1. Introduction	1
2. The Modeling of Transport in International Trade Theory	4
2.1 The modeling of transport: a special case?	4
2.2 The 'iceberg' approach (Samuelson-Mundell model)	5
2.3 Transport as a separate sector	6
2.4 Which modeling is to be chosen?	9
2.5 Conclusions	10
Appendix 2.1: The iceberg assumption for linear demand relationships	11
3. Transport in Traditional Trade Theory	13
3.1 The basic model	13
3.2 Partial equilibrium analysis	13
3.3 General equilibrium analysis	15
3.4 Modifications when transport is a separate sector	20
3.5 The impacts of transport policy and technological change	34
3.6 Conclusions	39
Appendix 3.1: Welfare analysis for different transport capital intensities	42
4. Transport in New Trade Theories	45
4.1 New trade theories and transport modeling	45
4.2 Neo-Heckscher-Ohlin theories	46
4.3 Monopolistic competition	49
4.4 Oligopoly and international transport cost	55
4.5 Multinationals	56
4.6 Transport as a separate sector	58
4.7 Conclusions	60

5. Transport in Economic Geography	64
5.1 Integrating trade and location theory: economic geography	64
5.2 Location rent	65
5.3 Central place	66
5.4 Gravity	68
5.5 Circularity	69
5.6 Local external economies	69
5.7 Monopolistic competition models of economic geography	70
5.8 Conclusions	73
6. Foreign Trade and Spatial Preferences	75
6.1 Introduction	75
6.2 Altruism and spatial discounting	76
6.3 Spatial discounting ¹ and transport in partial equilibrium	79
6.4 Spatial discounting and transport in general equilibrium	81
6.5 Empirical analysis of the transport and spatial discounting distance trade-off	86
6.6 Conclusions	95
Appendix 6.1: Questionnaire	97
7. Foreign Trade and Transport Cost Internalization	110
7.1 Introduction	110
7.2 Model structure	113
7.3 Data	116
7.4 Simulations	117
7.5 Sensitivity analysis	121
7.6 Conclusions	123
Appendix 7.1: Transport intensity of foreign trade to and from Austria	125
8. Conclusions	130
