

Exploring the Vertebrate Central Cholinergic Nervous System

Alexander G. Karczmar, MD

With contributions by

Neelima Chauhan, PhD

Arthur Christopoulos, Bpharm, PhD

Jon Lindstrom, PhD

George J. Siegel, MD

With a Foreword by Victor P. Whittaker, PhD

Contents

Foreword by <i>Victor P. Whittaker</i>	v
Preface and Acknowledgments	vii
Contributors	xiii
1. Introduction: History and Scope of This Book	
A. Why a Book on the Central Cholinergic System?	1
B. Outline of the History of Central Cholinergic System Research	7
C. Scope of This Book	24
D. Envoi	26
Notes	26
References	26
2. Cholinergic Cells and Pathways	
A. History of Methodological Development Needed to Define the Cholinergic Neuron, Explain Acetylcholine Release, and Establish Central Cholinergic Pathways	33
B. Morphology and Cytoanatomy, and Markers of Central Cholinergic Neurons ..	42
C. Classical and Unorthodox Hypotheses of Acetylcholine Release	49
DI. Central Cholinergic Pathways—An Introduction	55
DII. The Cholinergic Pathways Presented by the McGeers, Kimura, and Kasa and Expanded by Butcher, Woolf, and Wainer	55
DIII. Cholinergic Pathways as Defined by Marsel Mesulam, His Associates, and Other Recent Investigators	65
DIV. Conclusions	68
Notes	69
References	69
3. Metabolism of Acetylcholine: Synthesis and Turnover	
A. Historical Introduction	81
B. ACh Synthesis	83
CI. Choline Metabolism	90
CII. Choline Metabolism and Choline Transport into the Brain	90
CIII. Choline and Phosphatidylcholine as Precursors of Acetylcholine and Phospholipids	96

CIV. Choline Transport and Uptake	100
DI. Cholinesterases	109
DII. Structures, Active Sites, and Mechanism of Action	114
DIII. Distribution and Roles of Cholinesterases	124
Notes	131
References	131

4. History of Research on Nicotinic and Muscarinic Cholinergic Receptors

Alexander G. Karczmar, Jon Lindstrom, and Arthur Christopoulos

A. Curare, Muscarine, Enzymes, and Bacteria	151
B. Receptors and the Demonstration of Cholinergic Transmission	154
C. The "Abstract" Phase of the Receptor Research	154
D. The Reality of the Receptors	156
E. Receptor Subtypes	157
F. Brief Conclusions	158
Notes	158
References	159

5. Muscarinic Acetylcholine Receptors in the Central Nervous System: Structure, Function, and Pharmacology

Arthur Christopoulos

A. Introduction	163
B. Pharmacological Classification	163
C. Localization and Distribution	173
D. Molecular Biology	175
E. Signaling Pathways	183
F. Functional Insights Gained from the Use of Muscarinic Acetylcholine Receptor Knockout Mice	190
G. Conclusions	193
Acknowledgments	193
References	193

6. Neuronal Nicotinic Receptors: History, Structure, and Functional Roles

Jon Lindstrom

A. Scope of the Chapter	209
B. Structures of Nicotinic Acetylcholine Receptors	211
C. Functional Roles of Nicotinic Receptors	221
References	228

7. Anticholinesterases and War Gases

A. Historical Introduction	237
BI. Classification, Chemical Structures, Structure-Activity Relationships, and Bonding Relationships of Anticholinesterases	246
BII. Organophosphorus Compounds, Their Structure-Activity Relationships, and Bonding	257

BIII. Anticholinesterases Other Than Organophosphorus, Carbamate, and Related Anticholinesterases	265
C. Metabolism and Detoxification of Anticholinesterases	267
DI. Toxic Effects of Anticholinesterases	272
DII. Toxic Effects Involving the US 1991 War Effort in the Persian Gulf	285
E. Treatment of Anticholinesterase Poisoning	288
F. Cholinergic Teratology	290
Notes	291
References	292

8. Cholinergic Aspects of Growth and Development

A. Historical Introduction	311
BI. Cholinergic Ontogeny: Precocious Developmental Appearance of the Components of the Cholinergic System	314
BII. Development of the Cholinergic System During Neurogenesis and Organogenesis	319
BIII. Postnatal Neurogenesis	335
BIV. Comments and Conclusions as to Cholinergic Ontogeny	338
BV. Phylogenesis of the Cholinergic System	339
C. Trophic and Growth Factors	340
CI. Nerve Growth Factor	341
CII. Other Retrophic Factors	361
CIII. Anterograde-Acting Factors and Related Phenomena	370
D. Teratologic and Ontogenetic Effects of Cholinergic Components and Cholinergic Agents	377
Notes	380
References	381

9. Central Cholinergic Nervous System and Its Correlates

A. Scope of This Chapter and Historical Introduction	411
BI. Cholinoceptive Responses	426
BII. Central Release of Acetylcholine	437
BIII. Pharmacology of Central Cholinergic and Cholinomimetic Responses	440
BIV. Functional Aspects of the Cholinergic System	455
BV. Mental and Behavioral Functions with Cholinergic Implications	491
BVI. Cholinergic Aspects of Organism-Environment Interaction—and Beyond	523
Notes	529
References	530

10. Links between Amyloid and Tau Biology in Alzheimer's Disease and Their Cholinergic Aspects

George S. Siegel, Neelima Chauhan, and Alexander G. Karczmar

A. Historical Introduction	597
B. Dysregulated Processing of Neurocellular Proteins	602
C. Amyloid	605
D. Amyloid Precursor Protein	608

E.	α -Secretase	614
F.	β -Secretase	615
G.	γ -Secretase	616
H.	Learning and Memory: Effects of Amyloid and Mutations of APP and PS1 ..	618
I.	Tau Biology	618
J.	Potential Regulatory Interactions in the Pathogenesis of Alzheimer's Disease	622
K.	Therapy of Alzheimer's Disease and Future Directions	631
	Notes	638
	References	638

11. Envoi

A.	Immediate, Mundane Concerns	657
B.	The "Far Beyond" Matters	662
C.	The Last Word	664
	Notes	664
	References	665
	Index	667
