic Residence Time Distribution	129
7.1	RTD: A Spectrum of Retention Times	130
7.2	Characterization of Residence Time Distributions	133
7.3	Experimental Determination of an RTD	134
7.3.1	Tracer Substances	134
7.3.2	Experimental Procedure	135

7.4	Residence Time Distributions of Ideal Reactors	143
7.4.1	RTD of a Stirred Tank Reactor (CSTR).....	143
7.4.2	Cascade of Stirred Tank Reactors	145
7.4.3	Plug-Flow Reactor	148
7.4.4	Plug-Flow Reactor with Turbulence	150
7.4.5	Numeric Simulation of Turbulence in a Plug-Flow Reactor	155
7.5	Reactor Combinations	159
7.6	RTD with Stochastic Models.....	159
7.6.1	Stochastic Model of a Cascade of Stirred Tank Reactors	160
7.6.2	Stochastic Model of Turbulence	161
8	Modeling of Real Reactors	165
8.1	Goal	165
8.2	Time of Mixing.....	166
8.3	Methods for Model Identification.....	168
8.3.1	Method of Moments.....	168
8.3.2	Adjustment of the Model to the Measurements	170
8.4	Case Study	171
9	Heterogeneous Systems	179
9.1	Classification of Processes and Systems	179
9.2	Multiphase Systems.....	180
9.2.1	Microbial Degradation of Stored Pollutants.....	181
9.3	Behavior of Individual Particles	182
9.4	Case Studies	184
9.4.1	Transformation Processes in a Sewer.....	184
9.4.2	Activated Sludge Flocs	187
9.4.3	Self-purification in a Brook	189
9.4.4	Gas Exchange in a Stirred Tank Reactor	195
9.4.5	Adsorption in an Activated Carbon Column.....	202
10	Dynamic Behavior of Reactors	211
10.1	Causes of the Dynamics	212
10.2	Adjustment to Step Changes in Load	214
10.3	Periodic Load Variation.....	217
10.3.1	Stirred Tank Reactor	217
10.3.2	Cascade of Stirred Tank Reactors	221
10.3.3	Plug-Flow Reactor	222
10.3.4	Bode Diagram	222
10.3.5	Stochastic Processes.....	226
10.3.6	Dynamic Operation of Plants	226

of Time Constants	229
Residence Time of Individual Materials	229
Different Time Constants	232
Effluent in Sewers	234
Measurement Uncertainty	237
from Descriptive Statistics	237
Statistical Characterization of the Distribution	
Measured Values	238
Empirical Characterization of Measured Values	239
Systems	241
Uncertainty	243
Measurement Errors	243
Random Measurement Error	245
Systematic Measurement Errors, Bias	248
Example: COD Measurement (Standard Curve)	250
Random Error Model	251
Systematic Measurement Errors	253
Model Identification, Sensitivity and Error Propagation	257
Identification	257
Theoretical Principles, Chi Square, χ^2	258
Example: First-Order Reaction	
Batch Reactor	261
Results of an Extended Case Study	263
Parameter Identifiability	266
Case Study	266
Local Sensitivity Functions	269
Structure	274
Structural Model Deviations	275
Simple Test Procedures	277
Uncertainty	281
Theoretical Background	282
Application to the Case Study	288
Error Propagation	291
Statistics	291
Application to the Case Study	294
Error Propagation	296
Monte Carlo Simulation	296
Sampling Methods	300
Application to the Case Study	308
Parameter Values: A Word of Caution	311
Model Identification	312

13	Process Control Engineering	315
13.1	Examples of Operating Strategies	315
13.1.1	Adjusting the Water Temperature of a Shower.....	316
13.1.2	Operation of an Activated Sludge System	316
13.1.3	Summary	317
13.2	Control Path and Control Loop	318
13.3	Step Response of a Subsystem	321
13.4	Step Response of a Controlled System	326
13.4.1	Controlled Systems Without Delay	326
13.4.2	Controlled Systems with Delay.....	327
13.4.3	Controlled Systems with Dead Time	330
13.5	Characteristic Curves of a Controlled System	331
13.6	The Standard Automatic Controller.....	332
13.6.1	The Two-Position Controller (A Discontinuous Controller).....	333
13.6.2	Continuous Automatic Controllers	335
13.6.3	Comparison of the Standard Controllers.....	344
13.6.4	Implementation of a PID Controller in Berkeley Madonna	344
13.6.5	Disturbance Variable Compensation.....	345
13.6.6	Optimal Adjustment of a PID Controller	346
13.7	Case Study: Control of Oxygenation in an Activated Sludge Plant	348
13.7.1	Task.....	348
13.7.2	System Performance Without Control	350
13.7.3	Parameters of a PID Controller	350
13.8	Fuzzy controllers	355
13.8.1	Example of a Fuzzy Controller	356
13.8.2	Why Fuzzy Control?	359
14	Time Series Analysis.....	361
14.1	Time Series.....	361
14.2	Stationary Time Series.....	362
14.3	Case study: Yearly Variation of the Temperature	363
14.4	Conventional Statistical Characterization.....	364
14.5	Moving Average.....	365
14.5.1	Arithmetic Moving Average	366
14.5.2	Geometric Moving Average.....	367
14.6	Trend Lines.....	370
14.7	Removing a Trend	372
14.7.1	Correcting for the Average Value	373
14.8	Logistic Growth.....	374
14.9	Discrete Fourier Transformation	375

14.10	Autocorrelation, AR(1) Model	378
14.10.1	Autoregressive Models	379
14.10.2	Summary on AR(1) models	384
14.10.3	Identification of an AR(1) model	385
14.11	Case study.....	388
14.11.1	Task, Question	388
14.11.2	Procedure	388
14.11.3	Trend Line.....	389
14.11.4	Fourier Transformation	389
14.11.5	Analysis of the Residuals: AR(1) Model	391
14.11.6	Synthesis	393
15	Design under Uncertainty	397
15.1	Dealing with Uncertainty.....	397
15.2	Variation and Uncertainty	399
15.3	Case Study.....	403
15.3.1	Task.....	403
15.3.2	Variation	405
15.3.3	Uncertainty.....	406
15.3.4	Representation of Variation and Uncertainty	407
15.3.5	Deterministic Design.....	410
15.3.6	Uncertainty-Based Design	414
15.3.7	Operational Experience and Retrofitting of the Plant	418
15.3.8	Critique of the Design Procedures	419
15.4	Second-Order Uncertainty	420
16	Problems	423
16.1	Composition Matrix and Conservation Equation	423
16.2	Conservation of TOD	424
16.3	Breakpoint Chlorination: Stoichiometry and Composition	424
16.4	Deriving a Stoichiometric Matrix.....	425
16.5	Mass Balance in the Steady State	425
16.6	Ideal Reactors, Chemostats.....	426
16.7	Ideal Reactors, Plug Flow.....	427
16.8	Ideal Reactors, Sampling in Turbulent Flow	428
16.9	Ideal Reactors, Disinfection	429
16.10	Ideal Reactors, SBR.....	430
16.11	Residence Time Distribution, Cascade of CSTRs	430
16.12	RTD, Reactor Model	431
16.13	RTD, Activated Sludge Tank	432
16.14	RTD, Flow Rate and Dispersion in a Sewer.....	433
16.15	Modeling a Sewer.....	434
16.16	RTD, Disinfection Reactor	434
16.17	RTD, Additivity of τ_m and σ^2	434
16.18	RTD, Turbulent Plug-Flow Reactor	434

16.19	Heterogeneous Systems: Filtration	435
16.20	Substrate Profiles in a Biofilm	435
16.21	Bode Diagram	437
16.22	Dynamic Nitrification	437
16.23	Nonstationary Flow in Sewers	438
16.24	Stochastic Measurement Error	439
16.25	Systematic Measurement Error	441
16.26	Sensitivity and Parameter Identification	442
16.27	Sensitivity	443
16.28	Error Propagation with Correlated Uncertainty	443
16.29	System Identification	444
16.30	Uncertainty, Error Propagation	447
16.31	Process Control, Two-Position Controller	447
16.32	Process Control, PID Controller	448
16.33	Time Series Analysis	449
16.34	Design under Uncertainty, Nitrification	450
16.35	Integrated Problem: Nitrification in an RBC	452
16.36	Integrated Problem: Analyzing a Fish Pond	455
