

Environment in the European Union at the turn of the century

Contents

Foreword.....	7
Acknowledgements.....	9
I Context, scope and objectives.....	13
1.1. Introduction.....	13
1.2. Summary.....	23
II Societal developments and use of resources.....	39
2.1. Meeting needs, consuming resources.....	39
1. Economic activity and the environment: links and limits.....	39
2. Natural and man-made resources: substitutes or complements?.....	40
3. Resources: stocks, flows, accounts and impacts.....	41
4. Eco-efficiency: getting more from less.....	44
5. Equity and sustainable development.....	47
6. Monitoring progress towards more welfare from less nature.....	48
2.2. Economic developments.....	53
1. Economy and industry.....	53
2. Population, households, consumption and tourism.....	55
3. Agriculture.....	56
4. Energy.....	60
5. Transport.....	62
2.3. Land use 'footprints'.....	69
1. Land, a limited resource, under pressure.....	69
2. Land and landscapes under significant changes.....	70
3. The influence of EU policies.....	72
4. Implications of EU enlargement.....	73
5. A need for territorial policies.....	74
III Environmental issues.....	79
3.1. Greenhouse gases and climate change.....	79
1. An issue under international scrutiny.....	79
2. Current policy targets and environmental policies.....	84
3. Sources and trends of greenhouse gas emissions.....	88

4. Progress and outlook (2000 and 2010).....	92
5. Possible future responses in the European Union.....	96
3.2. Ozone-depleting substances.....	99
1. Depleting of the ozone layer.....	99
2. Action to protect the ozone layer.....	103
3. The effects of ozone depletion.....	108
3.3. Dispersion of hazardous substances.....	111
1. Chemicals in society.....	112
2. The fate of chemicals in the environment.....	115
3. Chemicals of concern.....	118
4. Exposure estimation.....	122
5. The outlook to 2010.....	125
6. Emerging trends: minimisation of dispersion and substitution by less harmful substances.....	128
3.4. Transboundary air pollution.....	133
1. Transboundary air pollution: a complex problem.....	133
2. Trends in emissions.....	135
3. Photochemical smog.....	137
4. Acidification.....	141
5. Effects on flora and fauna.....	144
6. Future trends.....	146
7. Future acidification and summer smog policies.....	150
8. Emerging issues.....	151
3.5. Water Stress.....	155
1. Focus on major water stress problems.....	155
2. How much water is available?.....	156
3. Just using water pollutes it.....	163
4. Wastewater treatment.....	166
5. Trends in quality.....	172
6. Policy responses to alleviate water stress.....	176
3.6. Soil degradation.....	183
1. Why are Europe's soil degrading?.....	183
2. What is the current state of Europe's soils?.....	187
3. In search of responses.....	197
3.7. Waste generation and management.....	203
1. The main problems related to waste generation and management.....	203

2. Analysis of selected waste streams.....	206
3. Waste amounts and treatment in the Accession Countries.....	211
4. Environmental impacts of landfilling and incineration of waste.....	211
5. Outlook.....	214
6. Responses - what is being done and is this sufficient to solve the problems?.....	217
3.8. Natural and technological hazards.....	227
1. Accidents still happen.....	227
2. Are we having more major accidents?.....	229
3. More management of hazards is necessary.....	238
3.9. Genetically modified organisms.....	245
1. GMOs in the European Union: setting the scene.....	245
2. Investigating the risks of gene flow: a case study of gene transfer from oilseed rape to related wild plants...	253
3. Evolving regulations on the release of genetically modified organisms.....	255
4. Defining risk assessment for GMOs.....	258
3.10. Human health issues.....	263
1. Introduction.....	263
2. Some dominant environmental health issues in Europe .	264
3. Other environmental hazards of concern.....	269
4. Approaches to environment and health.....	277
3.11.Changes and loss of biodiversity.....	285
1. Main economic sectors influencing European biodiversity.....	285
2. From awareness to policy.....	287
3. What is special about Europe and biodiversity?.....	288
4. Habitats and ecosystems: integrating environmental changes.....	290
5. From policy to action.....	302
<i>Windows on Europe: the spatial dimension</i>.....	311
3.12.Urban areas.....	313
1. Our urban lifestyle, urban sprawl: the unsustainable present.....	313
2. Pressures on environmental resources.....	318
3. Transport and the urban environment.....	322

4. Urban air pollution: road transport takes the lead.....	324
5. Urban noise issues.....	328
6. Towards an integrated urban policy?.....	331
3.13. Rural areas - our link to the land.....	337
1. The changing nature of the rural world.....	337
2. The effects of the rural environment.....	340
3. What future for rural areas?.....	348
3.14. Coastal and marine zones.....	357
1. The issue.....	357
2. The main drivers affecting coastal and marine areas	359
3. Environmental conditions in regional seas.....	364
4. What is the policy response for coastal and marine zones.....	370
3.15. Mountain areas.....	377
1. Mountains - the undervalued ecological backbone of Europe.....	377
2. How can the environment of remote mountains be threatened?.....	379
3. Are mountains areas of marginal interest for Europe?....	389
IV Closing the gaps.....	397
4.1. Integration of the economy and the environment.....	397
1. Why and how to integrate economy and environment in the EU.....	398
2. Overview of key instruments for integrating economic and environmental policy.....	399
3. Agriculture.....	406
4. Industry.....	409
5. Energy.....	412
6. Transport sector.....	416
7. Households.....	420
4.2. Environmental information: needs and gaps.....	427
1. The issue.....	427
2. Existing information and new needs.....	428
3. Using information to improve public awareness and participation.....	435
Glossary.....	443
