Contents

Introduction – Food is Life.....	1
1 Physical properties of food materials	7
1.1 Introduction.....	7
1.2 Mechanical properties	8
1.2.1 Definitions	8
1.2.2 Rheological models	9
1.3 Thermal properties	10
1.4 Electrical properties	11
1.5 Structure	11
1.6 Water activity	13
1.6.1 The importance of water in foods.....	13
1.6.2 Water activity, definition and determination	14
1.6.3 Water activity: prediction	14
1.6.4 Water vapor sorption isotherms	16
1.6.5 Water activity: effect on food quality and stability.....	19
1.7 Phase transition phenomena in foods	19
1.7.1 The glassy state in foods	19
1.7.2 Glass transition temperature	20
2 Fluid flow.....	27
2.1 Introduction.....	27
2.2 Elements of fluid dynamics.....	27
2.2.1 Viscosity.....	27
2.2.2 Fluid flow regimes.....	28
2.2.3 Typical applications of Newtonian laminar flow	30
2.2.3a Laminar flow in a cylindrical channel (pipe or tube)	30
2.2.3b Laminar fluid flow on flat surfaces and channels	33
2.2.3c Laminar fluid flow around immersed particles.....	34
2.2.3d Fluid flow through porous media.....	36
2.2.4 Turbulent fluid flow	36
2.2.4a Turbulent Newtonian fluid flow in a cylindrical channel (tube or pipe).....	37
2.2.4b Turbulent fluid flow around immersed particles	39
2.3 Flow properties of fluids.....	40
2.3.1 Types of fluid flow behavior.....	40
2.3.2 Non-Newtonian fluid flow in pipes	41

2.4	Transportation of fluids	43
2.4.1	Energy relations, the Bernoulli Equation	43
2.4.2	Pumps: Types and operation	46
2.4.3	Pump selection	52
2.4.4	Ejectors	55
2.4.5	Piping	56
2.5	Flow of particulate solids (powder flow)	56
2.5.1	Introduction	56
2.5.2	Flow properties of particulate solids	57
2.5.3	Fluidization	62
2.5.4	Pneumatic transport	65
3	Heat and mass transfer, basic principles.....	69
3.1	Introduction	69
3.2	Basic relations in transport phenomena	69
3.2.1	Basic laws of transport	69
3.2.2	Mechanisms of heat and mass transfer	70
3.3	Conductive heat and mass transfer	70
3.3.1	The Fourier and Fick laws	70
3.3.2	Integration of Fourier's and Fick's laws for steady-state conductive transport.....	71
3.3.3	Thermal conductivity, thermal diffusivity and molecular diffusivity	73
3.3.4	Examples of steady-state conductive heat and mass transfer processes.....	76
3.4	Convective heat and mass transfer.....	81
3.4.1	Film (or surface) heat and mass transfer coefficients	81
3.4.2	Empirical correlations for convection heat and mass transfer	84
3.4.3	Steady-state interphase mass transfer	87
3.5	Unsteady state heat and mass transfer.....	89
3.5.1	The 2nd Fourier and Fick laws	89
3.5.2	Solution of Fourier's second law equation for an infinite slab	90
3.5.3	Transient conduction transfer in finite solids.....	92
3.5.4	Transient convective transfer in a semi-infinite body	94
3.5.5	Unsteady state convective transfer	95
3.6	Heat transfer by radiation	96
3.6.1	Interaction between matter and thermal radiation	96
3.6.2	Radiation heat exchange between surfaces.....	97
3.6.3	Radiation combined with convection.....	100
3.7	Heat exchangers	100
3.7.1	Overall coefficient of heat transfer.....	100
3.7.2	Heat exchange between flowing fluids.....	102
3.7.3	Fouling	104
3.7.4	Heat exchangers in the food process industry.....	105
3.8	Microwave heating.....	107
3.8.1	Basic principles of microwave heating.....	108

3.9	Ohmic heating.....	109
3.9.1	Introduction.....	109
3.9.2	Basic principles.....	110
3.9.3	Applications and equipment	112
4	Reaction kinetics.....	115
4.1	Introduction.....	115
4.2	Basic concepts.....	116
4.2.1	Elementary and non-elementary reactions.....	116
4.2.2	Reaction order	116
4.2.3	Effect of temperature on reaction kinetics.....	119
4.3	Kinetics of biological processes.....	121
4.3.1	Enzyme-catalyzed reactions.....	121
4.3.2	Growth of microorganisms	122
4.4	Residence time and residence time distribution	123
4.4.1	Reactors in food processing	123
4.4.2	Residence time distribution.....	124
5	Elements of process control	129
5.1	Introduction.....	129
5.2	Basic concepts.....	129
5.3	Basic control structures.....	131
5.3.1	Feedback control.....	131
5.3.2	Feed-forward control	131
5.3.3	Comparative merits of control strategies.....	132
5.4	The block diagram	132
5.5	Input, output and process dynamics.....	133
5.5.1	First order response	133
5.5.2	Second order systems	135
5.6	Control modes (control algorithms)	136
5.6.1	On-off (binary) control.....	136
5.6.2	Proportional (P) control	138
5.6.3	Integral (I) control.....	139
5.6.4	Proportional-integral (PI) control.....	140
5.6.5	Proportional-integral-differential (PID) control.....	140
5.6.6	Optimization of control	141
5.7	The physical elements of the control system	142
5.7.1	The sensors (measuring elements).....	142
5.7.2	The controllers	149
5.7.3	The actuators	149
6	Size reduction	153
6.1	Introduction.....	153
6.2	Particle size and particle size distribution	154
6.2.1	Defining the size of a single particle	154
6.2.2	Particle size distribution in a population of particles; defining a 'mean particle size'.....	155
6.2.3	Mathematical models of PSD.....	158
6.2.4	A note on particle shape	160

6.3	Size reduction of solids, basic principles.....	163
6.3.1	Mechanism of size reduction in solids.....	163
6.3.2	Particle size distribution after size reduction.....	163
6.3.3	Energy consumption	163
6.4	Size reduction of solids, equipment and methods.....	165
6.4.1	Impact mills	166
6.4.2	Pressure mills	167
6.4.3	Attrition mills	168
6.4.4	Cutters and choppers	170
7	Mixing	175
7.1	Introduction	175
7.2	Mixing of fluids (blending)	175
7.2.1	Types of blenders.....	175
7.2.2	Flow patterns in fluid mixing	177
7.2.3	Energy input in fluid mixing.....	178
7.3	Kneading.....	181
7.4	In-flow mixing.....	184
7.5	Mixing of particulate solids	184
7.5.1	Mixing and segregation	184
7.5.2	Quality of mixing, the concept of 'mixedness'	184
7.5.3	Equipment for mixing particulate solids	187
7.6	Homogenization.....	189
7.6.1	Basic principles.....	189
7.6.2	Homogenizers	191
8	Filtration	195
8.1	Introduction	195
8.2	Depth filtration	196
8.3	Surface (barrier) filtration	198
8.3.1	Mechanisms.....	198
8.3.2	Rate of filtration	199
8.3.3	Optimization of the filtration cycle	204
8.3.4	Characteristics of filtration cakes.....	205
8.3.5	The role of cakes in filtration	206
8.4	Filtration equipment	207
8.4.1	Depth filters	207
8.4.2	Barrier (surface) filters	207
8.5	Expression	211
8.5.1	Introduction.....	211
8.5.2	Mechanisms.....	211
8.5.3	Applications and equipment	213
9	Centrifugation	217
9.1	Introduction.....	217
9.2	Basic principles.....	218
9.2.1	The continuous settling tank	218
9.2.2	From the settling tank to the tubular centrifuge.....	220
9.2.3	The baffled settling tank and the disc-bowl centrifuge	223
9.2.4	Liquid-liquid separation	224

9.3	Centrifuges	226
9.3.1	Tubular centrifuges	227
9.3.2	Disc-bowl centrifuges	228
9.3.3	Decanter centrifuges	230
9.3.4	Basket centrifuges	230
9.4	Cyclones	231
10	Membrane processes	233
10.1	Introduction	233
10.2	Tangential filtration	234
10.3	Mass transfer through MF and UF membranes	235
10.3.1	Solvent transport	235
10.3.2	Solute transport; sieving coefficient and rejection	237
10.3.3	Concentration polarization and gel polarization	238
10.4	Mass transfer in reverse osmosis	241
10.4.1	Basic concepts	241
10.4.2	Solvent transport in reverse osmosis	242
10.5	Membrane systems	245
10.5.1	Membrane materials	245
10.5.2	Membrane configurations	247
10.6	Membrane processes in the food industry	249
10.6.1	Microfiltration	249
10.6.2	Ultrafiltration	249
10.6.3	Nanofiltration and reverse osmosis	251
10.7	Electrodialysis	253
11	Extraction	259
11.1	Introduction	259
11.2	Solid-liquid extraction (leaching)	261
11.2.1	Definitions	261
11.2.2	Material balance	262
11.2.3	Equilibrium	262
11.2.4	Multistage extraction	262
11.2.5	Stage efficiency	266
11.2.6	Solid-liquid extraction systems	268
11.3	Supercritical fluid extraction	271
11.3.1	Basic principles	271
11.3.2	Supercritical fluids as solvents	272
11.3.3	Supercritical extraction systems	273
11.3.4	Applications	275
11.4	Liquid-liquid extraction	276
11.4.1	Principles	276
11.4.2	Applications	276
12	Adsorption and ion exchange	279
12.1	Introduction	279
12.2	Equilibrium conditions	280
12.3	Batch adsorption	282
12.4	Adsorption in columns	287

12.5	Ion exchange	288
12.5.1	Basic principles	288
12.5.2	Properties of ion exchangers	289
12.5.3	Application: Water softening using ion exchange	292
12.5.4	Application: Reduction of acidity in fruit juices	293
13	Distillation	295
13.1	Introduction	295
13.2	Vapor-liquid equilibrium (VLE)	295
13.3	Continuous flash distillation	298
13.4	Batch (differential) distillation	301
13.5	Fractional distillation	304
13.5.1	Basic concepts	304
13.5.2	Analysis and design of the column	305
13.5.3	Effect of the reflux ratio	310
13.5.4	Tray configuration	310
13.5.5	Column configuration	311
13.5.6	Heating with live steam	311
13.5.7	Energy considerations	312
13.6	Steam distillation	313
13.7	Distillation of wines and spirits	314
14	Crystallization and dissolution	317
14.1	Introduction	317
14.2	Crystallization kinetics	318
14.2.1	Nucleation	318
14.2.2	Crystal growth	320
14.3	Crystallization in the food industry	323
14.3.1	Equipment	323
14.3.2	Processes	325
14.4	Dissolution	328
14.4.1	Introduction	328
14.4.2	Mechanism and kinetics	328
15	Extrusion	333
15.1	Introduction	333
15.2	The single-screw extruder	334
15.2.1	Structure	334
15.2.2	Operation	335
15.2.3	Flow models, extruder throughput	337
15.2.4	Residence time distribution	340
15.3	Twin-screw extruders	340
15.3.1	Structure	340
15.3.2	Operation	342
15.3.3	Advantages and shortcomings	343
15.4	Effect on foods	343
15.4.1	Physical effects	343
15.4.2	Chemical effect	344
15.5	Food applications of extrusion	345
15.5.1	Forming extrusion of pasta	345

15.5.2	Expanded snacks.....	345
15.5.3	Ready-to-eat cereals.....	346
15.5.4	Pellets.....	347
15.5.5	Other extruded starchy and cereal products.....	347
15.5.6	Texturized protein products.....	348
15.5.7	Confectionery and chocolate.....	348
15.5.8	Pet foods.....	349
16	Spoilage and preservation of foods.....	351
16.1	Mechanisms of food spoilage.....	351
16.2	Food preservation processes.....	351
16.3	Combined processes (the 'hurdle effect').....	353
16.4	Packaging.....	353
17	Thermal processing.....	355
17.1	Introduction.....	355
17.2	The kinetics of thermal inactivation of microorganisms and enzymes.....	356
17.2.1	The concept of decimal reduction time.....	356
17.2.2	Effect of the temperature on the rate of thermal destruction/inactivation.....	358
17.3	Lethality of thermal processes.....	360
17.4	Optimization of thermal processes with respect to quality.....	363
17.5	Heat transfer considerations in thermal processing.....	364
17.5.1	In-package thermal processing.....	364
17.5.2	In-flow thermal processing.....	369
18	Thermal processes, methods and equipment.....	375
18.1	Introduction.....	375
18.2	Thermal processing in hermetically closed containers.....	375
18.2.1	Filling into the cans.....	376
18.2.2	Expelling air from the head-space.....	378
18.2.3	Sealing.....	379
18.2.4	Heat processing.....	380
18.3	Thermal processing in bulk, before packaging.....	386
18.3.1	Bulk heating – hot filling – sealing – cooling in container.....	386
18.3.2	Bulk heating – holding – bulk cooling – cold filling – sealing.....	386
18.3.3	Aseptic processing.....	388
19	Refrigeration, chilling and freezing.....	391
19.1	Introduction.....	391
19.2	Effect of temperature on food spoilage.....	392
19.2.1	Temperature and chemical activity.....	392
19.2.2	Effect of low temperature on enzymatic spoilage.....	395
19.2.3	Effect of low temperature on microorganisms.....	396
19.2.4	Effect of low temperature on biologically active (respiring) tissue.....	398
19.2.5	The effect of low temperature on physical properties.....	399
19.3	Freezing.....	400
19.3.1	Phase transition, freezing point.....	401

19.3.2	Freezing kinetics, freezing time	402
19.3.3	Effect of freezing and frozen storage on product quality	408
20	Refrigeration, equipment and methods	413
20.1	Sources of refrigeration	413
20.1.1	Mechanical refrigeration	413
20.1.2	Refrigerants	418
20.1.3	Distribution and delivery of refrigeration	419
20.2	Cold storage and refrigerated transport	420
20.3	Chillers and freezers	423
20.3.1	Blast cooling	423
20.3.2	Contact freezers	425
20.3.3	Immersion cooling	426
20.3.4	Evaporative cooling	426
21	Evaporation	429
21.1	Introduction	429
21.2	Material and energy balance	430
21.3	Heat transfer	432
21.3.1	The overall coefficient of heat transfer U	433
21.3.2	The temperature difference $T_s - T_c$ (ΔT)	436
21.4	Energy management	440
21.4.1	Multiple-effect evaporation	441
21.4.2	Vapor recompression	446
21.5	Condensers	447
21.6	Evaporators in the food industry	448
21.6.1	Open pan batch evaporator	448
21.6.2	Vacuum pan evaporator	449
21.6.3	Evaporators with tubular heat exchangers	449
21.6.4	Evaporators with external tubular heat exchangers	451
21.6.5	Boiling film evaporators	451
21.7	Effect of evaporation on food quality	454
21.7.1	Thermal effects	454
21.7.2	Loss of volatile flavor components	457
22	Dehydration	459
22.1	Introduction	459
22.2	Thermodynamics of moist air (psychrometry)	461
22.2.1	Basic principles	461
22.2.2	Humidity	461
22.2.3	Saturation, relative humidity (RH)	462
22.2.4	Adiabatic saturation, wet-bulb temperature	462
22.2.5	Dew point	463
22.3	Convective drying (air drying)	464
22.3.1	The drying curve	464
22.3.2	The constant rate phase	467
22.3.3	The falling rate phase	470
22.3.4	Calculation of drying time	472
22.3.5	Effect of external conditions on the drying rate	475

22.3.6	Relationship between film coefficients in convective drying...	476
22.3.7	Effect of radiation heating	477
22.3.8	Characteristic drying curves	477
22.4	Drying under varying external conditions.....	478
22.4.1	Batch drying on trays	478
22.4.2	Through-flow batch drying in a fixed bed.....	480
22.4.3	Continuous air drying on a belt or in a tunnel.....	481
22.5	Conductive (boiling) drying.....	481
22.5.1	Basic principles	481
22.5.2	Kinetics.....	482
22.5.3	Systems and applications.....	483
22.6	Dryers in the food processing industry	485
22.6.1	Cabinet dryers.....	486
22.6.2	Tunnel dryers	487
22.6.3	Belt dryers	489
22.6.4	Belt-trough dryers	489
22.6.5	Rotary dryers	490
22.6.6	Bin dryers	490
22.6.7	Grain dryers.....	492
22.6.8	Spray dryers.....	492
22.6.9	Fluidized bed dryer.....	497
22.6.10	Pneumatic dryer.....	498
22.6.11	Drum dryers.....	499
22.6.12	Screw conveyor and mixer dryers.....	500
22.6.13	Sun drying, solar drying.....	501
22.7	Issues in food drying technology.....	501
22.7.1	Pre-drying treatments.....	501
22.7.2	Effect of drying conditions on quality.....	502
22.7.3	Post-drying treatments	503
22.7.4	Rehydration characteristics.....	503
22.7.5	Agglomeration	504
22.8	Energy consumption in drying	504
22.9	Osmotic dehydration	507
23	Freeze drying (lyophilization) and freeze concentration	511
23.1	Introduction.....	511
23.2	Sublimation of water	511
23.3	Heat and mass transfer in freeze drying.....	512
23.4	Freeze drying, in practice.....	518
23.4.1	Freezing.....	518
23.4.2	Drying conditions.....	518
23.4.3	Freeze drying, commercial facilities	518
23.4.4	Freeze dryers	519
23.5	Freeze concentration.....	520
23.5.1	Basic principles	520
23.5.2	The process of freeze concentration	521
24	Frying, baking, roasting	525
24.1	Introduction.....	525

24.2	Frying.....	525
24.2.1	Types of frying.....	525
24.2.2	Heat and mass transfer in frying.....	526
24.2.3	Systems and operation.....	527
24.2.4	Health aspects of fried foods.....	528
24.3	Baking and roasting.....	528
25	Ionizing irradiation and other non-thermal preservation processes	533
25.1	Preservation by ionizing radiations.....	533
25.1.1	Introduction.....	533
25.1.2	Ionizing radiations.....	533
25.1.3	Radiation sources.....	534
25.1.4	Interaction with matter.....	535
25.1.5	Radiation dose.....	537
25.1.6	Chemical and biological effects of ionizing irradiation.....	538
25.1.7	Industrial applications.....	540
25.2	High hydrostatic pressure preservation.....	541
25.3	Pulsed electric fields (PEF).....	542
25.4	Pulsed intense light.....	542
26	Food packaging.....	545
26.1	Introduction.....	545
26.2	Packaging materials.....	546
26.2.1	Introduction.....	546
26.2.2	Materials for packaging foods.....	548
26.2.3	Transport properties of packaging materials.....	551
26.2.4	Optical properties.....	553
26.2.5	Mechanical properties.....	554
26.2.6	Chemical reactivity.....	555
26.3	The atmosphere in the package.....	556
26.3.1	Vacuum packaging.....	556
26.3.2	Controlled atmosphere packaging (CAP).....	557
26.3.3	Modified atmosphere packaging (MAP).....	557
26.3.4	Active packaging.....	557
26.4	Environmental issues.....	558
27	Cleaning, disinfection, sanitation.....	561
27.1	Introduction.....	561
27.2	Cleaning kinetics and mechanisms.....	562
27.2.1	Effect of the contaminant.....	562
27.2.2	Effect of the support.....	564
27.2.3	Effect of the cleaning agent.....	564
27.2.4	Effect of the temperature.....	566
27.2.5	Effect of mechanical action (shear).....	566
27.3	Kinetics of disinfection.....	567
27.4	Cleaning of raw materials.....	568
27.5	Cleaning of plants and equipment.....	570
27.5.1	Cleaning out of place (COP).....	570
27.5.2	Cleaning in place (CIP).....	570
27.6	Cleaning of packages.....	571
27.7	Odor abatement.....	571
