

Johannes Voit

The Statistical Mechanics of Financial Markets

With 92 Figures and 6 Tables

Springer

Contents

1. Introduction	1
1.1 Motivation	1
1.2 Why Physicists? Why Models of Physics?	3
1.3 Physics and Finance – Historical	6
1.4 Aims of this Book	8
2. Basic Information on Capital Markets	13
2.1 Terminology	13
2.2 Three Important Derivatives	14
2.2.1 Forward Contracts.....	14
2.2.2 Futures Contract	15
2.2.3 Options	15
2.3 Derivative Positions.....	17
2.4 Market Actors	19
2.5 Price Formation at Organized Exchanges	20
2.5.1 Order Types	20
2.5.2 Price Formation by Auction	21
2.5.3 Continuous Trading: the XETRA Computer Trading System	23
3. Random Walks in Finance and Physics	25
3.1 Important Questions	25
3.2 Bachelier’s “Théorie de la Spéculation”	26
3.2.1 Preliminaries	26
3.2.2 Probabilities in Stock Market Operations	30
3.2.3 Empirical Data on Successful Operations in Stock Markets	37
3.2.4 Biographical Information on Louis Bachelier (1870–1946)	38
3.3 Einstein’s Theory of Brownian Motion	39
3.3.1 Osmotic Pressure and Diffusion in Suspensions	39
3.3.2 Brownian Motion.....	41
3.4 Experimental Situation.....	42
3.4.1 Financial Data	42

3.4.2	Perrin's Observations of Brownian Motion	44
3.4.3	One-Dimensional Motion of Electronic Spins	44
4.	The Black–Scholes Theory of Option Prices	49
4.1	Important Questions	49
4.2	Assumptions and Notation	50
4.2.1	Assumptions	50
4.2.2	Notation	51
4.3	Prices for Derivatives	51
4.3.1	Forward Price	51
4.3.2	Futures Price	53
4.3.3	Limits on Option Prices	54
4.4	Modeling Fluctuations of Financial Assets	56
4.4.1	Stochastic Processes	57
4.4.2	The Standard Model of Stock Prices	65
4.4.3	The Itô Lemma	66
4.4.4	Log-normal Distributions for Stock Prices	68
4.5	Option Pricing	70
4.5.1	The Black–Scholes Differential Equation	70
4.5.2	Solution of the Black–Scholes Equation	73
4.5.3	Risk-Neutral Valuation	78
4.5.4	Implied Volatility	79
5.	Scaling in Financial Data and in Physics	85
5.1	Important Questions	85
5.2	Stationarity of Financial Markets	85
5.3	Geometric Brownian Motion	90
5.3.1	Price Histories	90
5.3.2	Statistical Independence of Price Fluctuations	90
5.3.3	Statistics of Price Changes of Financial Assets	95
5.4	Pareto Laws and Lévy Flights	105
5.4.1	Definitions	105
5.4.2	The Gaussian Distribution and the Central Limit Theorem	107
5.4.3	Lévy Distributions	110
5.4.4	Non-stable Distributions with Power Laws	112
5.5	Scaling, Lévy Distributions, and Lévy Flights in Nature	115
5.5.1	Criticality and Self-Organized Criticality, Diffusion and Superdiffusion	116
5.5.2	Micelles	117
5.5.3	Fluid Dynamics	118
5.5.4	The Dynamics of the Human Heart	120
5.5.5	Amorphous Semiconductors and Glasses	123
5.5.6	Superposition of Chaotic Processes	125
5.5.7	Tsallis Statistics	127

5.6	New Developments: Non-stable Scaling, Temporal and Interasset Correlations in Financial Markets	131
5.6.1	Non-stable Scaling in Financial Asset Returns.....	131
5.6.2	The Breadth of the Market	135
5.6.3	Non-linear Temporal Correlations	138
5.6.4	Stochastic Volatility Models	144
5.6.5	Cross-Correlations in Stock Markets	146
6.	Turbulence and Foreign Exchange Markets	153
6.1	Important Questions	153
6.2	Turbulent Flows.....	153
6.2.1	Phenomenology	154
6.2.2	Statistical Description of Turbulence.....	156
6.2.3	Relation to Non-extensive Statistical Mechanics	161
6.3	Foreign Exchange Markets	162
6.3.1	Why Foreign Exchange Markets?	162
6.3.2	Empirical Results	163
6.3.3	Stochastic Cascade Models	169
6.3.4	The Multifractal Interpretation	171
7.	Risk Control and Derivative Pricing in Non-Gaussian Markets	177
7.1	Important Questions	177
7.2	Risk Control	178
7.2.1	Statistics of Extremal Events	178
7.2.2	Risk Measurement	180
7.2.3	Risk Management by Diversification	182
7.3	Derivative Pricing Beyond Black–Scholes	187
7.3.1	Application to Forward Contracts	188
7.3.2	Option Pricing (European Calls)	189
7.3.3	Monte Carlo Simulations	194
7.3.4	Option Pricing Beyond Black–Scholes: Alternative Approaches	197
8.	Microscopic Market Models	209
8.1	Important Questions	209
8.2	Are Markets Efficient?	210
8.3	Computer Simulation of Market Models	214
8.3.1	Two Classical Examples	214
8.3.2	Recent Models	215
8.4	The Minority Game	235
8.4.1	The Basic Minority Game	236
8.4.2	A Phase Transition in the Minority Game	238
8.4.3	Relation to Financial Markets.....	239
8.4.4	Spin Glasses and an Exact Solution.....	241
8.4.5	Extensions of the Minority Game.....	243

XIV Contents

9. Theory of Stock Exchange Crashes	247
9.1 Important Questions	247
9.2 Examples	248
9.3 Earthquakes and Material Failure	252
9.4 Stock Exchange Crashes	258
9.5 Are Crashes Rational?	263
9.6 What Happens After a Crash?	265
9.7 A Richter Scale for Financial Markets	267
A. Appendix: Information Sources	271
Notes and References	276
Index	285
