CONTENTS

Preface	xxi
Introduction	1

Part 1 Single-Equation Regression Models

1	The Nature of Regression Analysis	15
1.1	Historical Origin of the Term "Regression"	15
1.2	The Modern Interpretation of Regression Examples	16
1.3	Statistical vs. Deterministic Relationships	19
1.4	Regression vs. Causation	20
1.5	Regression vs. Correlation	21
1.6	Terminology and Notation	22
1.7	The Nature and Sources of Data for Econometric Analysis	23
	Types of Data	23
	The Sources of Data	24
	The Accuracy of Data	26
1.8	Summary and Conclusions	27
	Exercises	28
	Appendix 1A	29
	1 A. 1 Sources of Economic Data	29
	1 A.2 Sources of Financial Data	31
2	Two-Variable Regression Analysis: Some Basic Ideas	32
2.1	A Hypothetical Example	32
2.2	The Concept of Population Regression Function (PRF)	36
2.3	The Meaning of the Term "Linear" Linearity in the Variables	36
	Linearity in the Parameters	37
2.4	Stochastic Specification of PRF	38

2.5	The Significance of the Stochastic Disturbance Term	39
2.6	The Sample Regression Function (SRF)	41
2.7	Summary and Conclusions	45
	Exercises	45

Two-Variable Regression Model:

	The Problem of Estimation	52
3.1	The Method of Ordinary Least Squares	52
3.2	The Classical Linear Regression Model: The Assumptions Underlying the Method of Least Squares	59
	How Realistic Are These Assumptions?	68
3.3	Precision or Standard Errors of Least-Squares Estimates	69
3.4	Properties of Least-Squares Estimators: The Gauss-Markov Theorem	72
3.5	The Coefficient of Determination r^2 : A Measure of "Goodness of Fit"	74
3.6	A Numerical Example	80
3.7	Illustrative Examples	83
	Coffee Consumption in the United States, 1970-1980	83
	Keynesian Consumption Function for the United States, 1980-1991	84
3.8	Computer Output for the Coffee Demand Function	85
3.9	A Note on Monte Carlo Experiments	85
3.10	Summary and Conclusions	86
	Exercises	87
	Questions	87
	Problems	89
	Appendix 3A	94
3A.1	Derivation of Least-Squares Estimates	94
3A.2	Linearity and Unbiasedness Properties of Least-Squares Estimators	94
3 A. 3	Variances and Standard Errors of Least-Squares Estimators	95
3A.4	Covariance between $\hat{\beta}_i$ and $\hat{\beta}_j$	96
3A.5	The Least-Squares Estimator of β_j	96
3A.6	Minimum-Variance Property of Least-Squares Estimators	97
3A.7	SAS Output of the Coffee Demand Function (3.7.1)	99

The Normality Assumption: Classical Normal Linear Regression Model (CNLRM)

	Linear Regression Model (CNLRM)	101
4.1	The Probability Distribution of Disturbances M ,	101
4.2	The Normality Assumption	102
4.3	Properties of OLS Estimators under the Normality Assumption	104
4.4	The Method of Maximum Likelihood (ML)	107
4.5	Probability Distributions Related to the Normal Distribution: The t , Chi-square (χ^2) and F Distributions	107

4.6	Summary and Conclusions	109
	Appendix 4A	110
	Maximum Likelihood Estimation of Two-Variable Regression Model	110
	Maximum Likelihood Estimation of the Consumption-Income Example	113
	Appendix 4A Exercises	113
Two-Variable Regression: Interval Estimation and Hypothesis Testing		115
5.1	Statistical Prerequisites	115
5.2	Interval Estimation: Some Basic Ideas	116
5.3	Confidence Intervals for Regression Coefficients β_1 and β_2	117
	Confidence Interval for β_2	117
	Confidence Interval for β_1	119
	Confidence Interval for β_1 and β_2 Simultaneously	120
5.4	Confidence Interval for a^2	120
5.5	Hypothesis Testing: General Comments	121
5.6	Hypothesis Testing: The Confidence-Interval Approach	122
	Two-Sided or Two-Tail Test	122
	One-Sided or One-Tail Test	124
5.7	Hypothesis Testing: The Test-of-Significance Approach	124
	Testing the Significance of Regression Coefficients: The t -Test	124
	Testing the Significance of a^2 : The χ^2 Test	128
5.8	Hypothesis Testing: Some Practical Aspects	129
	The Meaning of "Accepting" or "Rejecting" a Hypothesis	129
	The "Zero" Null Hypothesis and the "2-t" Rule of Thumb	129
	Forming the Null and Alternative Hypotheses	130
	Choosing α , the Level of Significance	131
	The Exact Level of Significance: The p Value	132
	Statistical Significance versus Practical Significance	133
	The Choice between Confidence-Interval and Test-of-Significance Approaches to Hypothesis Testing	134
5.9	Regression Analysis and Analysis of Variance	134
5.10	Application of Regression Analysis: The Problem of Prediction	137
	Mean Prediction	137
	Individual Prediction	138
5.11	Reporting the Results of Regression Analysis	140
5.12	Evaluating the Results of Regression Analysis	140
	Normality Test	141
	Other Tests of Model Adequacy	144
5.13	Summary and Conclusions	144
	Exercises	145
	Questions	145
	Problems	147

Appendix 5A	152
5A.1 Derivation of Equation (5.3.2)	152
5A.2 Derivation of Equation (5.9.1)	152
5A.3 Derivations of Equations (5.10.2) and (5.10.6)	153
Variance of Mean Prediction	153
Variance of Individual Prediction	153
6 Extensions of the Two-Variable Linear Regression Model	155
6.1 Regression through the Origin	155
r^2 for Regression-through-Origin Model	159
An Illustrative Example: The Characteristic Line of Portfolio Theory	159
6.2 Scaling and Units of Measurement	161
A Numerical Example: The Relationship between GPDI and GNP, United States, 1974-1983	163
A Word about Interpretation	164
6.3 Functional Forms of Regression Models	165
6.4 How to Measure Elasticity: The Log-Linear Model	165
An Illustrative Example: The Coffee Demand Function Revisited	167
6.5 Semilog Models: Log-Lin and Lin-Log Models	169
How to Measure the Growth Rate: The Log-Lin Model	169
The Lin-Log Model	172
6.6 Reciprocal Models	173
An Illustrative Example: The Phillips Curve for the United Kingdom, 1950-1966	176
6.7 Summary of Functional Forms	176
6.8 A Note on the Nature of the Stochastic Error Term: Additive versus Multiplicative Stochastic Error Term	178
6.9 Summary and Conclusions	179
Exercises	180
Questions	180
Problems	183
Appendix 6A	186
6A.1 Derivation of Least-Squares Estimators for Regression through the Origin	186
6A.2 SAS Output of the Characteristic Line (6.1.12)	189
6A.3 SAS Output of the United Kingdom Phillips Curve Regression (6.6.2)	190
7 Multiple Regression Analysis: The Problem of Estimation	
7.1 The Three-Variable Model: Notation and Assumptions	
7.2 Interpretation of Multiple Regression Equation	
7.3 The Meaning of Partial Regression Coefficients	
7.4 OLS and ML Estimation of the Partial Regression Coefficients	
OLS Estimators	
Variances and Standard Errors of OLS Estimators	

	Properties of OLS Estimators	199
	Maximum Likelihood Estimators	201
7.5	The Multiple Coefficient of Determination R^2 and the Multiple Coefficient of Correlation R	201
7.6	Example 7.1: The Expectations-Augmented Phillips Curve for the United States, 1970-1982	203
7.7	Simple Regression in the Context of Multiple Regression: Introduction to Specification Bias	204
7.8	R^2 and the Adjusted R^2	207
	Comparing Two R^2 Values	209
	Example 7.2: Coffee Demand Function Revisited	210
	The "Game" of Maximizing R^2	211
7.9	Partial Correlation Coefficients	211
	Explanation of Simple and Partial Correlation Coefficients	211
	Interpretation of Simple and Partial Correlation Coefficients	213
7.10	Example 7.3: The Cobb-Douglas Production Function: More on Functional Form	214
7.11	Polynomial Regression Models	217
	Example 7.4: Estimating the Total Cost Function	218
	Empirical Results	220
7.12	Summary and Conclusions	221
	Exercises	221
	Questions	221
	Problems	224
	Appendix 7A	231
	7A. 1 Derivation of OLS Estimators Given in Equations (7.4.3) and (7.4.5)	231
	7A.2 Equality between a_x of (7.3.5) and β_2 of (7.4.7)	232
	7A.3 Derivation of Equation (7.4.19)	232
	7A.4 Maximum Likelihood Estimation of the Multiple Regression Model	233
	7A.5 The Proof that $E(b_{12}) = \beta_1 + \beta_3 \beta_{32}$ (Equation 7.7.4)	234
	7A.6 SAS Output of the Expectations-Augmented Phillips Curve (7.6.2)	236
	7A.7 SAS Output of the Cobb-Douglas Production Function (7.10.4)	237
8	Multiple Regression Analysis: The Problem of Inference	238
8.1	The Normality Assumption Once Again	238
8.2	Example 8.1: U.S. Personal Consumption and Personal Disposal Income Relation, 1956-1970	239
8.3	Hypothesis Testing in Multiple Regression: General Comments	242
8.4	Hypothesis Testing about Individual Partial Regression Coefficients	242
8.5	Testing the Overall Significance of the Sample Regression	244

- The Analysis of Variance Approach to Testing the Overall Significance of an Observed Multiple Regression: The F Test
 - An Important Relationship between R^2 and F
 - The "Incremental," or "Marginal," Contribution of an Explanatory Variable
- 8.6 Testing the Equality of Two Regression Coefficients
 - Example 8.2: The Cubic Cost Function Revisited
- 8.7 Restricted Least Squares: Testing Linear Equality Restrictions
 - The t Test Approach
 - The F Test Approach: Restricted Least Squares
 - Example 8.3: The Cobb-Douglas Production Function for Taiwanese Agricultural Sector, 1958-1972
 - General F Testing
- 8.8 Comparing Two Regressions: Testing for Structural Stability of Regression Models
- 8.9 Testing the Functional Form of Regression: Choosing between Linear and Log-Linear Regression Models
 - Example 8.5: The Demand for Roses
- 8.10 Prediction with Multiple Regression
- 8.11 The Troika of Hypothesis Tests: The Likelihood Ratio (LR), Wald (W), and Lagrange Multiplier (LM) Tests
- 8.12 Summary and Conclusions
 - The Road Ahead
 - Exercises
 - Questions
 - Problems
 - Appendix 8A
 - Likelihood Ratio (LR) Test

9 The Matrix Approach to Linear Regression Model

- 9.1 The A:-Variable Linear Regression Model
- 9.2 Assumptions of the Classical Linear Regression Model in Matrix Notation
- 9.3 OLS Estimation
 - An Illustration
 - Variance-Covariance Matrix of β
 - Properties of OLS Vector $\hat{\beta}$
- 9.4 The Coefficient of Determination R^2 in Matrix Notation
- 9.5 The Correlation Matrix
- 9.6 Hypothesis Testing about Individual Regression Coefficients in Matrix Notation
- 9.7 Testing the Overall Significance of Regression: Analysis of Variance in Matrix Notation
- 9.8 Testing Linear Restrictions: General F Testing Using Matrix Notation
- 9.9 Prediction Using Multiple Regression: Matrix Formulation
 - Mean Prediction

	Individual Prediction	296
	Variance of Mean Prediction	297
	Variance of Individual Prediction	298
9.10	Summary of the Matrix Approach: An Illustrative Example	298
9.11	Summary and Conclusions	303
	Exercises	304
	Appendix 9A	309
	9A.1 Derivation of k Normal or Simultaneous Equations	309
	9A.2 Matrix Derivation of Normal Equations	310
	9A.3 Variance-Covariance Matrix of p	310
	9A.4 Blue Property of OLS Estimators	311

Part 2 Relaxing the Assumptions of the Classical Model

10	Multicollinearity and Micronumerosity	319
10.1	The Nature of Multicollinearity	320
10.2	Estimation in the Presence of Perfect Multicollinearity	323
10.3	Estimation in the Presence of "High" but "Imperfect" Multicollinearity	325
10.4	Multicollinearity: Much Ado about Nothing? Theoretical Consequences of Multicollinearity	325
10.5	Practical Consequences of Multicollinearity Large Variances and Covariances of OLS Estimators Wider Confidence Intervals "Insignificant" t Ratios A High R^2 but Few Significant t Ratios Sensitivity of OLS Estimators and Their Standard Errors to Small Changes in Data Consequences of Micronumerosity	327 328 329 330 330 331 332
10.6	An Illustrative Example: Consumption Expenditure in Relation to Income and Wealth	332
10.7	Detection of Multicollinearity	335
10.8	Remedial Measures	339
10.9	Is Multicollinearity Necessarily Bad? Maybe Not If the Objective Is Prediction Only	344
10.10	Summary and Conclusions Exercises Questions Problems	345 346 346 351
11	Heteroscedasticity	355
11.1	The Nature of Heteroscedasticity	355
11.2	OLS Estimation in the Presence of Heteroscedasticity	359
11.3	The Method of Generalized Least Squares (GLS) Difference between OLS and GLS	362 364
11.4	Consequences of Using OLS in the Presence of Heteroscedasticity OLS Estimation Allowing for Heteroscedasticity OLS Estimation Disregarding Heteroscedasticity	365 365 366

- 11.5 Detection of Heteroscedasticity
 - Informal Methods
 - Formal Methods
- 11.6 Remedial Measures
 - When *erf* Is Known: The Method of Weighted Least Squares
 - When *<rf* Is Not Known
- 11.7 A Concluding Example
- 11.8 Summary and Conclusions
 - Exercises
 - Questions
 - Problems
 - Appendix 11A
 - 11 A. 1 Proof of Equation (11.2.2)
 - 11 A.2 The Method of Weighted Least Squares

12 Autocorrelation

- 12.1 The Nature of the Problem
- 12.2 OLS Estimation in the Presence of Autocorrelation
- 12.3 The BLUE Estimator in the Presence of Autocorrelation
- 12.4 Consequences of Using OLS in the Presence of Autocorrelation
 - OLS Estimation Allowing for Autocorrelation
 - OLS Estimation Disregarding Autocorrelation
- 12.5 Detecting Autocorrelation
 - Graphical Method
 - The Runs Test
 - Durbin-Watson *d* Test
 - Additional Tests of Autocorrelation
- 12.6 Remedial Measures
 - When the Structure of Autocorrelation Is Known
 - When *p* Is Not Known
- 12.7 An Illustrative Example: The Relationship between Help-Wanted Index and the Unemployment Rate, United States: Comparison of the Methods
- 12.8 Autoregressive Conditional Heteroscedasticity (ARCH) Model
 - What to Do If ARCH Is Present?
 - A Word on the Durbin-Watson *d* Statistic and the ARCH Effect
- 12.9 Summary and Conclusions
 - Exercises
 - Questions
 - Problems
 - Appendix 12A
 - 12A.1 TSP Output of United States Wages (*Y*)-Productivity (*X*) Regression, 1960-1991

13 Econometric Modeling I: Traditional Econometric Methodology

- 13.1 The Traditional View of Econometric Modeling: Average Economic Regression (AER)

13.2	Types of Specification Errors	455
13.3	Consequences of Specification Errors	456
	Omitting a Relevant Variable (Underfitting a Model)	456
	Inclusion of an Irrelevant Variable (Overfitting a Model)	458
13.4	Tests of Specification Errors	459
	Detecting the Presence of Unnecessary Variables	460
	Tests for Omitted Variables and Incorrect Functional Form	461
13.5	Errors of Measurement	467
	Errors of Measurement in the Dependent Variable Y	468
	Errors of Measurement in the Explanatory Variable X	469
	An Example	470
	Measurement Errors in the Dependent Variable Y Only	471
	Errors of Measurement in X	472
13.6	Summary and Conclusions	472
	Exercises	473
	Questions	473
	Problems	476
	Appendix 13A	477
	13A.I The Consequences of Including an Irrelevant Variable: The Unbiasedness Property	477
	13A.2 Proof of (13.5.10)	478
14	Econometric Modeling II:	
	Alternative Econometric Methodologies	480
14.1	Learner's Approach to Model Selection	481
14.2	Hendry's Approach to Model Selection	485
14.3	Selected Diagnostic Tests: General Comments	486
14.4	Tests of Nonnested Hypothesis	487
	The Discrimination Approach	487
	The Discerning Approach	488
14.5	Summary and Conclusions	494
	Exercises	494
	Questions	494
	Problems	495

Part 3 Topics in Econometrics

15	Regression on Dummy Variables	499
15.1	The Nature of Dummy Variables	499
	Example 15.1: Professor's Salary by Sex	500
15.2	Regression on One Quantitative Variable and One Qualitative Variable with Two Classes, or Categories	502
	Example 15.2: Are Inventories Sensitive to Interest Rates?	505
15.3	Regression on One Quantitative Variable and One Qualitative Variable with More than Two Classes	505
15.4	Regression on One Quantitative Variable and Two Qualitative Variables	507

- 15.5 Example 15.3: The Economics of "Moonlighting"
- 15.6 Testing for Structural Stability of Regression Models: Basic Ideas
 - Example 15.4: Savings and Income, United Kingdom, 1946-1963
- 15.7 Comparing Two Regressions: The Dummy Variable Approach
- 15.8 Comparing Two Regressions: Further Illustration
 - Example 15.5: The Behavior of Unemployment and Unfilled Vacancies: Great Britain, 1958-1971
- 15.9 Interaction Effects
- 15.10 The Use of Dummy Variables in Seasonal Analysis
 - Example 15.6: Profits-Sales Behavior in U.S. Manufacturing
- 15.11 Piecewise Linear Regression
 - Example 15.7: Total Cost in Relation to Output
- 15.12 The Use of Dummy Variables in Combining Time Series and Cross-Sectional Data
 - Pooled Regression: Pooling Time Series and Cross-Sectional Data
 - Example 15.8: Investment Functions for General Motors and Westinghouse Companies
- 15.13 Some Technical Aspects of Dummy Variable Technique
 - The Interpretation of Dummy Variables in Semilogarithmic Regressions
 - Example 15.9: Semilogarithmic Regression with Dummy Variable
 - Another Method of Avoiding the Dummy Variable Trap
 - Dummy Variables and Heteroscedasticity
 - Dummy Variables and Autocorrelation
- 15.14 Topics for Further Study
- 15.15 Summary and Conclusions
- Exercises
 - Questions
 - Problems
- Appendix 15A
 - 15A.1 Data Matrix for Regression (15.8.2)
 - 15A.2 Data Matrix for Regression (15.10.2)

16 Regression on Dummy Dependent Variable: The LPM, Logit, Probit, and Tobit Models

- 16.1 Dummy Dependent Variable
- 16.2 The Linear Probability Model (LPM)
- 16.3 Problems in Estimation of LPM
 - Nonnormality of the Disturbances \llcorner ;
 - Heteroscedastic Variances of the Disturbances
 - Nonfulfillment of $0 < E(Y_i | X) < 1$
 - Questionable Value of R^2 as a Measure of Goodness of Fit

16.4	LPM: A Numerical Example	546
16.5	Applications of LPM	548
	Example 16.1: Cohen-Rea-Lerman study	548
	Example 16.2: Predicting a Bond Rating	551
	Example 16.3: Predicting Bond Defaults	552
16.6	Alternatives to LPM	552
16.7	The Logit Model	554
16.8	Estimation of the Logit Model	556
16.9	The Logit Model: A Numerical Example	558
16.10	The Logit Model: Illustrative Examples	561
	Example 16.4: "An Application of Logit Analysis to Prediction of Merger Targets"	561
	Example 16.5: Predicting a Bond Rating	562
16.11	The Probit Model	563
16.12	The Probit Model: A Numerical Example	567
	Logit versus Probit	567
	Comparing Logit and Probit Estimates	568
	The Marginal Effect of a Unit Change in the Value of a Regressor	569
16.13	The Probit Model: Example 16.5	569
16.14	The Tobit Model	570
16.15	Summary and Conclusions	575
	Exercises	576
	Questions	576
	Problems	578
17	Dynamic Econometric Model: Autoregressive and Distributed-Lag Models	584
17.1	The Role of "Time," or "Lag," in Economics	585
17.2	The Reasons for Lags	589
17.3	Estimation of Distributed-Lag Models	590
	Ad Hoc Estimation of Distributed-Lag Models	590
17.4	The Koyck Approach to Distributed-Lag Models	592
	The Median Lag	595
	The Mean Lag	595
17.5	Rationalization of the Koyck Model: The Adaptive Expectations Model	596
17.6	Another Rationalization of the Koyck Model: The Stock Adjustment, or Partial Adjustment, Model	599
17.7	Combination of Adaptive Expectations and Partial Adjustment Models	601
17.8	Estimation of Autoregressive Models	602
17.9	The Method of Instrumental Variables (IV)	604
17.10	Detecting Autocorrelation in Autoregressive Models: Durbin h Test	605
17.11	A Numerical Example: The Demand for Money in India	607
17.12	Illustrative Examples	609
	Example 17.7: The Fed and the Real Rate of Interest	609
	Example 17.8: The Short- and Long-Run Aggregate Consumption Functions for the United States, 1946-1972	611

- 17.13 The Almon Approach to Distributed-Lag Models: The Almon or Polynomial Distributed Lag (PDL)
- 17.14 Causality in Economics: The Granger Test
 - The Granger Test
 - Empirical Results
- 17.15 Summary and Conclusions
 - Exercises
 - Questions
 - Problems

Part 4 Simultaneous-Equation Models

18 Simultaneous-Equation Models

- 18.1 The Nature of Simultaneous-Equation Models
- 18.2 Examples of Simultaneous-Equation Models
 - Example 18.1: Demand-and-Supply Model
 - Example 18.2: Keynesian Model of Income Determination
 - Example 18.3: Wage-Price Models
 - Example 18.4: The IS Model of Macroeconomics
 - Example 18.5: The LM Model
 - Example 18.6: Econometric Models
- 18.3 The Simultaneous-Equation Bias: Inconsistency of OLS Estimators
- 18.4 The Simultaneous-Equation Bias: A Numerical Example
- 18.5 Summary and Conclusions
 - Exercises
 - Questions
 - Problems

19 The Identification Problem

- 19.1 Notations and Definitions
- 19.2 The Identification Problem
 - Underidentification
 - Just, or Exact, Identification
 - Overidentification
- 19.3 Rules for Identification
 - The Order Condition of Identifiability
 - The Rank Condition of Identifiability
- 19.4 A Test of Simultaneity
 - Hausman Specification Test
 - Example 19.5: Pindyck-Rubinfeld Model of Public Spending
- 19.5 Tests for Exogeneity
 - A Note on Causality and Exogeneity
- 19.6 Summary and Conclusions
 - Exercises

20 Simultaneous-Equation Methods

- 20.1 Approaches to Estimation
- 20.2 Recursive Models and Ordinary Least Squares

20.3	Estimation of a Just Identified Equation: The Method of Indirect Least Squares (ILS)	682
	An Illustrative Example	683
	Properties of ILS Estimators	686
20.4	Estimation of an Overidentified Equation: The Method of Two-Stage Least Squares (2SLS)	686
20.5	2SLS: A Numerical Example	690
20.6	Illustrative Examples	693
	Example 20.1: Advertising, Concentration, and Price Margins	693
	Example 20.2: Klein's Model I	694
	Example 20.3: The Capital Asset Pricing Model Expressed as a Recursive System	694
	Example 20.4: Revised Form of St. Louis Model	697
20.7	Summary and Conclusions	699
	Exercises	700
	Questions	700
	Problems	703
	Appendix 20A	704
	20A.1 Bias in the Indirect Least-Squares Estimators	704
	20A.2 Estimation of Standard Errors of 2SLS Estimators	705

Part 5 Time Series Econometrics

21	Time Series Econometrics I: Stationarity, Unit Roots, and Cointegration	709
21.1	A Look at Selected U.S. Economic Time Series	710
21.2	Stationary Stochastic Process	710
21.3	Test of Stationarity Based on Correlogram	714
21.4	The Unit Root Test of Stationarity	718
	Is the U.S. GDP Time Series Stationary?	720
	Is the First-Differenced GDP Series Stationary?	721
21.5	Trend-Stationary (TS) and Difference-Stationary (DS) Stochastic Process	722
21.6	Spurious Regression	724
21.7	Cointegration	725
	Engle-Granger (EG) or Augmented Engle-Granger (AEG) Test	726
	Cointegrating Regression Durbin-Watson (CRDW) Test	727
21.8	Cointegration and Error Correction Mechanism (ECM)	728
21.9	Summary and Conclusions	729
	Exercises	730
	Questions	730
	Problems	731
	Appendix 21A	732
	21A.1 A Random Walk Model	732

22	Time Series Econometrics II: Forecasting with ARIMA and VAR Models	734
22.1	Approaches to Economic Forecasting	734
22.2	AR, MA, and ARIMA Modeling of Time Series Data	736
	An Autoregressive (AR) Process	736
	A Moving Average (MA) Process	737
	An Autoregressive and Moving Average (ARMA) Process	737
	An Autoregressive Integrated Moving Average (ARIMA) Process	737
22.3	The Box-Jenkins (BJ) Methodology	738
22.4	Identification	739
22.5	Estimation of the ARIMA Model	742
22.6	Diagnostic Checking	743
22.7	Forecasting	744
22.8	Further Aspects of the BJ Methodology	745
22.9	Vector Autoregression (VAR)	746
	Estimation of VAR	746
	Forecasting with VAR	747
	Some Problems with VAR Modeling	747
	An Application of VAR: A VAR Model of the Texas Economy	747
22.10	Summary and Conclusions	
	Exercises	
	Questions	
	Problems	

Appendixes

A	A Review of Some Statistical Concepts
B	Rudiments of Matrix Algebra
C	A List of Statistical Computer Packages
D	Statistical Tables
	Table D. 1 Areas under the Standardized Normal Distribution
	Table D.2 Percentage Points of the t Distribution
	Table D.3 Upper Percentage Points of the F Distribution
	Table D.4 Upper Percentage Points of the χ^2 Distribution
	Table D.5 Durbin-Watson d Statistic: Significant Points of d_i and du at 0.05 and 0.01 Levels of Significance
	Table D.6 Critical Values of Runs in the Runs Test
