

Economics of Environmental Conservation, Second Edition

Clement A. Tisdell

*Professor of Economics, School of Economics, The University
of Queensland, Australia*

Edward Elgar

Cheltenham, UK • Northampton, MA, USA

Contents

<i>List of figures</i>	x
<i>List of tables</i>	xv
<i>Preface to the second edition</i>	xvi
<i>Preface to the first edition</i>	xviii
1. Economics and the living environment	1
1.1 Introduction	1
1.2 Welfare economics, environment and the biosphere	2
1.3 Ethics, values and environmental economics: alternative views	j 7
1.4 Economic growth, dynamics, uncertainty and the environment: differing views	12
1.5 Uncertainty, welfare and environmental issues	19
1.6 Conclusion	20
2. Global conservation strategies and concerns	25
2.1 Introduction	25
2.2 A classification of conservation policies	26
2.3 The <i>World Conservation Strategy</i> and <i>Caring for the Earth</i> : origins, aims and basic principles	30
2.4 Ecological processes and life-support systems: agriculture, forests, marine and freshwater systems	33
2.5 Preservation of genetic diversity	38
2.6 Sustainable utilisation of species and ecosystems	41
2.7 Significant differences between <i>Caring for the Earth</i> and the <i>World Conservation Strategy</i>	44
2.8 International conservation concerns and priorities	47
2.9 (Concluding comments)	49
3. Markets and government intervention in environmental conservation	52
3.1 Introduction - choices about resource use and conservation	52
3.2 Market efficiency and externalities	56
3.3 Government policies 'to correct' for externalities	65

3.4	Public or collective good characteristics associated with the conservation of nature	70
3.5	Option demands, transaction costs, more on existence values, bequest, irreversibility and uncertainty	73
3.6	Discount rates as grounds for government intervention	75
3.7	Monopolies and conservation	76
3.8	Common-property and intervention	78
3.9	Failure of political and administrative mechanisms in relation to conservation	79
3.10	Concluding comment	81
4.	Environmental conservation in developing countries	84
4.1	Introduction	84
4.2	Basic conservation problems in the Third World: origin	85
4.3	Population growth and income aspirations	86
4.4	Expansion of the market system	88
4.5	New technology	89
4.6	Problems illustrated by some cases	90
4.7	High effective rates of discount	93
4.8	Difficulties in enforcing conservation measures and questions of social structure	94
4.9	Policies for influencing and improving conservation practices in the Third World	95
4.10	Provision of information and education	96
4.11	Appropriating greater gains nationally from conservation	96
4.12	Tourism as a means of appropriating gains from conservation	98
4.13	Improving the distribution of gains from conservation within LDCs	99
4.14	International aid and assistance, loans and trade	101
4.15	Global public good/externality considerations	103
4.16	Concluding observations on conservation in LDCs	105
5.	Preservation of wildlife and genetic diversity	109
5.1	Introduction	109
5.2	Total economic value and the valuation of wildlife and biodiversity	110
5.3	Managing wildlife as a mixed good: simple analytics,	113
5.4	Some economic consequences of interdependence between species	118
5.5	Criteria for deciding on species to save from extinction	121

5.6	Property rights in genetic material, GMOs, and the conservation of biodiversity	126
5.7	Globalisation, market extension and genetic diversity of domesticated animals and plants	128
5.8	Concluding comments	129
6.	Open-access, common-property and natural resource management	132
6.1	Types of property and general consequences	132
6.2	Open-access: economic failures and their consequences	135
6.3	Policies for managing open-access resources	140
6.4	Further discussion of features of open-access to resources and its regulation	143
6.5	Ranching and farming as means to overcome open-access problems and conserve species	146
6.6	Concluding comment	150
7.	Economics of conserving natural areas and valuation techniques	153
7.1	Introduction: nature and availability of natural areas	153
7.2	Benefits and uses of natural protected areas	155
7.3	An overview of approaches to estimating the economic value of non-marketed commodities	156
7.4	Travel cost method of estimating the value of a natural area	158
7.5	Contingent valuation of natural areas	163
7.6	Hedonic price valuation of natural areas	167
7.7	Some additional economic valuation techniques	169
7.8	Using total economic values for social choices about resource use	169
7.9	Back to some fundamentals of economic valuation	171
7.10	Government versus non-government provision of natural areas	173
7.11	Concluding comments	175
8.	Forestry, trees and conservation	179
8.1	/ Introduction: forest cover and uses	179
8.2.	Commercial forestry for timber production	181
8.3	Multiple purpose management of forests	186
8.4	Forests and trees in less developed countries	188
8.5	Economic policies, pollution, forests and trees	192
8.6	Forest plantations versus natural forests: a discussion	195
8.7	Concluding remarks	196

9. Agriculture and the environment	199
9.1 Introduction	199
9.2 Externalities and agriculture	200
9.2.1 Agricultural externalities on agriculture	200
9.2.2 Agricultural spillovers on non-agricultural sectors and interests	206
9.2.3 Spillovers from other sectors on agriculture	207
9.3 Sustainability of agricultural systems	208
9.4 The Green Revolution, organic agriculture, permaculture	211
9.5 Pest and disease control in agriculture.	216
9.6 Agriculture, biodiversity, trees and wildlife conservation	218
9.7 Genetically modified organisms in agriculture: economic and biodiversity issues	220
9.8 Concluding observations	222
10. Tourism, outdoor recreation and the natural environment	225
10.1 Introductory issues, dependence of tourism on the natural environment	225
10.2 Tourism destroys tourism and tourist assets	226
10.2.1 Congestion or crowding and tourism	227
10.2.2 Destruction of tourism resources by visitors	229
10.3 Tourism area cycle and more on the dynamics of tourism	231
10.4 Impact of pollution and environmental damage on tourism and benefits from pollution control	234
10.5 Tourism, conservation and the total economic value of a natural area and economic impact analysis	237
10.6 Sustainability, ecotourism and economics	239
10.7 Conflicts between tourists, variety in tourist areas, public finance issues and national gains	240
10.8 Concluding observations	241
11. Sustainable development and conservation	243
11.1 Background	243
11.2 Sustaining intergenerational economic welfare	244
11.3 Capital, natural resource conversion and human welfare: further considerations	248
11.4 Survival of the human species for as long as possible	251
11.5 Issues raised by the views of Daly and Georgescu-Roegen about sustainability	253

11.6	Resilience of production and economic systems and stationarity of their attributes	256
11.7	Cost-benefit analysis and sustainability	258
11.8	Sustainability of community	260
11.9	Sustaining biodiversity	261
11.10	Concluding remarks	263
12.	Population, economic growth, globalisation and conservation: a concluding perspective	267
12.1	Introduction	267
12.2	Global population levels: characteristics and projections	268
12.3	Environmental consequences of population growth and economic demands	269
12.4	Environmental Kuznets curves: do they provide grounds for environmental optimism?	270
12.5	Is economic globalisation favourable or unfavourable to environmental conservation?	273
12.6	Concluding observations	274
