Stefan Helber

# Performance Analysis of Row Lines with Non-Linear Row of Material

Springer

# Table of Contents

**1. Introduction** . . . . . 1

**2. Issues, Goals, and Methods of Flow Line Analysis** . . . . . 3
2.1 Variability and the Performance of Flow Lines . . . . . 3
2.2 Non-Linearities in the Flow of Material . . . . . 6
2.2.1 Assembly and Disassembly Operations . . . . . 6
2.2.2 Split and Merge Operations and Rework Loops . . . . . 8
2.3 Economic Design Problems in Flow Line Analysis . . . . . 10
2.3.1 Cash-Flow Oriented Machine Selection and Buffer Allocation . . . . . 11
2.3.2 Cash-Flow Oriented Buffer Allocation for a Given Set of Machines . . . . . 20
2.4 Methods of Performance Analysis . . . . . 22
2.5 Two-Machine Decomposition of Flow Lines . . . . . 25
2.6 Review of the Literature . . . . . 27

**3. Assembly/Disassembly Systems with Random Processing Times** . . . . . 35
3.1 Discrete and Continuous Time Models . . . . . 35
3.2 Exact Solution of a Two-Machine Subsystem . . . . . 38
3.2.1 Performance Measures . . . . . 40
3.2.2 Derivation of the Transition Equations . . . . . 41
3.2.3 Identities . . . . . 46
3.2.4 Derivation of the Solution . . . . . 47
3.2.5 The Algorithm to Determine Steady-State Probabilities and Performance Measures . . . . . 53
3.2.6 Determination of Performance Measures without Explicit Computation of all Steady-State Probabilities... 53
3.2.7 Numerical Results for the Two-Machine Systems . . . . . 56
3.3 Decomposition Equations for Assembly/Disassembly Systems 60
3.3.1 Conservation of Flow Equation . . . . . 60
3.3.2 Flow Rate-Idle Time Equations . . . . . 61
3.3.3 Resumption of Flow Equations . . . . . 64
3.3.4 Interruption of Flow Equations . . . . . 66

3.3.5 Simultaneous Solution of the Decomposition Equations 71
3.3.6 Comparison with Jeong and Kim's Decomposition Equations for the Continuous Time Case . . . 72
3.4 Two Algorithms to Determine Performance Measures . . . 74
3.5 Numerical Results . . . 76
3.5.1 Behavior of the Algorithm . . . 76
3.5.2 Behavior of Assembly/Disassembly Systems . . . 82
3.6 Optimal Design of Assembly/Disassembly Systems . . . 86

**4. Flow Lines with Rework Loops and Identical Processing Times . . . 89**
4.1 Discrete-Material Flow Line Model with Identical Deterministic Processing Times . . . 89
4.2 Decomposition Equations for Loops and Identical Processing Times . . . 91
4.2.1 Conservation of Flow Equation . . . 91
4.2.2 Flow Rate-Idle Time Equations . . . 92
4.2.3 Resumption of Flow Equations I: Split Operations . . . . 95
4.2.4 Resumption of Flow Equations II: Merge Operations . . 101
4.2.5 Boundary Equations . . . 105
4.2.6 Simultaneous Solution of the Decomposition Equations 105
4.3 The Algorithm to Determine Performance Measures . . . 106
4.3.1 Purpose, Background, and Basic Structure of the Algorithm . . . 106
4.3.2 Determination of the Evaluation Sequence . . . 107
4.3.3 Initialization . . . 108
4.3.4 Iterative Solution of the Decomposition Equations . . . . 109
4.3.5 General Comments on Implementation and Algorithm Behavior . . . 114
4.4 Numerical Results: Algorithm and Flow Line Behavior . . . 114
4.4.1 Introduction into the Numerical Study . . . 114
4.4.2 Pure Split Structures . . . 116
4.4.3 Pure Merge Networks . . . 126
4.4.4 Structures with Loops . . . 134
4.4.5 Summary of the Numerical Results . . . 159
4.5 Optimal Design of Systems with Loops and Identical Processing Times . . . 159
4.5.1 Impact of the Acceptance Probability at the Quality Inspection Station . . . 160
4.5.2 Impact of the Placement of the Inspection Station . . . . 163

**5. Flow Lines with Rework Loops and Machine-Specific Processing Times . . . 165**
5.1 Continuous-Material Flow Line Model with Machine-Specific Processing Times . . . 165

5.2 Decomposition Equations for Loops and Different Processing Times . . . 167
5.2.1 Conservation of Flow Equation . . . 168
5.2.2 Flow Rate-Idle Time Equations . . . 168
5.2.3 Resumption of Flow Equations I: Split Operations . . . . 169
5.2.4 Resumption of Flow Equations II: Merge Operations .. 173
5.2.5 Interruption of Flow Equations I: Split Operations . . . . 176
5.2.6 Interruption of Flow Equations II: Merge Operations.. 177
5.2.7 Simultaneous Solution of the Decomposition Equations 180
5.3 The Algorithm to Determine Performance Measures . . . 181
5.4 Numerical Results: Algorithm and Flow Line Behavior . . . 183
5.5 Optimal Design of Systems with Loops and Different Processing Times . . . 190

**6. Conclusions and Suggestions for Further Research . . . 195**

**A. Derivation for the Discrete Material Flow Line . . . 199**
A.I Resumption of Flow Equations: Split System . . . 199
A.1.1 Upstream Machine . . . 199
A.1.2 Downstream Machine . . . 211
A.2 Resumption of Flow Equations: Merge System . . . 213
A.2.1 Upstream Machine . . . 213
A.2.2 Downstream Machine in the Priority Two Line . . . 215

**B. Derivation for the Continuous Material Flow Line . . . 225**
B.I Resumption of Flow Equations: Split System . . . 225
B.I.I Upstream Machine . . . 225
B.I.2 Downstream Machine . . . 228
B.2 Resumption of Flow Equations: Merge System . . . 230
B.2.1 Upstream Machine . . . 230
B.2.2 Downstream Machine in the Priority Two Line . . . 231
B.3 Interruption of Flow Equations: Upstream Machine of a Split System . . . 246
B.4 Interruption of Flow Equations: Merge System . . . 254
B.4.1 Upstream Machine . . . 254
B.4.2 Downstream Machine of the Priority Two Line . . . 264

**Glossary of Notation . . . 273**

**Bibliography . . . 275**
