Preface	xv
Notations	xix
CHAPTER 1 A GENERAL INTRODUCTION TO PARAMETER ESTIMATION	1
1.1 System Identification-Parameter Estimation : why did it become important in measurement techniques	1
1.2 Steps in the identification process	2
1.2.1 Choice of the model set	2
1.2.2 Structure identification	4
1.2.3 Parameter estimation	5
1.2.4 Check of the residuals	5
1.2.5 Cross validation; consistency check	5
1.2.6 Conclusion	5
1.3 Parameter estimation, an example : measurement of a resistor	6
1.4 The ideal estimator	12
1.4.1 Unbiased estimators	12
1.4.2 Asymptotically unbiased and consistent estimators	13
1.4.3 Efficient estimators	15
1.4.4 Robust estimators	15
1.5 A statistical approach to the estimation problem	15
1.5.1 The Bayes estimator	16
1.5.2 The maximum likelihood estimator	21
1.5.3 The Markov estimator	28
1.5.4 The least squares estimator	29
1.6 Summary	29
CHAPTER 2 A REVIEW OF ESTIMATION METHODS AND THEIR APPLICATIONS	31
2.1 Introduction	31
2.2 Motives in focusing on the least squares technique	32
2.3 Parametric models / non-paramteric models	33
2.3.1 The Wiener Hopf equation	34
2.3.2 Deconvolution of the Wiener-Hopf equation in the time domain	37

2.3.3	Deconvolution of the Wiener-Hopf equation in the frequency domain	38
2.4	Parametric models	39
2.4.1	Models linear-in-the-parameters	39
2.4.2	Solving the set of normal equations using singular value decomposition	43
2.4.3	Models non-linear-in-the-parameters	44
2.5	Time domain versus frequency domain	50
2.5.1	Identification in the time domain	53
2.5.2	Identification in the frequency domain	55
2.5.3	Recursive identification techniques	60
2.6	Errors due to noise on the independent variables	65
2.7	Summary	68

CHAPTER 3	A MAXIMUM LIKELIHOOD ESTIMATOR FOR LINEAR TIME INVARIANT SYSTEMS	69
-----------	---	----

3.1	Introduction	69
3.2	Measurement of a resistance	74
3.3	Estimation of transfer functions : a practical approach	78
3.3.1	Introduction	78
3.3.2	The maximum likelihood equations	79
3.3.3	The estimation algorithm	83
3.3.4	The Cramere-Rao lower bound of the estimates	85
3.3.5	Expression for the influence of the noise on the estimates	88
3.3.6	The covariance matrix of the Gaussian MLE	89
3.3.7	Formulation of the estimator with complex numbers	89
3.4	Estimation of transfer functions : a theoretical approach	90
3.4.1	Introduction	90
3.4.2	Consistency : basic results in the frequency domain	92
3.4.3	Consistency : extensions to the time domain	97
3.4.4	Asymptotic normality and bias	101
3.4.5	Asymptotic efficiency	103
3.5	Comparison with other methods	106
3.5.1	Methods based on models with either process noise or output noise	106
3.5.2	Methods based on errors-in-variables models	107
3.6	Numerical considerations	109
3.7	Simulations	113
3.7.1	Introduction	113
3.7.2	A zero order transfer function	114
3.7.3	Examples of discrete time systems	117
3.7.4	Examples of continuous time systems	122

3.8	Extensions of the model	124
3.8.1	The input signal is corrupted with noise	124
3.8.2	Feedback systems	126
3.9	Application of ELiS to experimental data	- 127
3.10	Conclusions	131
	Appendix to Chapter 3	132
CHAPTER 4 DESIGN OF EXCITATION SIGNALS		143
4.1	Introduction	143
4.2	Optimization of the time domain behaviour of excitation signals	149
4.2.1	Introduction	149
4.2.2	Study of the signals	154
4.2.3	Discussion	165
4.2.4	Experimental verification	165
4.2.5	Study of the influence of non-linear distortions	168
4.2.6	The use of the multisine signal with ELiS	173
4.2.7	Conclusions	174
4.3	Optimizing the frequency domain behaviour of excitation signals : design of optimized power spectra	175
4.3.1	Introduction	175
4.3.2	General aspects of the optimization of the determinant of the information matrix	176
4.3.3	The dispersion functions	176
4.3.4	An efficient algorithm for maximizing the information matrix	178
4.3.5	Example	179
4.3.6	Conclusions	184
4.4	Summary	185
	Appendix 1 : Crest factor minimization of multisines	186
	Appendix 2 : Interpretation of the dispersion function	189
CHAPTER 5 MODEL SELECTION		193
5.1	Introduction	193
5.2	Verification of model validity	194
5.3	Influence of selecting an over-complex model	195
5.3-1	Influence of the number of unknown parameters on the covariance matrix	195
5.3-2	Models with common pole/zero pairs	196
5.4	Introduction of the model complexity in the cost function	201
5.5	Study of the influence of model errors on the behaviour of the cost function	203

IDENTIFICATION OF LINEAR SYSTEMS

5.5.1 Study of the mean value of K	203
5.5.2 Study of the standard deviation of K	206
5.5.3 Interpretation of the model error contribution	206
5.6 Optimal experiment strategy	207
5.6.1 Combining many experiments	207
5.6.2 Influence of the number of frequencies	209
5.7 Examples	210
5.7.1 Simulations	210
5.7.2 Model selection for flutter analysis	213
CHAPTER 6 ESTIMATION OF LINEAR TIME INVARIANT SYSTEMS WITH DELAY	221
6.1 Introduction	221
6.2 The estimation algorithm and its properties	223
6.3 Simulations	225
6.4 Conclusion	228
CHAPTER 7 PHASE CORRECTION OF LINEAR TIME INVARIANT SYSTEMS WITH DIGITAL ALLPASS FILTERS	231
7.1 Introduction	231
7.2 Phase distortion	232
7.3 The phase correction algorithm	234
7.4 Optimization strategy	235
7.5 Comparison with existing methods	238
7.6 Noise sensitivity	243
7.7 Experimental results	245
7.8 Conclusion	246
Appendix to Chapter 7	247
CHAPTER 8 APPLICATION OF ELIS TO MEASUREMENT PROBLEMS	249
8.1 Introduction	249
8.2 Modal analysis	250
8.3 Flight flutter data analysis	263
8.4 Time domain reflectometry	268
8.5 Electrical machines	274
8.6 Equalization of a data acquisition channel	280
8.7 Design of digital differentiators and integrators	290
8.8 Conclusion	302
Appendix to Chapter 8	303

TABLE OF CONTENTS
