Contents

Preface	xiii
Chapter 1. Introduction to minimax	1
1 Background and Notation	1
1.1 Linear Independence	5
1.2 Tangent Cone, Normal Cone and Epigraph	7
1.3 Subgradients and Subdifferentials of Convex Functions	7
2 Continuous Minimax	10
3 Optimality Conditions and Robustness of Minimax	11
3.1 The Haar Condition	13
4 Saddle Points and Saddle Point Conditions	15
References	17
Comments and Notes	18
Chapter 2. A survey of continuous minimax algorithms	23
1 Introduction	23
2 The Algorithm of Chaney	25
3 The Algorithm of Panin	30
4 The Algorithm of Kiwiel	31
References	33
Comments and Notes	34
Chapter 3. Algorithms for computing saddle points	37
1 Computation of Saddle Points	37
1.1 Saddle Point Equilibria	37
1.2 Solution of Systems of Equations	40
2 The Algorithms	42
2.1 A Gradient-based Algorithm for Unconstrained Saddle Points	42
2.2 Quadratic Approximation Algorithm for Constrained Minimax Saddle Points	44
2.3 Interior Point Saddle Point Algorithm for Constrained Problems	45
2.4 Quasi-Newton Algorithm for Nonlinear Systems	49
3 Global Convergence of Newton-type Algorithms	50
4 Achievement of Unit Stepsizes and Superlinear Convergence	54
5 Concluding Remarks	58
References	58
Comments and Notes	59

Chapter 4. A quasi-Newton algorithm for continuous minimax	63
1 Introduction	63
2 Basic Concepts and Definitions	66
3 The quasi-Newton Algorithm	70
4 Basic Convergence Results	76
5 Global Convergence and Local Convergence Rates	81
References	86
Appendix A: Implementation Issues	87
Appendix B: Motivation for the Search Direction d	90
Comments and Notes	91
Chapter 5. Numerical experiments with continuous minimax algorithms	93
1 Introduction	93
2 The Algorithms	94
2.1 Kiwiel's Algorithm	94
2.2 Quasi-Newton Methods	95
3 Implementation	96
3.1 Terminology	96
3.2 The Stopping Criterion	97
3.3 Evaluation of the Direction of Descent	97
4 Test Problems	98
5 Summary of the Results	110
5.1 Iterations when $(V_x f(x_k, y), d)$ a $-f$ is Satisfied	110
5.2 Calculation of Minimum-norm Subgradient	111
5.3 Superlinear Convergence	111
5.4 Termination Criterion and Accuracy of the Solution	112
References	119
Chapter 6. Minimax as a robust strategy for discrete rival scenarios	121
1 Introduction to Rival Models and Forecast Scenarios	121
2 The Discrete Minimax Problem	123
3 The Robust Character of the Discrete Minimax Strategy	125
3.1 Naive Minimax	125
3.2 Robustness of the Minimax Strategy	126
3.3 An Example	128
4 Augmented Lagrangians and Convexification of Discrete Minimax	132
References	137
Chapter 7. Discrete minimax algorithm for nonlinear equality and inequality constrained models	139
1 Introduction	139
2 Basic Concepts	141
3 The Discrete Minimax Algorithm	142
3.1 Inequality Constraints	142
3.2 Quadratic Programming Subproblem	143

3.3	Stepsize Strategy	144
3.4	The Algorithm	145
3.5	Basic Properties	147
4	Convergence of the Algorithm	152
5	Achievement of Unit Stepsizes	156
6	Superlinear Convergence Rates of the Algorithm	162
7	The Algorithm for Only Linear Constraints	172
	References	176
Chapter 8. A continuous minimax strategy for options hedging		179
1	Introduction	179
2	Options and the Hedging Problem	181
3	The Black and Scholes Option Pricing Model and Delta Hedging	183
4	Minimax Hedging Strategy	187
4.1	Minimax Problem Formulation	187
4.2	The Worst-case Scenario	188
4.3	The Hedging Error	189
4.4	The Objective Function	190
4.5	The Minimax Hedging Error	192
4.6	Transaction Costs	193
4.7	The Variants of the Minimax Hedging Strategy	194
4.8	The Minimax Solution	194
5	Simulation	196
5.1	Generation of Simulation Data	196
5.2	Setting Up and Winding Down the Hedge	198
5.3	Summary of Simulation Results	198
6	Illustrative Hedging Problem: A Limited Empirical Study	204
6.1	From Set-up to Wind-down	204
6.2	The Hedging Strategies Applied to 30 Options: Summary of Results	205
7	Multiperiod Minimax Hedging Strategies	207
7.1	Two-period Minimax Strategy	207
7.2	Variable Minimax Strategy	211
8	Simulation Study of the Performance of Different Multiperiod Strategies	213
8.1	The Simulation Structure	213
8.2	Results of the Simulation Study	214
8.3	Rank Ordering	214
9	CAPM-based Minimax Hedging Strategy	215
9.1	The Capital Asset Pricing Model	217
9.2	The CAPM-based Minimax Problem Formulation	218
9.3	The Objective Function	219
9.4	The Worst-case Scenario	221
10	Simulation Study of the Performance of CAPM Minimax	222
10.1	Generation of Simulation Data	222
10.2	Summary of Simulation Results	223
10.3	Rank Ordering	224
11	The Beta of the Hedge Portfolio for CAPM Minimax	226

12	Hedging Bond Options	226
12.1	European Bond Options	226
12.2	American Bond Options	229
13	Concluding Remarks	233
	References	235
	Appendix A: Weighting Hedge Recommendations, Variant B*	236
	Appendix B: Numerical Examples	237
	Comments and Notes	244
Chapter 9. Minimax and asset allocation problems		247
1	Introduction	247
2	Models for Asset Allocation Based on Minimax	249
2.1	Model 1: Rival Return Scenarios with Fixed Risk	250
2.2	Model 2: Rival Return with Risk Scenarios	250
2.3	Model 3: Rival Return Scenarios with Independent Rival Risk Scenarios	251
2.4	Model 4: Fixed Return with Rival Benchmark Risk Scenarios	251
2.5	Efficiency	252
3	Minimax Bond Portfolio Selection	252
3.1	The Single Model Problem	253
3.2	Application: Two Asset Allocations Using Different Models	254
3.3	Two-model Problem	256
3.4	Application: Simultaneous Optimization across Two Models	257
3.5	Backtesting the Performance of a Portfolio on the Minimax Frontier	258
4	Dual Benchmarking	261
4.1	Single Benchmark Tracking	261
4.2	Application: Tracking a Global Benchmark against Tracking LIBOR	264
4.3	Dual Benchmark Tracking	266
4.4	Application: Simultaneously Tracking the Global Benchmark and LIBOR	267
4.5	Performance of a Portfolio on the Dual Frontier	269
5	Other Minimax Strategies for Asset Allocation	271
5.1	Threshold Returns and Downside Risk	271
5.2	Further Minimax Index Tracking and Range Forecasts	273
6	Multistage Minimax Portfolio Selection	277
7	Portfolio Management Using Minimax and Options	284
8	Concluding Remarks	288
	References	289
	Comments and Notes	290
Chapter 10. Asset/liability management under uncertainty		291
1	Introduction	291
2	The Immunization Framework	296
2.1	Interest Rates	296
2.2	The Formulation	296

3	Illustration	300
4	The Asset/Liability (A/L) Risk in Immunization	303
5	The Continuous Minimax Directional Immunization	308
6	Other Immunization Strategies	309
6.1	Univariate Duration Model	309
6.2	Univariate Convexity Model	312
7	The Stochastic ALM Model 1	315
8	The Stochastic ALM Model 2	325
8.1	A Dynamic Multistage Recourse Stochastic ALM Model	325
8.2	The Minimax Formulation of the Stochastic ALM Model 2	330
8.3	A Practical Single-stage Minimax Formulation	333
9	Concluding Remarks	335
	References	335
	Comments and Notes	337
Chapter 11. Robust currency management		341
1	Introduction	341
2	Strategic Currency Management 1: Pure Currency Portfolios	345
3	Strategic Currency Management 2: Currency Overlay	351
4	A Generic Currency Model for Tactical Management	357
5	The Minimax Framework	359
5.1	Single Currency Framework	359
5.2	Single Currency Framework with Transaction Costs	362
5.3	Multicurrency Framework	363
5.4	Multicurrency Framework with Transaction Costs	365
5.5	Worst-case Scenario	367
5.6	A Momentum-based Minimax Strategy	369
5.7	A Risk-controlled Minimax Strategy	371
6	The Interplay between the Strategic Benchmark and Tactical Management	373
7	Currency Management Using Minimax and Options	374
8	Concluding Remarks	375
	References	376
	Appendix: Currency Forecasting	376
	Comments and Notes	378
