

Lecture Notes in Computer Science

Edited by G. Goos and J. Hartmanis

184

Local Area Networks: An Advanced Course

Glasgow, July 11–22, 1983
Proceedings

FB Mathematik TUD

58285951

Edited by

D. Hutchison, J. A. Mariani and W.D. Shepherd

Fachbereich Mathematik
Technische Hochschule Darmstadt
Bibliothek

Inv.-Nr. 3 20 371

Springer-Verlag
Berlin Heidelberg New York Tokyo

List of Contents

1. The Ethernet	
J. F. Shoch, Y. K. Dalal, D. D. Redell and R. C. Crane	1
1. Introduction	2
2. General Description of Ethernet-Class Systems	4
3. Transmission System Design	13
4. Controller Design	16
5. CSMA/CD Channel Management	22
6. Controller-to-Station Interface Design	27
7. Summary and Conclusions	30
8. Acknowledgements	32
9. References	33
2. The Token Ring	
W. Bux, F. Closs, K. Kuemmerle, H. Keller and H. R. Mueller	36
1. Introduction	37
2. Token Access Protocol	38
3. Ring Wiring	51
4. The Transmission System	52
5. Performance Characteristic	57
6. Conclusions	59
Acknowledgement	61
References	62
3. The Cambridge Ring	
R. Banerjee and W. D. Shepherd	64
1. Introduction	65
2. Ring Organisation	65
3. Station Organisation	67
4. Ring Maintenance and Error Recovery	72
5. Hardware	73
6. Higher Level Protocols	74
7. The Cambridge Distributed Computing System	81
8. Future Developments	83
9. References	84
4. Access Units	
D. Hutchison	87
1. Introduction	88
2. LAN Structures	89
3. Access Units	93
4. Types of Device	96
5. Access Logic	98

6. Transport Box	101
7. Conclusion	104
8. References	104
5. Performance Issues	
W. Bux	108
1. Introduction	109
2. Delay-Throughput Characteristics of Medium Access Protocols	110
3. End-to-end Flow and Error Control	134
4. Local-Area Network Adapter Design	145
Acknowledgement	154
References	155
6. Communications Protocols	
F. Panzieri	162
1. Introduction and Design Issues	163
2. Protocol Architectures	167
3. The Cambridge Ring Packet Level Protocol	177
4. The Cambridge Ring Remote Procedure Call Protocol	180
5. The Cambridge Ring Byte Stream Protocol and Transport Service Byte Stream Protocol	192
6. Interfacing UNIX to Computer Networks	198
7. Conclusions	215
Acknowledgements	216
References	216
7. File Servers	
J. G. Mitchell	221
1. Introduction	222
2. The Client's View of a File Server	224
3. The Designer's and Implementor's View of File Services	248
Acknowledgements	253
Appendix A: Details of Existing Network-Based File Servers	254
References	258
8. Protection	
R. M. Needham	260
1. Introduction	261
2. Protection	263
3. The Limits of Self-Defence	272
4. Discussion	273
5. Encryption and its Use in Networks	274
6. References	281
9. The Cambridge Distributed Computing System	
A. J. Herbert	282
1. Introduction	283
2. Processor Bank Services	292

3. Applications of the Processor Bank	302
4. The Small Servers	305
5. Bibliography	312
 10. Network Operating Systems	
R. F. Rashid	313
1. Overview	314
2. Accent: the SPICE NOS Kernel	328
3. The SPICE NOS System Layer	340
4. The NOS as Viewed by the User Programmer	352
5. Performance Issues	354
6. Looking Ahead	356
References	358
 11. Synchronization	
G. Le Lann	361
1. Introduction	362
2. Consistency and Atomicity	362
3. Event Ordering and Atomicity	364
4. Synchronization	366
5. Synchronization and Types of Computing Systems	369
6. Event Ordering – Examples	371
7. Synchronization Mechanisms for Distributed Systems	374
8. Evaluation Criteria	390
9. References	393
 12. LAN Internetworking	
W. D. Shepherd	396
1. Introduction	397
2. High Performance Gateways	398
3. An Internetwork Architecture	409
4. Other Methods of Linking LANs	418
5. Conclusion	424
6. Acknowledgements	425
7. References	425
 13. Wide Area Internetworking	
P. L. Higginson	428
1. Introduction	429
2. The Differences	430
3. Wide Area Network Standards	432
4. The DARPA Concatenated Networks	434
5. The Protocol Conversion Alternative	439
6. Naming and Addressing	444
7. Future Standardisation	451
8. Conclusions	452
Acknowledgements	453
References and Bibliography	454

14. Real-time Protocols

G. Le Lann	457
1. Introduction	458
2. Presentation of the Problem	459
3. A Deterministic Protocol Based on a Unilateral Interference Detection Channel	461
4. A Deterministic Protocol Based on Multiple Contention Channels	463
5. Conclusion	468
References	469

15. Specification in Distributed Systems

G. v. Bochmann	470
1. The role of Specification in the Design of Distributed Systems	471
2. Introduction to a Specification Language – with Examples	478
3. Further Reading	495
Acknowledgements	495
References	496
