Contents

1. Tyre Characteristics and Vehicle Handling and Stability	1
1.1. Introduction	1
1.2. Tyre and Axle Characteristics	2
1.2.1. Introduction to Tyre Characteristics	2
1.2.2. Effective Axle Cornering Characteristics	7
1.3. Vehicle Handling and Stability	16
1.3.1. Differential Equations for Plane Vehicle Motions	17
1.3.2. Linear Analysis of the Two-Degree of Freedom Model	23
1.3.3. Non-Linear Steady-State Cornering Solutions	37
1.3.4. The Vehicle at Braking or Driving	51
1.3.5. The Moment Method	53
1.3.6. The Car-Trailer Combination	55
1.3.7. Vehicle Dynamics at More Complex Tyre Slip Conditions	60
2. Basic Tyre Modelling Considerations	61
2.1. Introduction	61
2.2. Definition of Tyre Input Quantities	63
2.3. Assessment of Tyre Input Motion Components	71
2.4. Fundamental Differential Equations for a Rolling and Slipping Body	75
2.5. Tyre Models (Introductory Discussion)	84
3. Theory of Steady-State Slip Force and Moment Generation	90
3.1. Introduction	90
3.2. Tyre Brush Model	93
3.2.1. Pure Side Slip	96
3.2.2. Pure Longitudinal Slip	101
3.2.3. Interaction between Lateral and Longitudinal Slip	104
3.2.4. Camber and Turning (Spin)	118
3.3. The Tread Simulation Model	134
3.4. Application: Vehicle Stability at Braking up to Wheel Lock	148
4. Semi-Empirical Tyre Models	156
4.1. Introduction	156
4.2. The Similarity Method	157
4.2.1. Pure Slip Conditions	158
4.2.2. Combined Slip Conditions	164
4.2.3. Combined Slip Conditions with F_x as Input Variable	170

4.3.	The <i>Magic Formula</i> Tyre Model	172
4.3.1.	Model Description	173
4.3.2.	Full Set of Equations	184
4.3.3.	Extension of the Model for Turn Slip	191
4.3.4.	Ply-Steer and Conicity	198
4.3.5.	The Overturning Couple	203
4.3.6.	Comparison with Experimental Data for a Car Tyre and for a Truck Tyre	209
5.	Non-Steady-State Out-of-Plane String-Based Tyre Models	216
5.1.	Introduction	216
5.2.	Review of Earlier Research	217
5.3.	The Stretched String Model	219
5.3.1.	Model Development	221
5.3.2.	Step and Steady-State Response of the String Model	230
5.3.3.	Frequency Response Functions of the String Model	237
5.4.	Approximations and Other Models	245
5.4.1.	Approximate Models	246
5.4.2.	Other Models	261
5.5.	Tyre Inertia Effects	274
5.5.1.	First Approximation of Dynamic Influence (Gyroscopic Couple)	275
5.5.2.	Second Approximation of Dynamic Influence (First Harmonic)	276
5.6.	Side Force Response to Time-Varying Load	284
5.6.1.	String Model with Tread Elements Subjected to Load Variations	284
5.6.2.	Adapted Bare String Model	289
5.6.3.	Force and Moment Response	291
6.	Theory of the Wheel Shimmy Phenomenon	295
6.1.	Introduction	295
6.2.	The Simple Trailing Wheel System with Yaw Degree of Freedom	296
6.3.	Systems with Yaw and Lateral Degrees of Freedom	304
6.4.	Shimmy and Energy Flow	321
6.4.1.	Unstable Modes and the Energy Circle	321
6.4.2.	Transformation of Forward Motion Energy into Shimmy Energy	327
6.5.	Non-Linear Shimmy Oscillations	330

7. Single Contact Point Transient Tyre Models	339
7.1. Introduction	339
7.2. Model Development	340
7.2.1. Linear Model	340
7.2.2. Semi-Non-Linear Model	345
7.2.3. Fully Non-Linear Model	346
7.2.4. Non-Lagging Part	355
7.2.5. The Gyroscopic Couple	358
7.3. Enhanced Non-Linear Transient Tyre Model	359
8. Applications of Transient Tyre Models	364
8.1. Vehicle Response to Steer Angle Variations	364
8.2. Cornering on Undulated Roads	367
8.3. Longitudinal Force Response to Tyre Non-Uniformity, Axle Motions and Road Unevenness	375
8.3.1. Effective Rolling Radius Variations at Free Rolling	376
8.3.2. Computation of the Horizontal Longitudinal Force Response	380
8.3.3. Frequency Response to Vertical Axle Motions	3 84
8.3.4. Frequency Response to Radial Run-Out	386
8.4. Forced Steering Vibrations	389
8.4.1. Dynamics of the Unloaded System Excited by Wheel Unbalance	390
8.4.2. Dynamics of the Loaded System with Tyre Properties Included	391
8.5. ABS Braking on Undulated Road	395
8.5.1. In-Plane Model of Suspension and Wheel/Tyre Assembly	395
8.5.2. Anti-Lock Braking Algorithm and Simulation	400
8.6. Starting from Standstill	404
9. Short Wavelength Intermediate Frequency Tyre Model	412
9.1. Introduction	412
9.2. The Contact Patch Slip Model	414
9.2.1. Brush Model Non-Steady-State Behaviour	414
9.2.2. The Model Adapted to the Use of the <i>Magic Formula</i>	435
9.2.3. Parking Manoeuvres	447
9.3. Tyre Dynamics	452
9.3.1. Dynamic Equations	452
9.3.2. Constitutive Relations	461
9.4. Dynamic Tyre Model Performance	470
9.4.1. Dedicated Dynamic Test Facilities	470

9.4.2. Dynamic Tyre Simulation and Experimental Results	473
10. SWIFT and Road Unevennesses	483
10.1. Dynamic Tyre Response to Short Road Unevennesses	483
10.1.1. Tyre Envelopment Properties	483
10.1.2. The Effective Road Plane	486
10.1.3. The Two-Point Follower Technique	489
10.1.4. The Effective Rolling Radius when Rolling over a Cleat	495
10.1.5. Simulations and Experimental Evidence	499
10.1.6. Effective Road Plane and Road and Wheel Camber	505
10.2. Three Advanced Dynamic Tyre Models: <i>SWIFT</i> , <i>FTire</i> , <i>RMOD-K</i>	512
11. Motorcycle Dynamics	517
11.1. Introduction	517
11.2. Model Description	519
11.2.1. Geometry and Inertia	520
11.2.2. The Steer, Camber and Slip Angles	522
11.2.3. Air drag, Driving or Braking, Fore and Aft Load Transfer	525
11.2.4. Tyre Force and Moment Response	527
11.3. Linear Equations of Motion	532
11.4. Stability Analysis and Step Responses	540
11.5. Analysis of Steady-State Cornering	550
11.5.1. Linear Steady-State Theory	551
11.5.2. Non-Linear Analysis of Steady-State Cornering	568
11.5.3. Modes of Vibration at Large Lateral Accelerations	577
11.6. Motorcycle <i>Magic Formula</i> Tyre Model	578
11.6.1. Full Set of Tyre <i>Magic Formula</i> Equations	579
11.6.2. Measured and Computed Motorcycle Tyre Characteristics	583
12. Tyre steady-state and dynamic test facilities	586
References	595
List of Symbols	606
Appendix 1. Sign Conventions for Force and Moment and Wheel Slip	612
Appendix 2. <i>TreadSim</i>	613
Appendix 3. <i>SWIFT</i> Parameters	629
App. 3.1. Parameter Values of <i>Magic Formula</i> and <i>SWIFT</i> Model	629
App.3.2. Non-Dimensionalisation	630
App.3.3. Estimation of <i>SWIFT</i> Parameter Values	631
Index	637

Exercises

Exercise 1.1. Construction of effective axle characteristics at load transfer	14
Exercise 1.2. Four-wheel steer, condition that vehicle slip angle vanishes	36
Exercise 1.3. Construction of the complete handling diagram from pairs of axle characteristics	43
Exercise 1.4. Stability of a trailer	59
Exercise 2.1. Slip and rolling speed of a wheel steered about a vertical axis	73
Exercise 2.2. Slip and rolling speed of a wheel steered about an inclined axis (motorcycle)	74
Exercise 2.3. Partial differential equations with longitudinal slip included	84
Exercise 3.1. Characteristics of the brush model	117
Exercise 4.1. Assessment of off-nominal tyre side force characteristics and combined slip characteristics with F_x as input quantity	213
Exercise 4.2. Assessment of force and moment characteristics at pure and combined slip using the <i>Magic Formula</i> and the similarity method with K as input	214
Exercise 5.1. String model at steady turn slip	245
Exercise 6.1. Influence of the tyre inertia on the stability boundary	303
Exercise 6.2. Zero energy circle applied to the simple trailing wheel system	327
Exercise 7.1. Wheel subjected to camber, lateral and vertical axle oscillations	363
Exercise 8.1. Response to tyre stiffness variations	387
Exercise 8.2. Self-excited wheel hop	388
