

Domestic Transferable Permits for Environmental Management

DESIGN AND IMPLEMENTATION

OECD

ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT

Table of contents

Introduction	7
Chapter 1. Origins, Aims and Approaches	11
Brief Historical Overview.....	11
Aims and Expected Benefits.....	13
Basic Definitions and Concepts.....	17
Chapter 2. Key Variables in the Design of a Transferable Permits System	23
Aims and Basic Characteristics of the System.....	23
Design Options for the System.....	33
Means of Application.....	49
Two Examples of Transferable Permit Programmes.....	52
Chapter 3. Implementation Issues and Constraints	55
Issues Relating to Competitiveness and Market Power.....	55
Issues Relating to Compatibility with Institutional Framework for Public Policies and with Existing Instruments.....	64
Issues Relating to Distributive Aspects.....	69
Issues Relating to Social Impacts and Political Acceptability.....	75
Chapter 4. Making an Informed Decision to Introduce transferable Permits	83
The Nature of the Problem.....	83
The Existing Institutional Context	86
Favourable Economic Circumstances.....	87
Incentive Taxes, Financial Mechanisms or Tradable Permits?.....	90
Chapter 5. Directions for the Development of a Transferable Permits System	93
Strategic Directions for Determining the Nature of Transferable Permit Systems.....	93
The Process of Designing and Introducing Transferable Permits.....	97
Conclusion.....	107
Bibliography.....	109

List of Boxes

1	Impact of Asymmetries on Tax Treatment.....	15
2	The Netting Programme in the United States.....	2)
3	Attempts to Regulate Overfishing.....	25
4	Setting Quotas in Absolute or Relative Terms to Regulate Overfishing.....	26
5	Impact of Targets in Relative Units on Uncertainty of Emission Levels.....	27
6	Duration of Permits and Fisheries Regulation.....	27
7	The Geographical Dimension of Using TPs to Combat Acid Rain.....	30
8	Voluntary Participation in the Acid Rain Program.....	33
9	Auctioning Techniques.....	36
10	The Preference for Internal Transfers as Shown by the US Experience.....	43
11	The US System of Offsets.....	45
12	Forward Transactions in the Acid Rain Program.....	46
13	Impacts of Free Versus Charged Allocation of TPs on Products Costs.....	58
14	A Case where it may be Economically Advantageous to Choose Non-Transferable Quotas.....	62
15	Distribution of Additional Permits to Secure Approval for a TP Programme.....	76
16	The Controversy over Acquired Rights.....	77
17	Thermal Pollution of Rivers.....	85
18	The First Phase of US Experience Prior to 1990.....	87
19	A Few Examples of the Concerns of the Actors Involved in Choosing a Policy Instrument.....	98
20	What the Various Actors Found in the Acid Rain Program Adopted in the United States in 1990.....	99

List of Tables

1	Credits, Quotas, Averaging and New Rights.....	19
2	Combinations of User Rights and Transfer Rights Options.....	28
3	A Summary Comparison of the Acid Rain Programme and the RECLAIM Programme.....	53
4	Options for the Introduction of Transferable Permits.....	87

List of Figures

1	50 percent Reduction in Emissions (after Codard and Henry, 1998).....	15
2	The Impact of Differences of Taxation of Inputs Linked to Emissions.....	16
3	Possible Distortion of Optimal Cap when the Permit Market is Open to Non-Users.....	32
4	Smoothing Emission Reductions Subject to Ceilings PI, P2 and P3 over Several Periods.....	41
5	Allocative and Distributive Effects in a Trading Economy.....	72
6	Distributive Effects of TPs at the Level of Local Competition.....	73
7	Uncertainty Effect Related to the Marginal Cost of Pollution Reduction.....	89
