

# **GENERAL RELATIVITY**

**Robert M. Wald**

**The University of Chicago Press  
Chicago and London**

# CONTENTS

<b>Preface</b>	ix
<b>Notation and Conventions</b>	xi
<b>PART I. FUNDAMENTALS</b>	
<b>1. Introduction</b>	<b>3</b>
1.1 Introduction	3
1.2 Space and Time in Prerelativity Physics and in Special Relativity	4
1.3 The Spacetime Metric	6
1.4 General Relativity	8
<b>2. Manifolds and Tensor Fields</b>	<b>11</b>
2.1 Manifolds	11
2.2 Vectors	14
2.3 Tensors; the Metric Tensor	18
2.4 The Abstract Index Notation	23
<b>3. Curvature</b>	<b>29</b>
3.1 Derivative Operators and Parallel Transport	30
3.2 Curvature	36
3.3 Geodesics	41
3.4 Methods for Computing Curvature	47
<b>4. Einstein's Equation</b>	<b>55</b>
4.1 The Geometry of Space in Prerelativity Physics; General and Special Covariance	55
4.2 Special Relativity	59
4.3 General Relativity	66
4.4 Linearized Gravity: The Newtonian Limit and Gravitational Radiation	74
<b>5. Homogeneous, Isotropic Cosmology</b>	<b>91</b>
5.1 Homogeneity and Isotropy	91
5.2 Dynamics of a Homogeneous, Isotropic Universe	96

5.3	The Cosmological Redshift; Horizons	101
5.4	The Evolution of Our Universe	107
<b>6.</b>	<b>The Schwarzschild Solution</b>	<b>118</b>
6.1	Derivation of the Schwarzschild Solution	119
6.2	Interior Solutions	125
6.3	Geodesics of Schwarzschild: Gravitational Redshift, Perihelion Precession, Bending of Light, and Time Delay	136
6.4	The Kruskal Extension	148
PART II. ADVANCED TOPICS		
<b>7.</b>	<b>Methods for Solving Einstein's Equation</b>	<b>161</b>
7.1	Stationary, Axisymmetric Solutions	162
7.2	Spatially Homogeneous Cosmologies	168
7.3	Algebraically Special Solutions	179
7.4	Methods for Generating Solutions	180
7.5	Perturbations	183
<b>8.</b>	<b>Causal Structure</b>	<b>188</b>
8.1	Futures and Pasts: Basic Definitions and Results	189
8.2	Causality Conditions	195
8.3	Domains of Dependence; Global Hyperbolicity	200
<b>9.</b>	<b>Singularities</b>	<b>211</b>
9.1	What Is a Singularity?	212
9.2	Timelike and Null Geodesic Congruences	216
9.3	Conjugate Points	223
9.4	Existence of Maximum Length Curves	233
9.5	Singularity Theorems	237
<b>10.</b>	<b>The Initial Value Formulation</b>	<b>243</b>
10.1	Initial Value Formulation for Particles and Fields	244
10.2	Initial Value Formulation of General Relativity	252
<b>11.</b>	<b>Asymptotic Flatness</b>	<b>269</b>
11.1	Conformal Infinity	271
11.2	Energy	285
<b>12.</b>	<b>Black Holes</b>	<b>298</b>
12.1	Black Holes and the Cosmic Censor Conjecture	299
12.2	General Properties of Black Holes	308
12.3	The Charged Kerr Black Holes	312
12.4	Energy Extraction from Black Holes	324
12.5	Black Holes and Thermodynamics	330
<b>13.</b>	<b>Spinors</b>	<b>340</b>
13.1	Spinors in Minkowski Spacetime	342
13.2	Spinors in Curved Spacetime	359

<b>14. Quantum Effects in Strong Gravitational Fields</b>	<b>378</b>
14.1 Quantum Gravity	380
14.2 Quantum Fields in Curved Spacetime	389
14.3 Particle Creation near Black Holes	399
14.4 Black Hole Thermodynamics	416
<b>APPENDICES</b>	
<b>A. Topological Spaces</b>	<b>423</b>
<b>B. Differential Forms, Integration, and Frobenius's Theorem</b>	<b>428</b>
B.1 Differential Forms	428
B.2 Integration	429
B.3 Frobenius's Theorem	434
<b>C. Maps of Manifolds, Lie Derivatives, and Killing Fields</b>	<b>437</b>
C.1 Maps of Manifolds	437
C.2 Lie Derivatives	439
C.3 Killing Vector Fields	441
<b>D. Conformal Transformations</b>	<b>445</b>
<b>E. Lagrangian and Hamiltonian Formulations of Einstein's Equation</b>	<b>450</b>
E.1 Lagrangian Formulation	450
E.2 Hamiltonian Formulation	459
<b>F. Units and Dimensions</b>	<b>470</b>
<b>References</b>	<b>473</b>
<b>Index</b>	<b>485</b>
