Contents

1	Introduction	1
2	The model	4
2.1	The baseline model	4
2.2	Reformulation according to the recursive saddlepoint method	6
2.3	Optimal policy and dynamics	7
3	Interpretation of model uncertainty in our framework	9
4	Examples	11
4.1	An estimated backward looking model	11
4.2	An estimated forward looking model	14
5	Arbitrary time-varying instrument rules and instrument paths	19
5.1	Setup	19
5.2	Optimization	23
6	Arbitrary time-invariant instrument rules and optimal restricted instrument rules	23
6.1	Setup	24
6.2	Optimization	24
6.3	Optimal Taylor-type instrument rules in a forward looking model	25
7	Unobservable modes	27
7.1	Optimal policy	28
7.2	Examples	29
8	Conclusions	32
	Appendix	35
A	Incorporating central-bank judgment	35
B	An algorithm for the value function and optimal policy function	36
C	A unit discount factor	39
D	Mean square stability	40
E	Alternative models with different predetermined and forward-looking variables	41
F	Details of the estimation	43
G	Details for arbitrary time-varying instrument rules	44
H	Details for arbitrary time-invariant instrument rules	45

I	Details with unobservable modes	48
I.1	Unobservable modes and forward-looking variables	48
I.2	An algorithm for the model with forward looking variables	51
I.3	Unobservable modes without forward looking variables	53
I.4	An algorithm for the backward-looking model	54
J	Optimization under discretion	55
