CONTENTS

<i>Preface</i>	xiii
I An overview of transportation activities in the United States	1
Introduction	1
Transportation and the economy	2
Passenger and freight movements in the United States	5
Transportation networks and performance	7
Transportation issues for the millennium	13
Notes	16
2 The statistical analysis of economic relations	17
Introduction	17
Economic models of behavior	17
Econometric models of economic behavior	19
Least-squares regression	21
Chapter highlights	40
Review questions	41
Appendix: percentage points of the t-distribution	45
Notes	46
References and related readings	46
3 Transportation demand - the divisible goods case	47
Introduction	47
Assumptions underlying a theory of consumer demands	47
Budget constraint	51

Consumer equilibrium
Market demand for transportation
Demand for transportation - estimation
Case, study - the demand for gasoline, regulation, and automobile travel
Case study - the demand for urban rail rapid transit
Case study - the demand for short-haul air service
Chapter highlights
Review questions
Notes
References and related readings

Transportation demand - the discrete good case

Introduction
Individual demand functions
Market demand and consumption at the extensive margin
Transportation choice demand - estimation
Case study - a binary logit model of urban transportation mode choice
The multinomial logit model of transportation choice
Case study - intercity demand for travel
Case study — household demand for vehicle ownership
Case study - the introduction of a new alternative
Case study - the demand for freight transport carriers
Chapter highlights
Review questions
Notes
References and related readings

Firm production and cost in transportation - the long run

Introduction
The long run - all inputs variable
The long-run market supply function
Estimating long-run cost functions
Intercity freight movements in the United States
Motor carrier costs and production technology under regulation
Case study - regulated truckload carriers
Case study — regulated general freight carriers
Case study - airline cost and production under regulation
Chapter highlights
Review questions
Appendix: cost function estimation
Notes
References and related readings

6 Firm production and cost in transportation - the short run	214
Introduction	214
Short run - level of capital fixed	214
The short-run market supply function	216
<i>Case study - short-run variable costs in the railroad industry under regulation</i>	219
<i>Case study - profit margins in the airline industry</i>	225
The relationship between short-run and long-run costs	228
<i>Case study - urban bus transportation cost and production</i>	230
Chapter highlights	236
Review questions	237
Notes	241
References and related readings	242
7 Competition, concentration, and market power in transportation	244
Introduction	244
Perfectly competitive market structure	245
Transportation as a derived demand	251
<i>Case study - an empirical model of interregional freight flows</i>	255
The spectrum of market structures	258
Monopoly markets	260
Measuring market concentration	274
<i>Case study - concentration in the LTL motor carrier sector</i>	275
<i>Case study - concentration in the US airline industry</i>	276
<i>Case study - contestable market theory: actual versus potential competition</i>	278
Monopoly rents in the motor carrier industry	284
<i>Case study - motor carrier firm rents</i>	284
<i>Case study - monopoly rent-sharing in the motor carrier industry</i>	286
Market power, shipping cartels, and the Shipping Act of 1984	290
<i>Case study - the economic effect of the Shipping Act of 1984</i>	292
Chapter highlights	296
Review questions	298
Notes	302
References and related readings	306
8 Regulation, deregulation, and efficiency in transportation	308
Introduction	308
<i>Case study - deregulation and strategic behavior in the airline industry</i>	308
Mergers in transportation	319
<i>Case study - estimating the benefits from mergers: Republic Airlines</i>	320
<i>Case study - mergers and consumer prices</i>	324

Efficiency losses from market price controls	326
Truck-rail equilibrium in regulated and competitive markets	328
<i>Case study - market equilibrium during price-controlled regulation</i>	329
<i>Case study - an overview of economic deregulation in transportation</i>	339
Chapter highlights	345
Review questions	346
Notes	350
References and related readings	352
9 Transportation investment	355
Introduction	355
Firm investment behavior	356
<i>Case study ~ the value of motor carrier operating certificates under regulation</i>	368
<i>Case study - the value of taxi medallions</i>	369
Efficient pricing and investment	370
<i>Case study - optimal pricing and investment in urban bus transit systems</i>	372
<i>Case study - optimal pricing and investment in rail transport</i>	374
Chapter highlights	379
Review questions	380
Appendix	383
Notes	384
References and related readings	386
10 Welfare effects of public-sector pricing and investment	387
Introduction	387
First-best pricing with fixed capacity	388
First-best pricing and investment - constant-cost environment	392
<i>Case study - efficient pricing and investment in highway infrastructure</i>	393
<i>Case study - welfare effects of first-best pricing and investment in highway capacity</i>	403
<i>Case study - welfare effects of first-best pricing in airport infrastructure</i>	407
First-best pricing and investment - decreasing-cost environment	411
<i>Case study - Are Amtrak benefits worth the costs?</i>	414
Pricing, investment, and a zero-profit constraint	423
<i>Case study - pricing urban transit under a zero-profit constraint</i>	429
<i>Case study - setting airplane landing fees under a zero-profit constraint</i>	432
Chapter highlights	436
Review questions	437
Appendix	441
Notes	441
References and related readings	443
11 Congestion pricing	447
Introduction	447
Congestion with fixed capacity	447

Congestion with optimal capacity	457
<i>Case study - the incidence of traffic congestion in US cities</i>	461
The relationship between travel speed, traffic flow, and user costs	464
<i>Case study - a speed-flow curve for the San Francisco Bay Area</i>	465
<i>Case study - optimal congestion charges in the San Francisco Bay Area</i>	467
The effects of congestion charges on metropolitan travel decisions	476
<i>Case study - the effect of congestion pricing on generalized costs</i>	477
<i>Case study - toward a feasible policy of road pricing: Los Angeles</i>	484
<i>Case study - optimal congestion charges for runway space</i>	488
Chapter highlights	491
Review questions	493
Notes	499
References and related readings	501
12 Transportation and land use in urban areas	504
Introduction	504
Firm location decisions	505
Household location decisions	509
Land-use allocation in a monocentric city	513
<i>Case study — population and employment densities in the Boston area</i>	514
<i>Case study - testing the equilibrium location condition</i>	519
Transportation and land-use allocation in a monocentric city	524
The multicentric pattern of urban development	526
<i>Case study - subcenters and commuter flows in the Los Angeles Metropolitan Area (LAMA)</i>	527
<i>Case study - intraurban wage functions in Chicago</i>	532
<i>Case study - congestion and metropolitan development</i>	536
Empirical models of firm and household location	540
<i>Case study -firm decisions to relocate in metropolitan areas</i>	540
<i>Case study - transportation policy, household decisions, and urban development</i>	544
<i>Case study - information technology and urban development</i>	549
Chapter highlights	553
Review questions	554
Notes	558
References and related readings	561
13 Public health effects of transportation	563
Introduction	563
Transport safety in the United States	564
The markets for safety-differentiated trips	566
<i>Case study - seat belt use and the demand for safer trips</i>	568
Safety regulation in transportation	570
Highway safety behavior and regulation	573
<i>Case study - the effects of CAFE on highway safety</i>	576
<i>Case study - highway speeds and speed variance</i>	580

Highway safety and risk compensation	582
<i>Case study - airbags</i>	586
Firm profitability and safety	588
<i>Case study - airline safety and profitability</i>	589
<i>Case study - new entrants and airline safety</i>	591
<i>Case study - unintended safety effects from economic deregulation</i>	594
Public health effects of motor vehicle emissions	595
Chapter highlights	599
Review questions	601
Notes	605
References and related readings	606
Appendix Transportation resources on the Internet	609
<i>Index</i>	613
