Contents

1	Introduction	1
2	The French and the German education systems	7
2.1	Administration of the education system	8
2.1.1	Distribution of responsibilities	8
2.1.2	Funding of education	10
2.2	Organisation of the educational career	11
2.2.1	Pre-primary and primary education	12
2.2.2	Secondary education	15
2.2.3	Initial vocational qualification	19
2.2.4	Tertiary education	23
2.3	Comparing educational attainment	27
2.3.1	The data	28
2.3.2	Typology of educational attainment	30
2.4	Summary and conclusions	33
3	Educational attainment in France and Germany	37
3.1	Distribution of educational attainment	40
3.1.1	Attainment in general secondary education	42
3.1.2	Final educational attainment	46
3.2	Determinants of the level of education: overview of the literature	54
3.2.1	Modelling strategies	54
3.2.2	Evidence for France and Germany	57
3.3	Determinants of final educational attainment	59
3.3.1	Formulation of the model	59
3.3.2	Data and variables	64
3.3.3	Estimation results	67
3.4	Decomposition of the educational career	73
3.4.1	Formulation of the model	73
3.4.2	Data and variables	76

3.4.3	Determinants of secondary education	79
3.4.4	Determinants of post-secondary education	83
3.5	Summary and conclusions	90
4	Education and unemployment in France and Germany	95
4.1	Education and unemployment: overview of the literature	98
4.1.1	Theoretical background	98
4.1.2	Empirical findings	101
4.2	Unemployment, non-employment and employment	105
4.2.1	Data and definition of the employment status	106
4.2.2	Unemployment rates	109
4.2.3	Non-employment rates	111
4.2.4	Employment rates	114
4.3	Modelling framework	117
4.3.1	A discrete time competing risks hazard rate model	117
4.3.2	Formal presentation of the model: basic concepts	119
4.3.3	Further specification choices	124
4.4	Data and variables	129
4.4.1	Construction of the spell data	129
4.4.2	Explanatory variables	132
4.5	Education and risk of entering unemployment	136
4.5.1	Estimation results	136
4.5.2	Expected monthly hazard of entering unemployment . . .	141
4.5.3	Expected risk of experiencing unemployment at least once within a given period	144
4.6	Education and duration of unemployment episodes	146
4.6.1	Estimation results	146
4.6.2	Expected monthly hazard of reemployment	151
4.6.3	Expected duration of unemployment spells	153
4.7	Education and total unemployment risk	156
4.7.1	Multiple unemployment spells and total unemployment risk	157
4.7.2	Concentration of the unemployment problem	161
4.8	Summary and conclusions	162
5	Education and earnings in France and Germany	167
5.1	Education and earnings: overview of the literature	170
5.1.1	Theoretical and empirical background	170
5.1.2	Empirical evidence for France and Germany	171
5.2	Distribution of earnings	175
5.2.1	Structure by education	178
5.2.2	Gender differences	179
5.3	Modelling framework	182
5.3.1	A sample selection model	182

5.3.2	Modelling the effect of education on residual earnings dispersion	185
5.4	Data and variables	188
5.5	Selectivity into paid employment	191
5.5.1	Specification tests	192
5.5.2	Impact of education and gender on the selection into paid employment	194
5.5.3	Presence and impact of selectivity	198
5.6	The earnings premium for education	200
5.6.1	Tests and estimation results	200
5.6.2	Effect of education on earnings level	204
5.6.3	Effect of education on unexplained earnings dispersion	210
5.7	Summary and conclusions	215
6	Conclusion	219
	Appendix	229
A	Glossary	231
B	Further tables for chapter 3	235
C	Further tables and figures for chapter 4	245
D	Further tables and figures for chapter 5	259
	List of figures	269
	List of tables	273
	References	277
