# CONTENTS OF VOLUME III

Introduction to the Series	v
Contents of the Handbook	vii
Preface to the Handbook	xi
<b>PART 7-SPECIAL TOPICS IN ECONOMETRICS: 2</b>	
<i>Chapter 25</i>	
Economic Data Issues	
ZVI GRILICHES	1465
1. Introduction: Data and econometricians- the uneasy alliance	1466
2. Economic data: An overview	1470
3. Data and their discontents	1472
4. Random measurement errors and the classic EVM	1476
5. Missing observations and incomplete data	1485
6. Missing variables and incomplete models	1495
7. Final remarks	1507
References	1509
<i>Chapter 26</i>	
Functional Forms in Econometric Model Building	
LAWRENCE J. LAU	1515
1. Introduction	1516
2. Criteria for the selection of functional forms	1520
2.1. Theoretical consistency	1520
2.2. Domain of applicability	1527
2.3. Flexibility	1539
2.4. Computational facility	1545
2.5. Factual conformity	1546
3. Compatibility of the criteria for the selection of functional forms	1547
3.1. Incompatibility of a global domain of applicability and flexibility	1548
3.2. Incompatibility of computational facility and factual conformity	1551
3.3. Incompatibility of a global domain of applicability, flexibility and computational facility	1552

4. Concluding remarks	1558
Appendix 1	1559
References	1564

*Chapter 27*

## Limited Dependent Variables

PHOEBUS J. DHRYMES	1567
0. Introduction	1568
1. Logit and probit	1568
1.i. Generalities	1568
1.2. Why a general linear model (GLM) formulation is inappropriate	1570
1.3. A utility maximization motivation	1572
1.4. Maximum likelihood estimation	1575
1.5. Goodness of fit	1579
2. Truncated dependent variables	1585
2.1. Generalities	1585
2.2. Why simple OLS procedures fail	1586
2.3. Estimation of parameters by ML methods	1589
2.4. An initial consistent estimator	1590
2.5. Limiting properties and distribution of the ML estimator	1595
2.6. Goodness of fit	1603
3. Sample selectivity	1604
3.1. Generalities	1604
3.2. Inconsistency of least squares procedures	1606
3.3. The LF and ML estimation	1610
3.4. An initial consistent estimator	1613
3.5. Limiting distribution of the ML estimator	1619
3.6. A test for selectivity bias	1625
References	1626

*Chapter 28*

## Disequilibrium, Self-selection, and Switching Models

G.S. MADDALA	1633
1. Introduction	1634
2. Estimation of the switching regression model: Sample separation known	1637
3. Estimation of the switching regression model: Sample separation unknown	1640
4. Estimation of the switching regression model with imperfect sample separation information	1646
5. Switching simultaneous systems	1649
6. Disequilibrium models: Different formulations of price adjustment	1652
6.1. The meaning of the price adjustment equation	1653

6.2. Modifications in the specification of the demand and supply functions	1656
6.3. The validity of the "Min" condition	1660
7. Some other problems of specification in disequilibrium models	1662
7.1. Problems of serial correlation	1663
7.2. Tests for distributional assumptions	1664
7.3. Tests for disequilibrium	1664
7.4. Models with inventories	1667
8. Multimarket disequilibrium models	1668
9. Models with self-selection	1672
10. Multiple criteria for selectivity	1676
11. Concluding remarks	1680
References	1682

Chapter 29

Econometric Analysis of Longitudinal Data

J. J. HECKMAN and B. SINGER	1689
0. Introduction	1690
1. Single spell models	1691
1.1. Statistical preliminaries	1691
1.2. Examples of duration models produced by economic theory	1695
1.3. Conventional reduced form models	1704
1.4. Identification and estimation strategies	1710
1.5. Sampling plans and initial conditions problems	1727
1.6. New issues that arise in formulating and estimating choice theoretic duration models	1744
2. Multiple spell models	1748
2.1. A unified framework	1748
2.2. General duration models for the analysis of event history data	1753
3. Summary	1759
References	1761

PART 8-SELECTED APPLICATIONS AND USES OF ECONOMETRICS

Chapter 30

Demand Analysis

ANGUS	DEATON	1767
0. Introduction		1768
1. Utility and the specification of demand		1769
1.1. Assumptions for empirical analysis		1769
1.2. Lagrangians and matrix methods		1771
1.3. Duality, cost functions and demands		1772
1.4. Inverse demand functions		1777

2.	Naive demand analysis	1778
2.1.	Simultaneity	1779
2.2.	Singularity of the variance-covariance matrix	1781
2.3.	Estimation	1783
2.4.	Interpretation of results	1787
2.5.	Flexible functional forms	1788
2.6.	Statistical testing procedures	1793
2.7.	Non-parametric tests	1796
3.	Cross-section demand analysis	1798
3.1.	Forms of Engel curves	1799
3.2.	Modelling demographic effects	1801
3.3.	Zero expenditures and other problems	1807
3.4.	Non-linear budget constraints	1810
4.	Separability	1813
4.1.	Weak separability	1813
4.2.	Strong separability and additivity	1817
5.	Aggregation over consumers	1819
6.	Behavior under quantity constraints	1823
7.	Other topics	1825
7.1.	Intertemporal demand analysis	1825
7.2.	Choice of qualities	1826
7.3.	Demand analysis and welfare economics	1827
	References	1829

*Chapter 31*

Econometric Methods for Modeling Producer Behavior

	DALE W. JORGENSON	1841
1.	Introduction	1842
1.1.	Production theory	1842
1.2.	Parametric form	1844
1.3.	Statistical method	1845
1.4.	Overview of the paper	1847
2.	Price functions	1848
2.1.	Duality	1849
2.2.	Substitution and technical change	1851
2.3.	Parametrization	1855
2.4.	Integrability	1857
3.	Statistical methods	1860
3.1.	Stochastic specification	1860
3.2.	Autocorrelation	1862
3.3.	Identification and estimation	1865

4. Applications of price functions	1871
4.1. Substitution	1872
4.2. Technical change	1876
4.3. Two stage allocation	1882
5. Cost functions	1884
5.1. Duality	1884
5.2. Substitution and economies of scale	1886
5.3. Parametrization and integrability	1889
5.4. Stochastic specification	1891
6. Applications of cost functions	1893
6.1. Economies of scale	1893
6.2. Multiple outputs	1897
7. Conclusion	1900
7.1. General equilibrium modeling	1900
7.2. Panel data	1902
7.3. Dynamic models	1904
References	1905

*Chapter 32*

Labor Econometrics

JAMES J. HECKMAN and THOMAS E. MACURDY	1917
0. Introduction	1918
1. The index function model	1920
1.1. Introduction	1920
1.2. Some definitions and basic ideas	1921
1.3. Sampling plans	1926
2. Estimation	1929
2.1. Regression functions characterizations	1930
2.2. Dummy endogenous variable models	1945
3. Applications of the index function model	1952
3.1. Models with the reservation wage property	1952
3.2. Prototypical dummy endogenous variable models	1959
3.3. Hours of work and labor supply	1963
4. Summary	1971
Appendix: The principal assumption	1972
References	1974

*Chapter 33*

Evaluating the Predictive Accuracy of Models

RAY C. FAIR	1979
1. Introduction	1980
2. Numerical solution of nonlinear models	1981

3. Evaluation of ex ante forecasts	1984
4. Evaluation of ex post forecasts	1986
5. An alternative method for evaluating predictive accuracy	1988
6. Conclusion	1993
References	1994

*Chapter 34*

New Econometric Approaches to Stabilization Policy in Stochastic Models of Macroeconomic Fluctuations

JOHN B. TAYLOR	1997
1. Introduction	1998
2. Solution concepts and techniques	1998
2.1. Scalar models	1999
2.2. Bivariate models	2016
2.3. The use of operators, generating functions, and z-transforms	2031
2.4. Higher order representations and factorization techniques	2033
2.5. Rational expectations solutions as boundary value problems	2037
3. Econometric evaluation of policy rules	2038
3.1. Policy evaluation for a univariate model	2039
3.2. The Lucas critique and the Cowles Commission critique	2040
3.3. Game-theoretic approaches	2041
4. Statistical inference	2041
4.1. Full information estimation	2041
4.2. Identification	2043
4.3. Hypothesis testing	2044
4.4. Limited information estimation methods	2044
5. General linear models	2045
5.1. A general first-order vector model	2045
5.2. Higher order vector models	2047
6. Techniques for nonlinear models	2048
6.1. Multiple shooting method	2049
6.2. Extended path method	2049
6.3. Nonlinear saddle path manifold method	2050
7. Concluding remarks	2051
References	2052

*Chapter 35*

Economic Policy Formation: Theory and Implementation (Applied Econometrics in the Public Sector)

LAWRENCE R. KLEIN	2057
1. Some contemporary policy issues	2058
2. Formal political economy	2063

3. Some policy projections	2070
4. The theory of economic policy	2072
5. Prospects	2087
Appendix: An outline of a combined (Keynes-Leontief) input-output/macro model	2088
List of Theorems	2095
Index	2097
