<i>List of Figures and Tables</i>	<i>vii</i>
<i>Acknowledgements</i>	<i>xv</i>
<i>List of Acronyms and Abbreviations</i>	<i>xvii</i>
Introduction	1
What works?	2
Towards which standard?	3
The challenge of climate change	3
The economic argument	4
A lack of research	5
Calculating CO ₂ emissions from buildings	7
Eco-minimalism	8
The low carbon renovation challenge	8
References	9
1 Airtightness: Reducing Energy Demand for Heating and Cooling	11
Where does air come in?	11
Conclusion	20
2 Insulation Materials	21
How insulation is described	21
Insulation materials	26
Conclusion	40
References	40
3 Insulation Strategies	41
The whole dwelling approach	41
Insulation element by element	48
Conclusion	80
References	80
4 Going All the Way: Towards Passivhaus	83
EST's Enhanced Construction Details	83
Passivhaus standard	86
The CarbonLite programme	92
The future	94
5 Windows and Doors	97
Doors	97
Windows	98

	Solar gain	98
	PVC or timber for frames and doors?	102
	Fitting windows and doors	102
6	Ventilation, Cooling and Heating	105
	Ventilation	106
	Passive cooling	109
	Heating	111
	References	126
7	Water Management	127
	Minimizing water use	128
	Appliances	133
	Reducing the carbon impact of water use	135
	Water re-use	139
	Conclusion	142
	References	142
8	Electricity Efficiency and Supply	143
	Energy efficiency: Invisible earnings	143
	Lighting	145
	Renewable electricity	150
	Conclusion	156
	References	157
9	Contextual Issues	159
	Supply chain	159
	Reducing waste when building and renovating	159
	Reference	168
